Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	10 December 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 July 2019
Global end of trial reached?	Yes
Global end of trial date	12 March 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the efficacy, safety, and tolerability of belimumab in adult patients with active lupus nephritis.

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 July 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 34
Country: Number of subjects enrolled	Belgium: 13
Country: Number of subjects enrolled	Brazil: 32
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	China: 79
Country: Number of subjects enrolled	Colombia: 2
Country: Number of subjects enrolled	Czech Republic: 2
Country: Number of subjects enrolled	France: 19
Country: Number of subjects enrolled	Germany: 16

Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Taiwan: 14
Country: Number of subjects enrolled	Thailand: 25
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	United States: 76

Worldwide total number of subjects	448
EEA total number of subjects	77

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	446
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a Phase 3, multi-center, multi-national, randomized, double-blind, placebo-controlled study that evaluated safety and efficacy of intravenous (IV) belimumab 10 milligrams per kilogram (mg/kg) plus standard of care (SoC) compared to placebo plus SoC in adult participants with active lupus nephritis. The study was conducted in 21 countries.

Pre-assignment

Screening details:

A total of 797 participants were screened for the study of which 448 participants were enrolled. The results presented are for the primary analysis (double blind treatment period)

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants were randomized to receive matching placebo IV plus SoC on Days 0 (Baseline), 14, 28 and then every 28 days thereafter through 100 Weeks with a final evaluation for the double-blind treatment period at Week 104. The randomization was stratified by their induction regimen (high dose corticosteroids [HDCS] plus Cyclophosphamide [CYC] versus [vs.] HDCS plus Mycophenolate Mofetil [MMF]) and race.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants were administered with Placebo intravenously (IV) along with standard of care (SoC) on Days 0, 14, 28, and then every 28 days thereafter through Week 100, with a final evaluation at Week 104.

Arm title	Belimumab 10 mg/kg
------------------	--------------------

Arm description:

Participants were randomized to receive Belimumab 10 mg/kg IV plus SoC on Days 0 (Baseline), 14, 28 and then every 28 days thereafter through 100 Weeks with a final evaluation for the double-blind treatment period at Week 104. The randomization was stratified by their induction regimen (HDCS plus CYC vs. HDCS plus MMF) and race.

Arm type	Experimental
Investigational medicinal product name	Belimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants were administered with Belimumab 10 milligrams per kilograms (mg/kg) IV along with SoC on Days 0, 14, 28, and then every 28 days thereafter through Week 100, with a final evaluation at Week 104.

Number of subjects in period 1	Placebo	Belimumab 10 mg/kg
Started	224	224
Completed	170	186
Not completed	54	38
Adverse event, serious fatal	5	6
Consent withdrawn by subject	26	19
Physician decision	11	5
Adverse event, non-fatal	5	1
Lost to follow-up	5	4
Lack of efficacy	2	1
Protocol deviation	-	2

Primary: Percentage of participants with primary efficacy renal response (PERR) at Week 104

End point title	Percentage of participants with primary efficacy renal response (PERR) at Week 104
End point description:	
PERR is defined as urinary protein creatinine ratio ≤ 0.7 , estimated glomerular filtration rate (eGFR) was not more than 20 percent (%) below the pre-flare value or ≥ 60 milliliters per minute per 1.73 square meter (mL/min/1.73m ²) and was not a treatment failure. Analysis was performed using a logistic regression model for the comparison between Belimumab and Placebo with covariates of induction regimen (CYC vs. MMF), race (Black vs. Non-Black), Baseline urine protein-creatinine ratio (uPCR) and Baseline eGFR. Modified Intent-to-treat (MITT) Population consisted of all randomized participants who received at least one dose of study treatment and were not in one of 2 sites excluded due to GCP compliance. Percentage of participants with PERR at Week 104 has been presented.

Secondary: Number of participants with time to death or renal related event

End point title	Number of participants with time to death or renal related event
-----------------	--

End point description:

Events are defined as the first event experienced among the following: death, progression to end stage renal disease, doubling of serum creatinine from Baseline, renal worsening or renal-related treatment failure. Participants who discontinued randomized treatment, withdrawn from the study, or are lost to follow-up were censored on the date of the event. Participants who completed the 104-week treatment period were censored at the Week 104 visit. Time to event is defined as event date minus treatment start date plus one. Analysis was performed using Cox proportional hazards model for the comparison between Belimumab and Placebo adjusting for induction regimen, race, baseline uPCR, and Baseline eGFR. Number of participants with time to death or renal related event up to Week 104 has been presented.

End point type	Secondary

Secondary: Percentage of participants with ordinal renal response (ORR) at Week 104

End point title	Percentage of participants with ordinal renal response (ORR) at Week 104
-----------------	--

End point description:

ORR is defined with respect to reproducible responses that included CRR, partial RR (PRR) and non responder. CRR is reported when uPCR was <0.5, eGFR was not more than 10% below pre-flare GFR or within normal range and not a treatment failure. PRR is $\geq 50\%$ decrease from Baseline in uPCR and one of the following: value <1 if Baseline ≤ 3 , or value <3 if the Baseline was > 3 , eGFR not more than 10% below Baseline GFR or within normal range and not a treatment failure and not a CRR. Non responder is reported when neither CRR nor PRR criteria was met. Percentage of participants reporting CRR, PRR and non responders at Week 104 has been presented.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs and SAEs were reported from start of treatment until Week 104. All AEs are included regardless of time since last investigational product (IP) treatment.

Adverse event reporting additional description:

AEs and SAEs were collected for Safety Population.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 January 2012	Amendment 01: Applied to all countries and sites. The protocol was modified to clarify exclusion criteria, concurrent medications and standard of care, addition of anti-malarials, and use of corticosteroids. There were also changes to prohibited medications and non-drug therapies, live vaccines, screening procedures, and the double-blind treatment period and study calendar. An open-label extension replaced the continuation phase. An exploratory analysis of urinary biomarkers related to lupus nephritis was added. Clarifications were made to the withdrawal of study treatment and adverse event reporting sections. The endpoints and statistical analysis sections were updated to reflect changes made in other sections of the protocol.
08 March 2012	Amendment 02: Applied to all countries and sites. The protocol was modified to require participants to remain under clinical supervision for 3 hours after completion of the first 2 infusions. Results for biological markers measured by fluorescence activated cell sorting (FACS) were added to the list of laboratory results not provided to study sites. Language describing participant un-blinding in the protocol was amended. Language regarding the body weight used for dose calculation was corrected.
11 February 2014	Amendment 03: Applied to all countries and sites. In this amendment the protocol was modified to expand Hepatitis B serology testing, to exclude participants who tested positive according to the criteria specified, and to specify hepatitis C screening. Screening and induction initiation windows were extended and details were added for eligibility criteria pertaining to various laboratory parameters. Clarification was added for screening for active or latent infections. A belimumab Benefit and Risk Assessment, and a preliminary assessment specific to the lupus nephritis participant population were added. Information on non-acute delayed type hypersensitivity reaction and symptoms was added. Instructions for monitoring and managing cases of Grade 4 immunoglobulin G (IgG) were clarified. The concurrent medication section was modified. Steroid rescue for non-renal systemic lupus erythematosus (SLE) disease activity and non-SLE disease activity was revised. Timing of pharmacokinetic sampling in participants who withdrew from the study was clarified. A new section was added to clarify management of participants with liver chemistry events during the study. Reason for treatment withdrawal was modified. Participant un-blinding information was updated. The adverse events section was modified for consistency. Progressive multifocal leukoencephalopathy (PML) text was updated. The Independent Data Monitoring Committee (IDMC) was also to monitor all serious adverse events (SAEs). New appendices were added to provide the questionnaires for the possible suicidality-related history questionnaire (PSRHQ), the possible suicidality-related questionnaire (PSRQ), and the Country-specific Requirements for Thailand.
16 March 2015	Amendment 05: Applied in all countries and sites, except for those with a local version amendment. Eligibility criteria, exclusion criteria, and relevant sections were modified to allow patients who initiated an induction recently to be considered for enrollment. The Risk-Benefit and concomitant medications sections were updated. A urine pregnancy test was added at the 8-week follow-up visit, and any pregnancy that occurred through 16 weeks following the last dose of IP was to be reported. The section on liver safety evaluation was replaced for consistency with GlaxoSmithKline (GSK) standards. Additional Hepatitis B monitoring was added.

25 April 2017	Amendment 06: Applied in all countries and sites, except for those with a local version amendment. The renal response definition used for key efficacy endpoints evaluation was modified. Calculated glomerular filtration rate (GFR) was changed to estimated GFR to be used for all renal function evaluations. Time to first renal flare was added as a major secondary efficacy endpoint. Clarification was added regarding timing of the renal biopsy. Clarifications regarding the target sample size and sample size calculations were added. Contraception requirements were updated. The Benefit-Risk section text was updated in line with current belimumab safety information. The concomitant medications section was updated to clarify concurrent medication rules applicable to the double-blind period. At the request of the IDMC the requirement to review Grade 4 IgG reductions on an expedited basis was removed. The Van Elteren test was replaced with a Rank analysis of covariance (ANCOVA) for the primary and major secondary endpoints analysis. Updates were also made to how missing values will be handled, how the sensitivity analyses will be performed, and additional other efficacy endpoints were defined. The rate of renal flare from Week 24, time to first renal flare from Week 52, and the rate of renal flare from Week 52 were also added as other efficacy endpoints and for some of the other efficacy endpoints, clarification text has been added.
24 January 2019	Amendment 07: Applied in all countries and sites, except for those with a local version amendment. In this amendment the primary endpoint and the time to renal flare at Week 24 endpoint were changed. The testing hierarchy and the analysis methodology of the major secondary endpoints was revised accordingly. Power calculations were added to the sample size section. A subgroup for Baseline renal biopsy class was added. Other efficacy endpoints were updated to be consistent with and supportive of the revised testing hierarchy. Endpoints inadvertently omitted were added to other efficacy endpoints. The timeframe for pregnancy reporting was updated to sponsor requirements.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
