

## Clinical trial results:

**Randomised, double-blind, placebo-controlled, 6 treatment, 4 period, incomplete cross-over trial to characterise the 24-hour lung function profiles of tiotropium + olodaterol fixed dose combination (2.5/5 µg, 5/5 µg), tiotropium (2.5 µg, 5 µg) and olodaterol (5 µg) (oral inhalation, delivered by the Respimat® Inhaler) after 6 weeks once daily treatment in patients with Chronic Obstructive Pulmonary Disease (COPD)**

### Summary

EudraCT number	2011-004710-42
Trial protocol	DE NL DK BE HU
Global end of trial date	12 August 2013

### Results information

Result version number	v1 (current)
This version publication date	20 June 2016
First version publication date	16 July 2015

### Trial information

#### Trial identification

Sponsor protocol code	1237.20
-----------------------	---------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01559116
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 September 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 July 2013
Global end of trial reached?	Yes
Global end of trial date	12 August 2013
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the trial is to determine the 24-hour FEV1-time profile of tiotropium + olodaterol FDC (2.5/5 µg, 5/5 µg), administered once daily by the RESPIMAT Inhaler, after 6 weeks of treatment.

Protection of trial subjects:

An independent DMC was formed to ensure patient safety and was to make recommendations to the sponsor with regard to the continuation and potential modification or termination of the trial.

All patients were informed that they were free to withdraw their consent at any time during the study without penalty or prejudice. The patients were informed that their personal trial related data would be considered confidential and used by BI in accordance with the local data protection laws.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 March 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 40
Country: Number of subjects enrolled	Belgium: 27
Country: Number of subjects enrolled	Denmark: 23
Country: Number of subjects enrolled	Germany: 94
Country: Number of subjects enrolled	Hungary: 21
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	United States: 47
Worldwide total number of subjects	259
EEA total number of subjects	205

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	172
From 65 to 84 years	87
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended specialist sites which would then ensure that they (the subjects) met all implemented inclusion/exclusion criteria. Subjects were not to be randomised to trial treatment if any one of the entry criteria were violated.

### Period 1

Period 1 title	Overall trial
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

### Arms

<b>Arm title</b>	All subjects
------------------	--------------

Arm description:

All enrolled subject were included.

Arm type	all treatments combined subjects
Investigational medicinal product name	Tiotropium (Tio), Olodaterol (Olo), Tio+Olo, placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Randomised, double-blind, placebo-controlled, 6 treatment, 4 period, incomplete cross-over trial to characterise the 24-hour lung function profiles of tiotropium + olodaterol fixed dose combination (2.5/5 µg, 5/5 µg), tiotropium (2.5 µg, 5 µg) and olodaterol (5 µg) (oral inhalation, delivered by the Respimat® Inhaler) after 6 weeks once daily treatment in patients with Chronic Obstructive Pulmonary Disease (COPD)

<b>Number of subjects in period 1<sup>[1]</sup></b>	All subjects
Started	219
Completed	193
Not completed	26
Consent withdrawn by subject	4
Adverse event, non-fatal	10
'Other than stated above '	9
Lost to follow-up	1
Lack of efficacy	1
Protocol deviation	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one of the trial medication. Thus, even though 259 subjects were enrolled in the trial, 40 subjects were not treated. Therefore only 219 subjects were reported in the baseline period.

## Period 2

Period 2 title	Overall trial (treatment period)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

## Arms

Are arms mutually exclusive?	No

## Baseline characteristics

### Reporting groups

Reporting group title	Overall trial
-----------------------	---------------

Reporting group description:

Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one of the trial medication. Therefore 219 subjects were in baseline characteristic reporting group.

Reporting group values	Overall trial	Total	
Number of subjects	219	219	
Age categorical Units: Subjects			
Age continuous Units: years arithmetic mean standard deviation	61.1 ± 7.7	-	
Gender categorical Units: Subjects			
Female	90	90	
Male	129	129	

## End points

### End points reporting groups

## Statistical analyses

Statistical analysis title	T+O 5/5 vs placebo
----------------------------	--------------------

Statistical analysis description:

The adjusted mean and standard error (SE) are obtained from fitting a mixed effect model repeated measures (MMRM) including fixed effects of treatment and period; period baseline and patient baseline as covariates; patient as a random effect; compound symmetry covariance structure for within-patient variation and Kenward–Roger approximation of denominator degrees of freedom.

The adjusted mean difference is calculated as T+O 5/5 minus Placebo.

Comparison groups	Placebo v T+O 5/5 µg
Number of subjects included in analysis	270
Analysis specification	Pre-specified
Analysis type	superiority <sup>[7]</sup>
P-value	< 0.0001

### Secondary: Peak (0-3h) FVC Response [L] After 6 Weeks Treatment

End point title	Peak (0-3h) FVC Response [L] After 6 Weeks Treatment
-----------------	--

End point description:

Peak (0-3h) Forced Vital Capacity (FVC) responses.

Peak was defined as the maximum value measured within the first 3 h post dosing and response was defined as the change from patient baseline.

PFT time schedule:

At Visits 2, 4, 6, 8: pre-dose PFT: 30 mins prior to inhalation of dose of study medication; post-dose PFT: 30 min, 1, 2 and 3 h post-dose.

At Visits 3, 5, 7, 9: pre-dose PFT: 30 mins prior to inhalation of dose of study medication; post-dose PFT: 30 min, 1, 2, 3, 4, 6, 8, 10, 12, 22, 23 h and 23h 50 min post-dose.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 March 2012	Additional guidance was provided regarding individual withdrawal criteria, and regarding medication restrictions. It was specified that adjudication was to be carried out for all SAEs (rather than only fatal events), and that clinically significant laboratory values were to be entered as AEs. Modifications were introduced regarding the time points of vital sign acquisition and regarding the pre-dose time window for PFT measurements. Administrative changes, corrections, and further clarifications were introduced.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
