Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 November 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 May 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- 1) To demonstrate the efficacy of tofacitinib as maintenance therapy in subjects with ulcerative colitis (UC).
- 2) To evaluate the safety and tolerability of tofacitinib as maintenance therapy in subjects with UC.
- 3) To evaluate the efficacy of tofacitinib maintenance therapy in achieving mucosal healing in subjects with UC.
- 4) To evaluate the tofacitinib pharmacokinetic exposure during maintenance therapy in subjects with UC.
- 5) To evaluate the effect of tofacitinib as maintenance therapy on quality-of-life in subjects with UC.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 July 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 13
Country: Number of subjects enrolled	Belgium: 30
Country: Number of subjects enrolled	Czech Republic: 7
Country: Number of subjects enrolled	Germany: 25

Worldwide total number of subjects	593
EEA total number of subjects	261

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	545
From 65 to 84 years	48
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Study subjects were enrolled from 196 investigational sites in Asia, Australia, Europe, North America, and South America. Overall, 593 subjects were randomized to study treatment. Study was conducted between 20 July 2012 and 27 May 2016.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Tofacitinib 5 mg BID

Arm description:

Subjects received tofacitinib 5 milligram (mg) tablets, orally, twice daily (BID) for 53 weeks of double blind treatment period. Subjects were followed-up for 4 weeks if withdrew from study participation.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tofacitinib 5 mg tablets, orally, BID for 53 weeks of double blind treatment period.

Arm title	Tofacitinib 10 mg BID
------------------	-----------------------

Arm description:

Subjects received tofacitinib 10 mg tablets, orally, BID for 53 weeks of double blind treatment period. Subjects were followed-up for 4 weeks if withdrew from study participation.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tofacitinib 10 mg tablets, orally, BID for 53 weeks of double blind treatment period.

Arm title	Placebo
------------------	---------

Arm description:

Subjects received tofacitinib matched placebo tablets, orally, BID for 53 weeks of double blind treatment period. Subjects were followed-up for 4 weeks if withdrew from study participation.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tofacitinib matched Placebo, orally, BID for 53 weeks of double blind treatment period.

Number of subjects in period 1	Tofacitinib 5 mg BID	Tofacitinib 10 mg BID	Placebo
Started	198	197	198
Treated	198	196	198
Completed	111	126	53
Not completed	87	71	145
Consent withdrawn by subject	6	3	5
Adverse event, non-fatal	5	9	7
Randomized but not treated	-	1	-
Pregnancy	1	1	-
Unspecified	2	1	-
Lost to follow-up	3	2	1
Lack of efficacy	70	53	132
Protocol deviation	-	1	-

Primary: Percentage of Subjects in Remission at Week 52

End point title	Percentage of Subjects in Remission at Week 52
End point description: Remission in subjects was defined by a total mayo score of 2 points or lower, with no individual subscore exceeding 1 point and a rectal bleeding subscore of 0. Mayo score was an instrument designed to measure disease activity of ulcerative colitis (UC). It consisted of 4 subscores: stool frequency, rectal bleeding, findings of centrally read flexible sigmoidoscopy and physician global assessment (PGA), each subscore graded from 0 to 3 with higher scores indicating higher disease severity. These subscores were summed up to give a total score range of 0 to 12 where higher score indicating higher disease severity. Full analysis set (FAS) included all randomized subjects.

Secondary: Percentage of Subjects in Sustained Steroid-Free Remission (Defined as Being in Remission and Steroid-Free at Both Week 24 and 52), Among Subjects With Remission at Baseline

End point title	Percentage of Subjects in Sustained Steroid-Free Remission (Defined as Being in Remission and Steroid-Free at Both Week 24 and 52), Among Subjects With Remission at Baseline
-----------------	---

End point description:

Sustained steroid-free remission was defined by being in remission and steroid-free at both Week 24 and Week 52. Steroid-free remission was defined by being in remission, in addition to no requirement of any treatment with steroid for at least 4 weeks prior to the visit. Remission was defined by a total mayo score of 2 points or lower, with no individual subscore exceeding 1 point and a rectal bleeding subscore of 0. Mayo score was an instrument designed to measure disease activity of UC. It consisted of 4 subscores: stool frequency, rectal bleeding, findings of centrally read flexible sigmoidoscopy and PGA, each graded from 0 to 3 with higher scores indicating higher disease severity. These subscores were summed up to give a total score range of 0 to 12, where higher scores indicating higher disease severity. FAS included all randomized subjects. Here "number of subjects analyzed" signifies subjects evaluable for this endpoint.

Secondary: Percentage of Subjects With Sustained Mucosal Healing, Among Subjects With Mucosal Healing at Baseline

End point title	Percentage of Subjects With Sustained Mucosal Healing, Among Subjects With Mucosal Healing at Baseline
-----------------	--

End point description:

Sustained mucosal healing in subjects was defined by achieving mayo endoscopic subscore of 0 or 1 at both Week 24 and Week 52. The mayo endoscopic subscore consisted of the findings of centrally read flexible sigmoidoscopy, graded from 0 to 3 with higher scores indicating higher disease severity. FAS included all randomized subjects. Here "number of subjects analyzed" signifies those subjects who were evaluable for this endpoint.

Secondary: Percentage of Subjects With Clinical Response at Week 24 and 52

End point title	Percentage of Subjects With Clinical Response at Week 24 and 52
-----------------	---

End point description:

Clinical response was defined by a decrease from induction study (A3921094 [NCT01465763] or A3921095 [NCT01458951]) baseline in Mayo score of at least 3 points and at least 30%, with an accompanying decrease in the rectal bleeding subscore of at least 1 point, or an absolute rectal bleeding subscore of 0 or 1. Mayo score was an instrument designed to measure disease activity of UC. It consisted of 4 subscores: stool frequency, rectal bleeding, findings of centrally read flexible sigmoidoscopy and PGA, each graded from 0 to 3 with higher scores indicating higher disease severity. These subscores were summed up to give a total score range of 0 to 12, where higher scores indicating higher disease severity. Percentage of subjects with clinical response at Week 24 and 52 have been reported in this endpoint. FAS included all randomized subjects.

Secondary: Percentage of Subjects in Sustained Symptomatic Remission

End point title	Percentage of Subjects in Sustained Symptomatic Remission
-----------------	---

End point description:

Sustained symptomatic remission in subjects was defined as being in symptomatic remission at both Week 24 and Week 52. Symptomatic remission was defined as a total Mayo score of 2 points or lower, with no individual subscore exceeding 1 point, and 0 subscore for both rectal bleeding and stool frequency. Mayo score was an instrument designed to measure disease activity of UC. It consisted of 4

subscores: stool frequency, rectal bleeding, findings of centrally read flexible sigmoidoscopy and PGA, each graded from 0 to 3 with higher scores indicating higher disease severity. These subscores were summed up to give a total score range of 0 to 12, where higher scores indicating higher disease severity. FAS included all randomized subjects.

Secondary: Percentage of Subjects in Sustained Steroid-Free Remission, Among Subjects Receiving Steroids at Baseline

End point title	Percentage of Subjects in Sustained Steroid-Free Remission, Among Subjects Receiving Steroids at Baseline
-----------------	---

End point description:

Sustained steroid-free remission was defined by being in remission and steroid-free at both Week 24 and Week 52. Steroid-free remission was defined by being in remission, in addition to no requirement of

any treatment with steroid for at least 4 weeks prior to the visit. Remission was defined by a total mayo score of 2 points or lower, with no individual subscore exceeding 1 point and a rectal bleeding subscore of 0. Mayo score was an instrument designed to measure disease activity of UC. It consisted of 4 subscores: stool frequency, rectal bleeding, findings of centrally read flexible sigmoidoscopy and PGA, each graded from 0 to 3 with higher scores indicating higher disease severity. These subscores were summed up to give a total score range of 0 to 12, where higher scores indicating higher disease severity. FAS included all randomized subjects. Here "number of subjects analyzed" signifies subjects evaluable for this endpoint.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to Week 57

Adverse event reporting additional description:

Same event may appear as both an adverse event (AE) and a serious adverse event (SAE). However, what is presented are distinct events. An event may be categorized as serious in one subject and as non-serious in another, or a subject may have experienced both a serious and non-serious event. Safety analysis included all treated subjects.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 September 2012	This amendment updated standard Pfizer protocol text, including safety language in various sections, including Administration, Reproductive Status of Female Subjects, and AE Reporting. In addition, this amendment included updates to the summary of safety section for tofacitinib to be consistent with the revised investigator's brochure (IB), secondary study endpoints, schedule of activities flowchart, and prohibited medication list. Guidelines and clarifications were included which provided instruction for dosage adjustment, temporary withholding of study drug, and scheduled study visit procedures.
20 April 2016	This administrative amendment clarified the multiple comparison procedure stated in Section 9.2.2 so that it guaranteed the control of the family-wise Type I error rate at 0.05.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No
