

Clinical trial results:

Comparative study of the immunogenicity and protective efficacy of GlaxoSmithKline Biologicals' rec-DNA Hepatitis B vaccine (10µg) with or without Hepatitis B immunoglobulin (HBIG) in newborns of Hepatitis B envelope antigen positive (HBeAg+) mothers

Summary

EudraCT number	2011-004879-36
Trial protocol	Outside EU/EEA
Global end of trial date	18 March 2010

Results information

Result version number	v1 (current)
This version publication date	22 April 2016
First version publication date	22 July 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 November 2010
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 March 2010
Global end of trial reached?	Yes
Global end of trial date	18 March 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- To evaluate the anti-HBs persistence up to Year 20 after the first vaccine dose of the primary vaccination.
- To evaluate the prevalence and incidence of other hepatitis B markers (HBsAg, anti-HBc, HBeAg, anti-HBe) up to Year 20 after the first vaccine dose of the primary vaccination.
- To evaluate the clinical significance of the HBsAg positive and anti-HBc positive cases observed during the long-term follow-up of this study.

Protection of trial subjects:

All subjects were supervised closely for at least 30 minutes following vaccination with appropriate medical treatment readily available. Vaccines were administered by qualified and trained personnel. Vaccines were administered only to eligible subjects that had no contraindications to any components of the vaccines. Subjects were followed-up for one month (minimum 30 days) following administration of the last dose of study vaccines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 October 2003
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Thailand: 79
Worldwide total number of subjects	79
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	30

Adults (18-64 years)	49
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The baseline characteristics are given for the Year 15 time point. Therefore the number of participants in the Engerix-3D Group is 21, as in the Year 15 participant flow data.

Period 1

Period 1 title	At Year 15 (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Engerix 4D + HBIG Group

Arm description:

Subjects received Engerix™ (hepatitis B vaccine [HBV]) at Month 0, 1, 6 and 60 with hepatitis B immunoglobulins (HBIG) administered concomitantly at birth in the opposite arm.

Arm type	Experimental
Investigational medicinal product name	Engerix™ -B
Investigational medicinal product code	
Other name	HBV
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 (Groups A and C) or 4 (Groups B and D) intramuscular injections during the primary study.

Investigational medicinal product name	Hepatitis B immunoglobulin (HBIG)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

1 intramuscular injections at birth (primary study).

Arm title	Engerix 3D + HBIG Group
------------------	-------------------------

Arm description:

Subjects received Engerix™ (hepatitis B vaccine [HBV]) at Month 0, 1, and 6 with hepatitis B immunoglobulins (HBIG) administered concomitantly at birth in the opposite arm.

Arm type	Experimental
Investigational medicinal product name	Engerix™ -B
Investigational medicinal product code	
Other name	HBV
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 (Groups A and C) or 4 (Groups B and D) intramuscular injections during the primary study.

Investigational medicinal product name	Hepatitis B immunoglobulin (HBIG)
Investigational medicinal product code

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 August 2003	The protocol was amended to further extend the follow-up period up to Year 20 after the first vaccine dose (with a blood sample taken at yearly intervals), to evaluate the anti-HBs persistence and to further investigate the prevalence and incidence of other hepatitis B markers (HBsAg, anti-HBc, HBeAg, anti-HBe, ALT/AST), and the clinical significance of the HBsAg and anti-HBc positive cases observed during the long-term follow-up of this study. These additional data was important to determine the long-term booster policy in subjects born from HBsAg+ mothers. Moreover, if subjects developed clinical signs possibly related to hepatitis B or have significantly high AST/ALT serum concentrations, additional medical tests were performed by the investigator, according to good medical practices.
05 April 2007	The protocol was amended to state that from Year 16 onwards to Year 20 time points, only subjects who test positive for HBsAg or anti-HBc antibodies were tested for HBeAg and anti-HBe antibodies.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
