

Clinical trial results:

A Two-Part, Open-Label, Single-Arm Phase 1/2 Study of Safety, Pharmacokinetics, and Efficacy of Telaprevir in Combination With Peginterferon alfa-2b and Ribavirin in Pediatric Subjects Aged 3 to 17 Infected With Genotype 1 Hepatitis C Virus

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Summary

EudraCT number	2011-004564-30

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000196-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 May 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 April 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

PART A

- To evaluate the short-term safety of telaprevir in combination with pegylated interferon (Peg-IFN) and ribavirin (RBV) (Peg-IFN/RBV) in treatment-naïve pediatric subjects without cirrhosis.
- To evaluate the pharmacokinetics (PK) and determine the appropriate dose of telaprevir in combination with Peg-IFN/RBV in treatment-naïve pediatric subjects without cirrhosis.

PART B

- To evaluate the safety of telaprevir in combination with Peg-IFN/RBV in treatment-naïve and peginterferon/RBV treatment-experienced pediatric subjects with or without cirrhosis.

Protection of trial subjects:

The study was conducted in accordance with the ethical principles stated in the Declaration of Helsinki and the International Conference on Harmonization (ICH) Guideline for Good Clinical Practice (GCP).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 January 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	United States: 28
Worldwide total number of subjects	42
EEA total number of subjects	14

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	25
Adolescents (12-17 years)	15
Adults (18-64 years)	2
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study was planned to be conducted in 2 parts (Part A and Part B), which would use separate groups of subjects. However, the study was terminated early (12 weeks after last dose of study drug in Part A) and Part B was not conducted.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 (13-17 Years): Telaprevir + Peg-IFN-alfa-2b + RBV

Arm description:

Subjects aged 13 to 17 years received telaprevir twice daily for 12 weeks either as a film coated tablet (15 milligram per kilogram [mg/kg] of body weight) or as a chewable tablet (14 mg/kg of body weight) in combination with pegylated interferon alfa 2b (Peg-IFN-alfa-2b) 60 microgram per meter square (mcg/m²) subcutaneous injection weekly and ribavirin (RBV) 200 mg capsules or 40 milligram per milliliter (mg/mL) solution orally twice daily with a maximum dose of 1200 mg per day. Peg-IFN-alfa-2b and RBV were administered for 24 weeks in subjects who achieved extended rapid virologic response (eRVR) or for 48 weeks in subjects who did not achieve eRVR. eRVR was defined as undetectable hepatitis C virus ribonucleic acid (HCV RNA) levels at Week 4 and Week 12.

Arm type	Experimental
Investigational medicinal product name	Telaprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Chewable tablet, Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Telaprevir twice daily for 12 weeks either as a film coated tablet (15 mg/kg of body weight) or as a chewable tablet (14 mg/kg of body weight).

Investigational medicinal product name	Peg-IFN-alfa-2b
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Oral solution
Routes of administration	Oral use

Dosage and administration details:

RBV 200 mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR.

Arm title	Cohort 2 (7-12 Years): Telaprevir + Peg-IFN-alfa-2b + RBV
------------------	---

Arm description:

Subjects aged 7 to 12 years received telaprevir twice daily for 12 weeks as a chewable tablet (16 mg/kg of body weight) in combination with Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly and RBV 200-mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day. Peg-IFN-alfa-2b and RBV were administered for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR. eRVR was defined as undetectable HCV RNA levels at Week 4 and Week 12.

Arm type	Experimental
Investigational medicinal product name	Telaprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Chewable tablet
Routes of administration	Oral use

Dosage and administration details:

Telaprevir twice daily for 12 weeks as a chewable tablet (16 mg/kg of body weight)

Investigational medicinal product name	Peg-IFN-alfa-2b
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Oral solution
Routes of administration	Oral use

Dosage and administration details:

RBV 200 mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR.

Arm title	Cohort 3 (3-6 Years): Telaprevir + Peg-IFN-alfa-2b + RBV
------------------	--

Arm description:

Subjects aged 3 to 6 years received telaprevir twice daily for 12 weeks as a chewable tablet (18 mg/kg of body weight) in combination with Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly and RBV 200-mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day. Peg-IFN-alfa-2b and RBV were administered for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR. eRVR was defined as undetectable HCV RNA levels at Week 4 and Week 12.

Arm type	Experimental
Investigational medicinal product name	Telaprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Chewable tablet
Routes of administration	Oral use

Dosage and administration details:

Telaprevir twice daily for 12 weeks as a chewable tablet (18 mg/kg of body weight)

Investigational medicinal product name	Peg-IFN-alfa-2b
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Oral solution
Routes of administration	Oral use

Dosage and administration details:

RBV 200 mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR.

Number of subjects in period 1	Cohort 1 (13-17 Years): Telaprevir + Peg-IFN-alfa-2b + RBV	Cohort 2 (7-12 Years): Telaprevir + Peg-IFN-alfa-2b + RBV	Cohort 3 (3-6 Years): Telaprevir + Peg-IFN-alfa-2b + RBV

Primary: Number of Subjects With Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects With Adverse Events (AEs) and Serious Adverse Events (SAEs) ^[1]
-----------------	---

End point description:

AE: any adverse change from the subject's baseline (pre-treatment) condition, including any adverse experience, abnormal recording or clinical laboratory assessment value which occurs during the course of the study, whether it is considered related to the study drug or not. An adverse event includes any newly occurring event or previous condition that has increased in severity or frequency since the administration of study drug. SAE: medical event or condition, which falls into any of the following categories, regardless of its relationship to the study drug: death, life threatening adverse experience, in-patient hospitalization/prolongation of hospitalization, persistent/significant disability or incapacity, congenital anomaly/birth defect, important medical event. "Study drug" includes all investigational agents administered during the course of the study. Safety set included all subjects who received at least 1 dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to Week 52

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No inferential statistics was planned for this endpoint.

End point values	Cohort 1 (13-17 Years): Telaprevir + Peg-IFN-alfa-2b + RBV	Cohort 2 (7-12 Years): Telaprevir + Peg-IFN-alfa-2b + RBV	Cohort 3 (3-6 Years): Telaprevir + Peg-IFN-alfa-2b + RBV

Secondary: Area Under the Plasma Concentration Versus Time Curve (AUC) of Telaprevir

End point title	Area Under the Plasma Concentration Versus Time Curve (AUC) of Telaprevir
-----------------	---

End point description:

AUC was measured for telaprevir only. AUC 0-t last was defined as the area under the concentration-time curve from the time of dosing to the last measurable concentration. AUC 0-12 hour (AUC 0-12h) was calculated by respecifying predose concentrations as 12 hour concentrations. AUC 0-24h was calculated as AUC 0-12h multiplied by 2. Dose adjusted AUC (AUC 0-24h_Adj) was calculated by multiplying AUC 0-24h by the dose adjustment factor to obtain projected exposures in subjects who were misdosed. Data were presented for AUC 0-t last, AUC 0-12h, AUC 0-24h, AUC 0-24h_Adj. PK population. Here 'Number of Subjects Analyzed' signifies those subjects who were evaluable for this outcome measure.

End point type	Secondary

Secondary: Elimination Half-Life (T1/2) of Telaprevir

End point title	Elimination Half-Life (T1/2) of Telaprevir
End point description:	
T1/2 was defined as the time required for the concentration or amount of drug in the body to be reduced by one-half. Half life was not calculated because the calculation required the slope of terminal elimination phase and the PK sampling was relatively sparse and did not yield a terminal elimination phase from which half-life can be accurately estimated.	
End point type	Secondary
End point timeframe:	
Cohort 1: Pre-dose and 0.5, 1.0, 2.0, 3.0, 4.0, 5.0, 6.0, and 8.0 hours post-dose on Day 7, Cohort 2: Pre-dose and 0.5, 2.0, 4.0, 5.0, 6.0, and 8.0 hours post-dose on Day 7, Cohort 3: Pre-dose and 1.5, 4.0, and 8.0 hours post-dose on Day 7	

End point values	Cohort 1 (13-17 Years): Telaprevir + Peg-IFN-alfa-2b + RBV	Cohort 2 (7-12 Years): Telaprevir + Peg-IFN-alfa-2b + RBV	Cohort 3 (3-6 Years): Telaprevir + Peg-IFN-alfa-2b + RBV	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	0 ^[6]	0 ^[7]	0 ^[8]	
Units: hours (h)				
arithmetic mean (standard deviation)	()	()	()	

Notes:

[6] - PK sampling sparse, did not yield terminal elimination phase from which half-life can be calculated.

[7] - PK sampling sparse, did not yield terminal elimination phase from which half-life can be calculated.

[8] - PK sampling sparse, did not yield terminal elimination phase from which half-life can be calculated.

Reporting groups

Reporting group title	Cohort 1 (13-17 Years): Telaprevir + Peg-IFN-alfa-2b + RBV
-----------------------	--

Reporting group description:

Subjects aged 13 to 17 years received telaprevir twice daily for 12 weeks either as a film coated tablet (15 mg/kg of body weight) or as a chewable tablet (14 mg/kg of body weight) in combination with Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly and RBV 200 mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day. Peg-IFN-alfa-2b and RBV were administered for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR. eRVR was defined as undetectable HCV RNA levels at Week 4 and Week 12.

Reporting group title	Cohort 2 (7-12 Years): Telaprevir + Peg-IFN-alfa-2b + RBV
-----------------------	---

Reporting group description:

Subjects aged 7 to 12 years received telaprevir twice daily for 12 weeks as a chewable tablet (16 mg/kg of body weight) in combination with Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly and RBV 200-mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day. Peg-IFN-alfa-2b and RBV were administered for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR. eRVR was defined as undetectable HCV RNA levels at Week 4 and Week 12.

Reporting group title	Cohort 3 (3-6 Years): Telaprevir + Peg-IFN-alfa-2b + RBV
-----------------------	--

Reporting group description:

Subjects aged 3 to 6 years received telaprevir twice daily for 12 weeks as a chewable tablet (18 mg/kg of body weight) in combination with Peg-IFN-alfa-2b 60 mcg/m² subcutaneous injection weekly and RBV 200-mg capsules or 40 mg/mL solution orally twice daily with a maximum dose of 1200 mg per day. Peg-IFN-alfa-2b and RBV were administered for 24 weeks in subjects who achieved eRVR or for 48 weeks in subjects who did not achieve eRVR. eRVR was defined as undetectable HCV RNA levels at Week 4 and Week 12.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 March 2012	<p>1) Clarification that subjects in Part A were to be without cirrhosis. 2) Number of subjects was changed from approximately 120 to at least 120, and the minimum number of subjects with prior peginterferon/RBV treatment was increased from 15 to 25. The number of subjects per age group in Part A was clarified to be at least 10 in the older age groups and at least 6 in the youngest age group. 3) Language was changed to specify that at least 30% of all subjects would be from each gender; that half of all subjects would be from the EU, US, or Canada; and that efforts would be made to include subjects from all races. 4) Clarification that the follow-up period would be 5 years from the last dose of study drug (instead of 5 years from the first dose of study drug). 5) Descriptions of informed consent and assent were simplified in anticipation of differences in local (country-specific) rules/regulations. Specifically, statements that assent would be for children older than 12 years were removed. 6) Information on study drug dosing was updated, including addition of language to state that dosing for telaprevir would be based on the subject's baseline weight, and that the dose for Peg-IFN and RBV would be adjusted using the subject's current weight at Week 24, if necessary. 7) Ferritin and serology tests for hepatitis C virus and hepatitis A virus were added to the list of assessments to be performed at screening and positive result for anti-hepatitis A virus immunoglobulin M antibody was made an exclusion. 8) Information on detection of liver disease at baseline was updated. It was clarified that results from recent (within 24 months of screening) liver biopsies, if available, would be collected. 9) An exclusion criterion was added for any disease of iron overload, including hemochromatosis, and diseases requiring repeat transfusions. 10) Clarification that a urine home pregnancy test kit would be provided when there were no scheduled study visits.</p>
21 June 2012	<p>1) Body weight less than 15 kg was made an exclusion criterion for both Part A and Part B of the study.</p> <p>2) Exclusions for screening laboratory values were modified to be consistent with regulatory requirements. Exclusions related to thyroid dysfunction were modified. A new exclusion criterion was added for subjects who were pregnant, breastfeeding, or planning to get pregnant during study drug administration or within 6 months after the last dose of RBV.</p> <p>3) "History of intercurrent illness (e.g., upper respiratory illness with fever) within 5 days prior to the first dose of study drug" was made an exclusion criterion.</p> <p>4) The exclusion criterion with respect to participation in other studies of investigational drugs was significantly modified, including types of studies, time of previous blood draws, and use of a protease inhibitor.</p> <p>5) Clarification that subjects in Part B could be with or without cirrhosis.</p> <p>6) The exclusion criterion on previous treatment experience was clarified to state that subjects in Part A could not have been previously treated with any approved or experimental treatment for hepatitis C.</p> <p>7) The PK blood sample at 12 hours postdose was deleted.</p> <p>8) The section on contraception was updated for consistency with regulatory guidance and for clarity.</p> <p>9) Clarification that telaprevir and RBV were to be taken with food within 30 minutes after eating a meal or snack that was not low fat.</p> <p>10) The recommendation that the chewable tablets could be crushed and taken with whole milk was removed due to new food testing results.</p> <p>11) Clarification that investigators were to evaluate subjects' HCV RNA results by Week 24 and inform subject parents/guardians of their total treatment duration.</p> <p>12) Clarification of scheduling of follow-up visits and assessments to be performed at these visits and futility rules.</p> <p>14) Canada was removed in the description of the study population because no sites were planned for this country.</p>

29 August 2012	<p>1) The allowance for an overnight visit the night before Day 7 was removed.</p> <p>2) A mandatory second visit during the screening period was added for laboratory draws (HCV genotype/subtype, HCV serology, human immunodeficiency virus serology, hepatitis A virus serology, hepatitis B virus serology and DNA and antinuclear antibody) for children in the 3- to 6-year-old and 7- to 12-year-old age groups. This was implemented to ensure that the maximum allowable blood volume drawn was not exceeded.</p> <p>3) References to the use of a breath alcohol test were removed from the document and replaced with a urine alcohol test. The drug and alcohol tests planned for the treatment period were deleted.</p> <p>4) The time points for ophthalmologic examinations planned for the treatment/follow-up periods were changed to align with the recommendations in the package insert for Peg-IFN.</p> <p>5) Exclusion criteria for low hemoglobin and for ophthalmologic disorders were clarified and made more specific.</p>
----------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was terminated early because it was determined that telaprevir/Peg-IFN/RBV regimen did not present a meaningful therapeutic treatment over existing interferon-free regimens and was unlikely to be used for subjects aged 3 to 17 years.

Notes:
