

## Clinical trial results:

### An Open-label, Single-arm Study to Assess the Safety and Tolerability of Cinacalcet HCl in Addition to Standard of Care in Pediatric Subjects Age 28 Days to < 6 years With Chronic Kidney Disease and Secondary Hyperparathyroidism Receiving Dialysis

#### Summary

EudraCT number	2011-004618-40
Trial protocol	DE NL PL HU CZ IT SK BE Outside EU/EEA
Global end of trial date	03 June 2016

#### Results information

Result version number	v1 (current)
This version publication date	18 December 2016
First version publication date	18 December 2016

#### Trial information

##### Trial identification

Sponsor protocol code	20110100
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01439867
WHO universal trial number (UTN)	-

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 June 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 June 2016
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To characterize corrected serum calcium levels on treatment with cinacalcet in pediatric subjects with secondary hyperparathyroidism.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) and applicable Food and Drug Administration (FDA) regulations/guidelines set forth in 21 CFR Parts 11, 50, 54, 56, and 312.

The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Before a subject's participation in the clinical study, the investigator obtained written assent from the subject and/or informed consent from the subject's legally acceptable representative after adequate explanation of the aims, methods, anticipated benefits, and potential hazards of the study and before any protocol-specific screening procedures or any investigational product was administered.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 June 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Czech Republic: 1
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Slovakia: 1
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	18
EEA total number of subjects	9

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	3
Children (2-11 years)	15
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 14 study centers in Czech Republic (1 site), France (1 site), Germany (1 site), Italy (1 site), Slovakia (1 site), Poland (3 sites), and the US (6 sites). The first subject was enrolled on 22 June 2012, and the last subject completed the study on 03 June 2016.

### Pre-assignment

Screening details:

Patients between the ages of 28 days to < 6 years of age, who had chronic kidney disease and secondary hyperparathyroidism and were undergoing either hemodialysis or peritoneal dialysis at the time of screening (subjects 6 months or older should have been receiving dialysis for  $\geq 1$  month).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1

Arm description:

Cohort 1 consists of subjects enrolled before the partial clinical hold. Participants received cinacalcet administered daily for 24 weeks. The starting dose was 0.25 mg/kg (based on dry weight) with dose adjustments and withholding based on plasma iPTH, corrected serum calcium levels obtained monthly, and adverse signs and symptoms; the maximum allowed daily dose was 4.2 mg/kg.

Arm type	Experimental
Investigational medicinal product name	Cinacalcet hydrochloride
Investigational medicinal product code	AMG 073
Other name	Sensipar®, Mimpara®
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Cinacalcet was provided as 5-mg capsules that were opened, and the contents were either sprinkled on soft food or suspended into a sucrose syrup to create a liquid suspension for administration. All doses were administered with food or shortly after a meal at the same time daily.

<b>Arm title</b>	Cohort 2
------------------	----------

Arm description:

Cohort 2 consists of subjects enrolled after the partial clinical hold. Participants received cinacalcet administered daily for 24 weeks. The starting dose was 0.20 mg/kg (based on dry weight) with dose adjustments and withholding based on plasma iPTH, corrected serum calcium levels obtained monthly, weekly monitoring of ionized calcium levels, and adverse signs and symptoms; the maximum allowed daily dose was 2.5 mg/kg/day or 60 mg, whichever was lower.

Arm type	Experimental
Investigational medicinal product name	Cinacalcet hydrochloride
Investigational medicinal product code	AMG 073
Other name	Sensipar®, Mimpara®
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Cinacalcet was provided as 5-mg capsules that were opened, and the contents were either sprinkled on soft food or suspended into a sucrose syrup to create a liquid suspension for administration. All doses were administered with food or shortly after a meal at the same time daily.

<b>Number of subjects in period 1</b>	Cohort 1	Cohort 2
Started	8	10
Received treatment	7	10
Completed	2	2
Not completed	6	8
Consent withdrawn by subject	1	2

Subject analysis set description: The full analysis set included all enrolled subjects who had at least 1 post-baseline assessment.	
Subject analysis set title	Calcium Analysis Set
Subject analysis set type	Sub-group analysis
Subject analysis set description: The calcium analysis set includes all subjects who received at least one dose of study drug and had at least one measured serum calcium value while on study drug.	

### Primary: Percentage of participants with Hypocalcemia

End point title	Percentage of participants with Hypocalcemia <sup>[1]</sup>
End point description: Hypocalcemia was defined as corrected serum calcium levels < 9.0 mg/dL (2.25 mmol/L) for participants aged 28 days to < 2 years, and < 8.4 mg/dL (2.1 mmol/L) for participants aged ≥ 2 years to < 6 years at any time during the study. The analysis included subjects who received at least 1 dose of cinacalcet and had at least 1 measured serum calcium value while on cinacalcet.	
End point type	Primary
End point timeframe: 26 weeks	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: There was no formal statistical testing for this study.	

End point values	Cohort 1	Cohort 2	Calcium Analysis Set

Hypophosphataemia			
subjects affected / exposed	0 / 7 (0.00%)	1 / 10 (10.00%)	1 / 17 (5.88%)
occurrences (all)	0	2	2

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 March 2014	•Weekly monitoring of ionized calcium with a point-of-care device was added; required prior to weekly IP dispensing to the patient •Criteria for dose adjustments were added to the protocol based on ionized calcium values •Daily cinacalcet compliance monitoring with an electronic diary by the patient/parent/legal guardian was added. •Cinacalcet treatment period was changed to 24 weeks with a 2-week follow-up period for a total of 26 weeks on study •SAE reporting language was modified. Also the time period for AE/SAE collection was modified to 14 days following the last dose of IP •Updated miscellaneous study conduct procedures
21 June 2014	•Aligned the dosing schema being used amongst all studies within the cinacalcet pediatric program. The dosing algorithm in Amendment 2 assigned a dose of cinacalcet across a weight band of several kilograms versus the previous dose assignments based on precise weight increments. The assignment of doses across a weight band in regular increments (eg, 1, 2.5, 5, 7.5, 10 mg, etc) allowed for greater convenience and simplicity for the care-giver administering the drug during the course of the trial. •Changes were made to the study procedures and schedule of clinical laboratory assessments to accommodate the requirements of the revised dosing algorithm.
05 November 2014	•Incorporated language regarding adynamic bone disease •Updated language regarding study procedures for consistency within the cinacalcet pediatric program
21 July 2015	•Revised the dose adjustments section for clarity. •Clarified the ionized calcium value on Day 1 must be $\geq 1.13$ mmol/L for subjects $< 2$ years of age and $\geq 1.05$ mmol/L for subjects $\geq 2$ years of age prior to initiation of treatment. •Clarified that, with the exception of the predose PK sample on day 1, PK samples are only collected if the subject has been receiving IP prior to the visit. •Changed "Screening serum calcium" to be "Screening corrected calcium" for eligibility criterion 4.1.4. •Changed number of screening attempts permitted from a maximum of 4 to a maximum of 3. •Clarified that the eDiary will capture the number of capsules or milliliters suspension administered. •Added ionized calcium at week 1 in the Schedule of Assessments. Changed the endpoints to match wording provided in a regulatory response from the US FDA. •Added text to specify that subjects who complete this 26-week study may be eligible to participate in an extension study (Study 20140159). •Clarified that Amgen must be contacted prior to dispensing new bottle(s) of IP in the event unused medication or empty bottles have been permanently misplaced.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
07 February 2013	The study and enrollment was placed on partial clinical hold by Amgen and the FDA in February 2013 following the death of a patient in another cinacalcet pediatric study. Following the death, the IRB recommended changes to all of the cinacalcet pediatric studies, which resulted in changes to the protocol; Study 20110100 was restarted in April 2014 following these changes.	23 April 2014
