

## Clinical trial results:

**Sequential, two-period study to assess the pharmacokinetics, safety & tolerability of single and multiple oral doses of AFQ056 in patients with FXS (Fragile X syndrome) aged 5-11 years (Cohort 1) and 3-4 years (Cohort 2)**

### Summary

EudraCT number	2011-004867-65
Trial protocol	Outside EU/EEA ES
Global end of trial date	16 October 2013

### Results information

Result version number	v1 (current)
This version publication date	13 July 2016
First version publication date	23 July 2015

### Trial information

#### Trial identification

Sponsor protocol code	CAFQ056B2154
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01482143
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001003-PIP01-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 October 2013
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	16 October 2013
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to assess the pharmacokinetics of single and multiple oral AFQ056 doses in patients with Fragile X Syndrome (FXS) aged 5-11 years (cohort 1) and 3-4 years if included in the study (cohort 2)

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 March 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United States: 17
Worldwide total number of subjects	21
EEA total number of subjects	4

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	21
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

## Subject disposition

### Recruitment

Recruitment details:

A total of twelve patients with FXS aged 5-11 years inclusive were enrolled to cohort 1. As the results from cohort 1 allowed the study to progress to cohort 2, an additional nine patients aged 3-4 years inclusive were recruited.

### Pre-assignment

Screening details:

Patient selection was established by checking through all inclusion/exclusion criteria at screening and first baseline visit.

### Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1-Treatment Period 1

Arm description:

Cohort 1 included children in the age group of 5 to 11 years

Arm type	Experimental
Investigational medicinal product name	AFQ056
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Single dose of 15 mg (10 mg/ml oral suspension in water) administered to the patients via a syringe. Saccharin sodium as a sweetener and tutti-frutti aroma were added to improve the taste.

<b>Arm title</b>	Cohort 2-Treatment Period 1
------------------	-----------------------------

Arm description:

Cohort 2 included children in the age group of 3 to 4 years

Arm type	Experimental
Investigational medicinal product name	AFQ056
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Single dose of 15 mg (10 mg/ml oral suspension in water) administered to the patients via a syringe. Saccharin sodium as a sweetener and tutti-frutti aroma were added to improve the taste.

Number of subjects in period 1	Cohort 1-Treatment Period 1	Cohort 2-Treatment Period 1
Started	12	9
Completed	12	9

## Period 2

Period 2 title	Treatment Period 2
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1-Treatment Period 2

Arm description:

Cohort 1 included children in the age group of 5 to 11 years

Arm type	Experimental
Investigational medicinal product name	AFQ056
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Day 1 to Day 7: multiple doses twice daily; 50 mg, 100 mg, or 1.25 mg/kg (10 mg/ml oral suspension in water) administered to the patients via a syringe. Doses were individualized based on the results obtained in period 1. Saccharin sodium as a sweetener and tutti-frutti aroma were added to improve the taste.

If the dose normalized C<sub>max</sub> and the dose normalized AUC<sub>inf</sub> from the 15 mg dose of period 1 for the individuals did not exceed the 90th percentile of the over all population (adults and adolescents), then the exposures from the 15 mg dose in period 1 guided the selection of doses for period 2 for each individual. If the dose normalized C<sub>max</sub> and the dose normalized AUC<sub>inf</sub> of the subjects from the 15 mg dose of period 1 fell above the 90th percentile, then mg/kg dosing was implemented instead of fixed dosing in period 2 for these subjects.

<b>Arm title</b>	Cohort 2-Treatment Period 2
------------------	-----------------------------

Arm description:

Cohort 2 included children in the age group of 3 to 4 years

Arm type	Experimental
Investigational medicinal product name	AFQ056
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Day 1 to Day 8: multiple doses twice daily (b.i.d.) 50 mg, 100 mg, or 1.25 mg/kg (10 mg/ml oral suspension in water) administered to the patients via a syringe. Doses were individualized and up-titrated based on the results obtained in period 1. Up-titration as follows: starting dose of 25 mg b.i.d. and daily increments of 25 mg up to the assigned target dose.

If the dose normalized C<sub>max</sub> and the dose normalized AUC<sub>inf</sub> from the 15 mg dose of period 1 for the

individuals did not exceed the 90th percentile of the over all population (adults and adolescents), then the exposures from the 15 mg dose in period 1 guided the selection of doses for period 2 for each individual. If the dose normalized C<sub>max</sub> and the dose normalized AUC<sub>inf</sub> of the subjects from the 15 mg dose of period 1 fell above the 90th percentile, then mg/kg dosing was implemented instead of fixed dosing in period 2 for these subjects.

<b>Number of subjects in period 2</b>	Cohort 1-Treatment Period 2	Cohort 2-Treatment Period 2
Started	12	9
Completed	12	9

## Baseline characteristics

### Reporting groups

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 November 2011	<p>This amendment introduced the following changes:</p> <p>The additional safety monitoring of study patients on days 2-6 (period 2) in case when the study medication is administered at patient's home by the patient's caregiver. For these days a daily telephone call was recommended to monitor for the potential AEs and safety issues. Initially planned two visits per day in the study center for the study drug administration were considered too stressful for the patients and considering the safety profile of AFQ056 it was judged that the daily telephone call was an appropriate measure to monitor for the safety of the study patients. In addition the meal restriction section was rewritten to provide more flexibility to the patients regarding the meal times on period 2.</p> <p>Further, the b.i.d. dose was introduced for day 1, period 2 (instead of single dose). Originally, it was planned to assess the single-dose pharmacokinetics from 0-24h post dosing. As this was no longer planned to be assessed, the b.i.d. dosing regimen was applied over the entire period 2 (i.e. from day 1-7). This was to ensure a consistent dosing regimen and it would allow for a more appropriate tolerability assessment after an overnight stay of the patients at the site. This assessment was done in the morning of day 2 before patients leave the study site.</p>
24 February 2012	<p>This amendment introduced the following changes:</p> <p>In order to further characterize any potential modification of attention after AFQ056 administration to children with FXS, it was decided to perform mental age-appropriate subtests of the Test of Everyday Attention in Childhood (TEA-Ch). In addition, TEA-Ch was included in order to comply with a request by the European Medicines Agency (EMA) received in the course of the PIP review. To minimize the burden for the patients, TEA-Ch subtests were only performed in the multiple-dosing period 2, as after administration of a considerably low, single dose of AFQ056 in period 1 (15 mg), no meaningful modification of behavior was expected. Further, these subtest would only be applied in cohort 1 (5-11 year-old patients), since it was not considered feasible to perform these tests in cohort 2 (3-4 year-old patients) given that these tests have been validated for children <math>\geq 6</math> years of age. The tests were done at baseline, 24 h after first dosing in period 2 and at final visit if possible based on the capabilities of study patients (as judged by Investigator).</p>
11 May 2012	<p>This amendment introduced the following changes:</p> <p>In the original study protocol, (a) sequential dosing within cohort 1 beginning with the older (8 to 11 years) followed by the younger patients (5 to 7 years) and (b) an equal number of 5 to 7 year-old and 8-11 year-old patients in cohort 1 was required. This had been implemented due to the absence of any PK data in the pediatric population of FXS patients younger than 12 years.</p> <p>As per this amendment sequential age-dependent dosing as well as an equal age distribution of patients aged 8-11 and 5-7yrs will no longer be required. This was to minimize the burden to the families/caregivers of the FXS patients, since there were often siblings interested in study participation. Therefore, it was expected to improve the recruitment in this study.</p> <p>This amendment would not affect the validity of the statistical analysis as this has originally been planned to be done on the entire cohort 1 without age discrimination. It was also not expected to affect the safety and tolerability of AFQ056 in this study population of pediatric FXS patients.</p>
11 July 2012	<p>This amendment introduced the following changes:</p> <p>After a review of Amendment 03, FDA stated via e-mail dated June 29, 2012, that the removal of an equal age distribution in cohort 1 is not acceptable. It was stated that an equal number of 5 to 7 year-old and 8 to 11 year-old patients was necessary for the PK trial to be informative given the expected difference in ontogeny among these age groups. Therefore, the requirement for an equal number of six patients aged 5 to 7 years and another six patients aged 8-11 years was re-introduced in this protocol amendment 04.</p>

22 March 2013	<p>This amendment introduced the following changes:</p> <p>This study evaluated the pharmacokinetics as well as safety and tolerability of AFQ056 in pediatric patients with FXS aged 5-11 years (cohort 1) and 3-4 years (cohort 2). As of 22- Mar-2013, cohort 1, consisting of 12 children with FXS, has completed the study. This was followed by a pre-planned interim analysis to decide upon continuation of this study with cohort 2. Based on the data obtained in cohort 1, it has been decided to continue with cohort 2 and to implement three key changes to the protocol</p> <ul style="list-style-type: none"> <li>* An up-titration scheme with a starting dose of 25mg b.i.d. and daily increments of 25mg up to the assigned target dose will be applied in period 2, cohort 2. This up-titration aims at reducing the incidence of AEs (e.g. vomiting) that are considered to be first-dose related, as these occurred primarily on the first day of the multiple-dosing period 2 in cohort 1.</li> <li>* As a consequence of the up-titration, the duration of the treatment in period 2, cohort 2 was extended from 7 to 8 days to assure that the steady state at the target dose is reached (the steady state is known to reach between 48h to 96 h for AFQ056) when the PK samples for AFQ056 measurements are collected.</li> <li>* The sample size required for cohort 2 has been re-evaluated based on the PK data obtained in cohort 1. This has been done in order to minimize the number of patients exposed which appears particularly important given the low age of patients in cohort 2 (3-4 years).</li> </ul>
---------------	---

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
