Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 August 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 April 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main aim of the second extension study is to explore the bactericidal antibody persistence in 4-year-old children after a fourth dose boost of rMenB+OMV NZ given at 12, 18, or 24 months of age or after a two-dose catch-up schedule of rMenB+OMV NZ administered at either 12 and 14, 18 and 20, or 24 and 26 months of age in study V72P12E1.

Protection of trial subjects:

Standard immunization practices should be observed and care should be taken to administer the injection intramuscularly. As with all injectable vaccines, appropriate medical treatment and supervision should be readily available in case of anaphylactic reactions following administration of the study vaccine, in accordance with local practice/guidelines such as epinephrine 1:1000 and diphenhydramine.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 101
Country: Number of subjects enrolled	United Kingdom: 314
Country: Number of subjects enrolled	Czech Republic: 215
Country: Number of subjects enrolled	Italy: 175
Worldwide total number of subjects	805
EEA total number of subjects	805

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	805
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled from 4 centers in the UK; 4 centers in Italy; 4 centers in Spain; 19 centers in Czech Republic.

Pre-assignment

Screening details:

All enrolled subjects were included in the trial.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The trial was designed as an open-label study; all subjects scheduled to receive vaccination received MenB vaccine (rMenB+OMV NZ). The personnel analyzing the serum at the centralized laboratory were blinded to the study group of the subject.

Arms

Are arms mutually exclusive?	Yes
Arm title	B+R246_12_48

Arm description:

Previously received rMenB+OMV NZ vaccine + routine vaccines at 2, 4 and 6 months of age followed by a booster dose of rMenB+OMV NZ vaccine at 12 months of age. One third of subjects from this group received a 5th dose of rMenB+OMV NZ vaccine in the present study at 4 years of age.

Arm type	Experimental
Investigational medicinal product name	Novartis meningococcal B recombinant+ OMV NZ Vaccine
Investigational medicinal product code	rMenB+OMV NZ
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subject received one injection of a 0.5 mL dose.

Arm title	B+R246_18_48
------------------	--------------

Arm description:

Previously received rMenB+OMV NZ vaccine + routine vaccines at 2, 4 and 6 months of age followed by a booster dose of rMenB+OMV NZ vaccine at 18 months of age. One third of subjects from this group received a 5th dose of rMenB+OMV NZ vaccine in the present study at 4 years of age.

Reporting group title	B18_20_48
Reporting group description: Previously received two catch-up doses of rMenB+OMV NZ vaccine at 18 & 20 months of age. All subjects from this group received a 3rd dose of rMenB+OMV NZ vaccine in the present study at 4 years of age.	
Reporting group title	B24_26_48
Reporting group description: Previously received two catch-up doses of rMenB+OMV NZ vaccine at 24 & 26 months of age. All subjects from this group received a 3rd dose of rMenB+OMV NZ vaccine in the present study at 4 years of age.	
Reporting group title	B48_50
Reporting group description: Newly recruited 4 year old naive subjects who received 2 catch-up doses of rMenB+OMV NZ vaccine, two months apart, in the present study.	

Primary: 1) Percentages of Subjects With Persisting Serum Bactericidal Titers $\geq 1:5$ and $\geq 1:8$ (at 4 Years of Age), Who Had Previously Received Three Primary Doses and One Booster Dose of rMenB+OMV NZ Vaccine According to Different Schedules

End point title	1) Percentages of Subjects With Persisting Serum Bactericidal Titers $\geq 1:5$ and $\geq 1:8$ (at 4 Years of Age), Who Had Previously Received Three Primary Doses and One Booster Dose of rMenB+OMV NZ Vaccine According to Different Schedules ^{[1][2]}
End point description: The antibody persistence at 4 years of age in children who had previously received 3 primary doses (at 2, 3, 4, or 2, 4, 6 months) followed by a booster dose (at 12, 18 or 24 months) of rMenB+OMV NZ vaccine according to different schedules is compared with the response in naïve children and reported as percentages of subjects with human serum bactericidal assay (hSBA) titers $\geq 1:5$ and $\geq 1:8$. Analysis was done on the Full Analysis set (FAS), Persistence, ie, all subjects in the enrolled population who provided at least one evaluable serum sample at baseline (visit 1).	
End point type	Primary
End point timeframe: Day 1 (24-36 months post booster; baseline for naïve)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis is associated to this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis is associated to this endpoint.

End point title	15) Percentages of Subjects With hSBA $\geq 1:5$ and $\geq 1:8$ in Response of Two Catch up Doses of rMenB+OMV NZ Vaccine When Administered to Children at 4 Years of Age ^[20]
-----------------	---

End point description:

The sufficiency of immune response is reported in terms of percentages of subjects with hSBA $\geq 1:5$ and $\geq 1:8$ in response of two catch up doses of rMenB+OMV NZ vaccine, administered two months apart, in children at 4 years of age.

Immune response was considered sufficient if the lower limit of the two-sided 95% CI for the percentage of subjects achieving hSBA $\geq 1:5$ at one month after the two-dose series was $> 70\%$ for all three indicator (H44/76; 5/99 and NZ 98/254) strains.

Immune sufficiency was not applicable for M10713 strain.

Analysis was done on FAS (Immunogenicity).

End point title	21) Number of Subjects Reporting Solicited Local and Systemic Adverse Events After Receiving the first Catch up Dose of rMenB+OMV NZ Vaccine at 4 Years of Age ^[26]
-----------------	--

End point description:

The safety and tolerability of rMenB+OMV NZ vaccine in 4 year old children who received 2 catch up doses of rMenB+OMV NZ vaccine at 48 and 50 months, is reported as number of subjects with solicited local and systemic adverse events after the first dose.

Analysis was done on the safety population.

End point type	Secondary
----------------	-----------

End point timeframe:

From day 1 to day 7 after first vaccination

Notes:

[26] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis is associated to this endpoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited (systematic) local and systemic adverse events (AEs), unsolicited (non-systematic) AEs and med. attended fever were recorded during the 7 days after study vaccination. Serious adverse events (SAEs) were collected throughout the study period.

Adverse event reporting additional description:

560 out of 805 enrolled subjects were exposed to study vaccination. Of these, 558 subjects were included in safety set.

Assessment type	Non-systematic

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 August 2012	1 - Modification of the inclusion criteria. 2 - Modification of the exclusion criteria to clarify the difference between exclusionary criteria and criteria that should be considered for delay of enrollment, vaccination, or blood sampling visits. 3 - Addition of missing abbreviations into the list. 4 - Editorial changes between: Exclusion Criteria, Vaccines Preparation and Administration, and Other Concomitant Treatment or Vaccines. Clarification of criteria for delay of subject enrollment, vaccination, and/or blood sampling visits under Exclusion Criteria. 5 - Addition and further clarification of missing collection time for immediate reactions post-vaccination for Group 7: Visit 1 and Visit 3. In addition, clarification of collections times for axillary body temperature, solicited local and systemic reactions. 6 - Correction of timing for reporting SAEs by investigator to the sponsor in compliance with EU directive. 7 - Standardizing visit window and clarification of visit window units as "days".
12 November 2012	1 - Modifying the 4th secondary objective upon introducing criteria for measuring sufficiency of immune response after two-dose series of rMenB+OMV NZ. 2 - Increasing the number of subjects planned for enrollment in group B_48 50 and adjusting total number of subjects planned accordingly. 3 - Introducing an interim analysis for group B_48 50. 4 - Editorial changes in one of the vaccine preparation and administration steps to be in alignment with instructions listed in the Investigator's Brochure (IB) and Summary of Product Characteristics (SmPC).
13 March 2013	1 - Add steps for collecting AEs related to study procedures (i.e. Blood draw) for subjects belonging to the non-vaccination subset#1 of groups 1 and 2, who are assigned to have a single blood draw visit. 2 - Clarify study visit windows.
14 November 2013	Definition of the End of Study in relation to the testing of the last biological sample collected from the study subjects.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
