**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 May 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 May 2015
Global end of trial reached?	Yes
Global end of trial date	22 May 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

MK-3415A is the combination of monoclonal antibodies to Clostridium (C.) difficile toxin A (MK-3415) and toxin B (MK-6072). This study will investigate whether: 1) treatment with MK-6072 or MK-3415A in addition to standard of care (SOC) antibiotic therapy will decrease Clostridium Difficile Infection (CDI) recurrence compared with placebo; and 2) MK-6072 and MK-3415A will be generally well tolerated in participants receiving SOC therapy for CDI compared with placebo.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy:

Standard of Care (SOC) for CDI will be prescribed for 10 to 14 days and can begin on the day of study drug infusion; but the first dose must have been administered prior to or within a few hours following study drug infusion. SOC is defined as the receipt of oral metronidazole, oral vancomycin, intravenous (IV) metronidazole concurrent with oral vancomycin, oral fidaxomicin, or oral fidaxomicin concurrent with IV metronidazole.

Evidence for comparator: -

Actual start date of recruitment	01 February 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	9 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 17
Country: Number of subjects enrolled	Canada: 74
Country: Number of subjects enrolled	Czech Republic: 57
Country: Number of subjects enrolled	Finland: 20
Country: Number of subjects enrolled	France: 68
Country: Number of subjects enrolled	Germany: 52
Country: Number of subjects enrolled	Israel: 18
Country: Number of subjects enrolled	Japan: 95
Country: Number of subjects enrolled	Korea, Republic of: 66
Country: Number of subjects enrolled	Poland: 90
Country: Number of subjects enrolled	Russian Federation: 33
Country: Number of subjects enrolled	Spain: 94

Country: Number of subjects enrolled	Sweden: 56
Country: Number of subjects enrolled	Switzerland: 4
Country: Number of subjects enrolled	Taiwan: 22
Country: Number of subjects enrolled	Turkey: 27
Country: Number of subjects enrolled	United States: 410
Worldwide total number of subjects	1203
EEA total number of subjects	437

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	531
From 65 to 84 years	559
85 years and over	113

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Male and female participants 18 years of age or older, diagnosed with CDI and receiving SOC therapy were recruited for this trial.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	MK-3415A + Standard Of Care (SOC)

Arm description:

Single intravenous (IV) infusion of 10 mg/kg MK-3415A + SOC for CDI

Arm type	Experimental
Investigational medicinal product name	SOC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Standard of Care (SOC) for CDI will be prescribed for 10 to 14 days and can begin on the day of study drug infusion; but the first dose must have been administered prior to or within a few hours following study drug infusion. SOC is defined as the receipt of oral metronidazole, oral vancomycin, intravenous (IV) metronidazole concurrent with oral vancomycin, oral fidaxomicin, or oral fidaxomicin concurrent with IV metronidazole

Investigational medicinal product name	MK-3415A
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Single IV infusion of MK-3415A (10 mg/kg of monoclonal antibody to C. difficile Toxin A and 10 mg/kg of monoclonal antibody to C. difficile Toxin B)

<b>Arm title</b>	MK-6072 + Standard Of Care (SOC)
------------------	----------------------------------

Arm description:

Single intravenous (IV) infusion of 10 mg/kg MK-6072 + SOC for CDI

Arm type	Experimental
Investigational medicinal product name	SOC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Standard of Care (SOC) for CDI will be prescribed for 10 to 14 days and can begin on the day of study drug infusion; but the first dose must have been administered prior to or within a few hours following

study drug infusion. SOC is defined as the receipt of oral metronidazole, oral vancomycin, intravenous (IV) metronidazole concurrent with oral vancomycin, oral fidaxomicin, or oral fidaxomicin concurrent with IV metronidazole

Investigational medicinal product name	MK-6072
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Single IV infusion of MK-6072 (10 mg/kg of monoclonal antibody to C. difficile Toxin B)

<b>Arm title</b>	Placebo + Standard Of Care (SOC)
------------------	----------------------------------

Arm description:

Normal saline IV infusion (0.9% sodium chloride) + SOC for CDI

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Single IV infusion of normal saline (0.9% sodium chloride)

Investigational medicinal product name	SOC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Standard of Care (SOC) for CDI will be prescribed for 10 to 14 days and can begin on the day of study drug infusion; but the first dose must have been administered prior to or within a few hours following study drug infusion. SOC is defined as the receipt of oral metronidazole, oral vancomycin, intravenous (IV) metronidazole concurrent with oral vancomycin, oral fidaxomicin, or oral fidaxomicin concurrent with IV metronidazole

Reporting group description:	
Normal saline IV infusion (0.9% sodium chloride) + SOC for CDI	

### Primary: Percentage of participants with CDI recurrence

End point title	Percentage of participants with CDI recurrence
End point description:	
CDI recurrence is defined as the development of a new episode of diarrhea (3 or more loose stools in 24 or fewer hours) and a positive lab stool test (local or central) for toxigenic C. difficile after clinical cure of the initial CDI episode. Clinical cure is defined as no diarrhea [2 or fewer loose stools per 24 hours] for 2 consecutive days following completion of SOC therapy for the initial CDI episode in participants who received $\leq$ 14 day regimen. The Full Analysis Set (FAS) population is analyzed consisting of all randomized participants with participants excluded for the failure to receive infusion of study medication; for lack of a positive local stool test for toxigenic C. difficile; or for failure to receive protocol defined standard of care therapy within a 1 day window of the infusion.

### Secondary: Percentage of participants with CDI recurrence in those with clinical cure of the initial CDI episode

End point title	Percentage of participants with CDI recurrence in those with clinical cure of the initial CDI episode
-----------------	---

End point description:

CDI recurrence is defined as the development of a new episode of diarrhea (3 or more loose stools in 24 or fewer hours) and a positive lab stool test (local or central) for toxigenic C. difficile. Clinical cure is defined as no diarrhea [2 or fewer loose stools per 24 hours] for 2 consecutive days following completion of SOC therapy for the initial CDI episode in participants who received =< 14 day regimen. The population analyzed is treated participants who achieved a clinical cure of the initial CDI episode.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Non-serious adverse events collected systematically up to Day 28; serious adverse events collected systematically up to Day 90

Adverse event reporting additional description:

APaT, based on the treatment actually received. One participant randomized to the MK-3415A + SOC arm who was treated with MK-3415, but was not treated with MK-6072, is placed in his own arm for MK-3415 (not a randomized arm for this study).

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 May 2013	Amendment 1 was implemented after enrollment of participants had commenced and before database lock and unblinding. Major changes included: increased infusion set filter pore size to 5 micron or smaller from 0.2 microns or smaller; report serious adverse experiences that either had an outcome of death or were considered to be related to study medication during the 9-month extension period; updated eligibility criteria to exclude subjects who had received an experimental C. difficile vaccine or other experimental monoclonal antibody against C. difficile toxin A or B, or subjects who planned to receive during the follow-up period fecal transplantation therapy or any other therapies that had been demonstrated to decrease CDI recurrence; modified the definition of the clinical cure endpoint with regard to the duration of standard of care medication: a 14 day regimen was defined as treatment spanning no more than 16 calendar days.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
