

Clinical trial results:

A Phase IIIb, open, randomized study to evaluate non-inferiority of GSK Biologicals' measles-mumps-rubella-varicella vaccine versus co-administration of GSK Biologicals' Priorix™ and Varilrix™ in healthy children during their second year of life.

Summary

EudraCT number	2011-004485-15
Trial protocol	Outside EU/EEA
Global end of trial date	27 May 2010

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 October 2010
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 May 2010
Global end of trial reached?	Yes
Global end of trial date	27 May 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the non-inferiority of GSK Biologicals' combined measles-mumps-rubella-varicella (MeMuRu-Oka) vaccine to Priorix and Varilrix vaccines administered as concomitant, separate injections in terms of measles, mumps, rubella, and varicella zoster virus (VZV) seroconversion rates 42-56 days after vaccination

Protection of trial subjects:

The subjects were observed closely for at least 30 minutes following the administration of vaccine(s), with appropriate medical treatment readily available in case of a rare anaphylactic reaction.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 October 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Korea, Republic of: 474
Worldwide total number of subjects	474
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	474
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

During the screening the following steps occurred: check for inclusion/exclusion criteria, contraindications/precautions, medical history of the subjects and signing informed consent forms.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	MMRV Group

Arm description:

Subjects received one dose of MMRV vaccine at Day 0.

Arm type	Experimental
Investigational medicinal product name	Priorix-Tetra
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

One dose of MMRV vaccine was administered in the deltoid region of the left upper arm at Day 0.

Arm title	MMR+V Group
------------------	-------------

Arm description:

Subjects received one dose of MMR vaccine and one dose of V vaccine at Day 0.

Arm type	Active comparator
Investigational medicinal product name	Priorix™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

One dose of MMR vaccine was administered in the deltoid region of the left upper arm.

Investigational medicinal product name	Varilrix™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

One dose of varicella vaccine was administered in the deltoid region of the right upper arm at Day 0.

Number of subjects in period 1	MMRV Group	MMR+V Group
Started	313	161
Completed	307	159
Not completed	6	2
Consent withdrawn by subject	5	2
Migration from study area	1	-

Anti-Mumps (N=295; 154)	262	145		
Anti-Rubella (N=298; 157)	297	157		
Anti-VZV (N=283; 151)	280	151		

Statistical analyses

Statistical analysis title	Non-inferiority - vaccine response to anti-measles
Statistical analysis description:	
Non-inferiority of MMRV vaccine vs MMR and V administered as concomitant vaccine 42-56 days after vaccination at Day 0 in terms of anti-measles seroconversion rates. Non-inferiority with respect to seroconversion rates for measles 42-56 days after vaccination was concluded if the lower limit of the two-sided standardized asymptotic 95% confidence interval (CI) for the group difference (MMRV Group minus MMR+V Group) in seroconversion rate for anti-measles was above -10%.	
Comparison groups	MMRV Group v MMR+V Group

Number of subjects included in analysis	457
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	< 0.05 ^[1]
Method	Fisher exact
Parameter estimate	Difference in percentage
Point estimate	-1.36
Confidence interval	
level	95 %
sides	2-sided
lower limit	-3.77
upper limit	1.66
Variability estimate	Standard deviation

Notes:

[1] - The p-values for all reactogenicity comparisons were calculated using a two-sided Fisher Exact test.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious Adverse Events: entire study period (Day 0 to Day 43-57); Solicited local: During the 4-day (Days 0-3) post vaccination period; Unsolicited symptoms and solicited general symptoms: Within 43 day post vaccination period.

Adverse event reporting additional description:

The number of occurrences reported for solicited symptoms, adverse events, and serious adverse events were not available for posting. The number of subjects affected by each specific event was indicated as the number of occurrences.

Assessment type	Non-systematic

subjects affected / exposed	63 / 313 (20.13%)	25 / 161 (15.53%)	
occurrences (all)	63	25	
Nasopharyngitis			
subjects affected / exposed	31 / 313 (9.90%)	14 / 161 (8.70%)	
occurrences (all)	31	14	
Gastroenteritis			
subjects affected / exposed	28 / 313 (8.95%)	13 / 161 (8.07%)	
occurrences (all)	28	13	
Pharyngitis			
subjects affected / exposed	27 / 313 (8.63%)	10 / 161 (6.21%)	
occurrences (all)	27	10	
Bronchitis			
subjects affected / exposed	26 / 313 (8.31%)	11 / 161 (6.83%)	
occurrences (all)	26	11	
Bronchiolitis			
subjects affected / exposed	21 / 313 (6.71%)	11 / 161 (6.83%)	
occurrences (all)	21	11	
Pharyngotonsillitis			

subjects affected / exposed	21 / 313 (6.71%)	10 / 161 (6.21%)	
occurrences (all)	21	10	
Otitis media acute			
subjects affected / exposed	13 / 313 (4.15%)	9 / 161 (5.59%)	
occurrences (all)	13	9	

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
