

Clinical trial results:

A Phase I/II, open-label, dose escalating with 48 week treatment study to assess the safety and tolerability, pharmacokinetics, pharmacodynamics and efficacy of PRO053 in subjects with Duchenne muscular dystrophy

Summary

EudraCT number	2011-005042-35
Trial protocol	GB BE IT NL FR
Global end of trial date	31 August 2016

Results information

Result version number	v1 (current)
This version publication date	23 March 2017
First version publication date	23 March 2017

Trial information

Trial identification

Sponsor protocol code	PRO053-CLIN-01
-----------------------	----------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01957059
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001374-PIP01-12
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 October 2016
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	31 August 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of PRO053 after 48 weeks treatment in ambulant subjects with Duchenne muscular dystrophy.

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 July 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	United Kingdom: 2
Worldwide total number of subjects	9
EEA total number of subjects	9

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	8
Adolescents (12-17 years)	1
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Visit S1 will include confirmation of consent and evaluation of the full DNA diagnostic report and the inclusion and exclusion criteria. Visit S2 should not be conducted until enrolment into any given dose group is agreed. S2 will be conducted within 2 weeks prior to first dose. S2 will include evaluation of the inclusion and exclusion criteria.

Period 1

Period 1 title	dose escalation (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Cohort 1

Arm description:

BMN 053

Arm type	Experimental
Investigational medicinal product name	BMN053
Investigational medicinal product code	BMN053
Other name	PRO053
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

In the dose-escalation phase, two cohorts of three subjects each receive two single doses of BMN 053 in two study periods (i.e., four single doses in total per subject). In each study period they will receive BMN 053 by IV infusion and by SC injection (separated by one week).

Cohort 1:

1 mg/kg SC followed by 1 mg/kg IV

And then 6 mg/kg SC followed by 6 mg/kg IV

Arm title	Cohort 2
------------------	----------

Arm description:

BMN 053

Arm type	Experimental
Investigational medicinal product name	BMN053
Investigational medicinal product code	BMN053
Other name	PRO053
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

In the dose-escalation phase, two cohorts of three subjects each receive two single doses of BMN 053 in two study periods (i.e., four single doses in total per subject). In each study period they will receive BMN 053 by IV infusion and by SC injection (separated by one week).

Cohort 2:

3 mg/kg SC followed by 3 mg/kg IV

And then 9 mg/kg SC followed by 9 mg/kg IV

Number of subjects in period 1	Cohort 1	Cohort 2
Started	9	3
Completed	0	3
Not completed	9	0
Study Subject Withdrawal by Parent or Guardian	2	-
Study Terminated by Sponsor	7	-

Reporting group title	Cohort 2
Reporting group description: BMN 053	

Primary: Efficacy

End point title	Efficacy ^[1]
End point description: To assess the efficacy of BMN 053 at recommended dosing regimen after 48 weeks of dosing in ambulant subjects with Duchenne muscular dystrophy.	
End point type	Primary
End point timeframe: 48 weeks	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to the early termination of this study, the treatment phase of the study was not initiated. For the dose escalation/regimen selection phase no formal statistical analysis was performed.

End point values	Cohort 1	Cohort 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 ^[2]	0 ^[3]		
Units: meter				
arithmetic mean (standard deviation)	()	()		

Notes:

[2] - Due to the early termination of this study, the treatment phase of the study was not initiated.

[3] - Due to the early termination of this study, the treatment phase of the study was not initiated.

Statistical analyses

No statistical analyses for this end point

Adverse events
