

Clinical trial results:

A phase III, randomized, assessor-blinded, active-controlled, multicenter study of the efficacy and safety of APO-EPO as compared to Procrit® when given subcutaneously to patients with anemia of chronic kidney disease stage 5D who are currently not on epoetin replacement therapy

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 September 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 September 2017
Global end of trial reached?	Yes
Global end of trial date	18 September 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the therapeutic equivalence of Apotex's epoetin alfa (APO-EPO) versus US registered epoetin alfa (Procrit®) for correction of the hemoglobin (Hb) concentration in patients with anemia of chronic kidney disease (CKD) stage 5 maintained on stable hemodialysis (CKD stage 5D).

Protection of trial subjects:

The study was conducted in accordance with the protocol, principles of Good Clinical Practice (GCP), Declaration of Helsinki and amendments, and applicable local regulations. Independent oversight of study was provided by Data and Safety Monitoring Board, which assessed the accumulating safety data from the study (10 meetings were conducted during study course). All subjects were fully informed of all aspects of clinical study, including its experimental nature, its purpose, the procedures involved, the expected duration, the potential risk and benefits, any discomfort it may entail as well as possibility to discontinue at any time in the local language. Collected protected health information obtained during the study was processed in compliance with the Personal Data Protection laws and legislations governing personal data protection in all countries.

Background therapy:

All patients enrolled in the study were on chronic stable hemodialysis (at least 3 times per week). Iron stores were monitored regularly and maintained using iron replacement therapy as per local practice of the study sites. For patients with low iron store levels (TSAT <20% or ferritin <100 ng/ml) despite iron replacement therapy, i.v. iron sucrose - Venofer® was used. It was provided by the Sponsor within the frame of the Protocol.

Evidence for comparator:

Procrit® is the original recombinant human epoetin alfa compounds, manufactured by Amgen Inc., USA. In clinical studies of CKD patients on dialysis, Procrit® increased hemoglobin levels and decreased the need for RBC transfusion. Overall, more than 95% of patients were RBC transfusion-independent after receiving Procrit® for 3 months. The safety and efficacy of Procrit® were evaluated in 13 clinical studies involving intravenous administration to a total of 1010 anemic patients on dialysis. Overall, more than 90% of the patients experienced improvement in hemoglobin concentrations. The median maintenance dose necessary to maintain the hemoglobin between 10 and 12 g/dl was approximately 75 IU/kg t.i.w. (Procrit US Package Insert, FDA)

Actual start date of recruitment	01 October 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

85 years and over	1

Subject disposition

Recruitment

Recruitment details:

A total of 533 subjects were randomized at 57 study centers in 11 countries (Bulgaria, Czechia, Georgia, Greece, Lebanon, Poland, Romania, Serbia, Slovakia, Tunisia, and Ukraine) between 23 SEP 2013 and 17 OCT 2016. Subjects were randomized in a 2:1 ratio - 355 subjects in the APO-EPO and 178 in the Procrit® group.

Pre-assignment

Screening details:

Patients above 18 years with anemia (hemoglobin level below 10 g/dl) of chronic kidney disease stage 5 who were on stable hemodialysis were enrolled. Patients were not receiving epoetin replacement therapy at enrollment and had sufficient iron stores. During enrollment 482 subjects were considered as screen failures.

Pre-assignment period milestones

Number of subjects started	533
Number of subjects completed	533

Period 1

Period 1 title	Correction phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Blinding implementation details:

The assessor(s) – investigators participating in the patient assessments were blinded to the treatment allocation throughout the study. The allocated treatment was disclosed only to the unblinded study staff, who was responsible for the receipt, accountability, preparation, and administration of the study treatment. The unblinded staff did not communicate to the assessor(s) the medication allocation.

Arms

Are arms mutually exclusive?	Yes
Arm title	APO-EPO

Arm description:

APO-EPO as recombinant human epoetin alfa was developed as a proposed biosimilar to the US-registered epoetin alfa Procrit®. The product contains the identical amino acid sequence as an isolated natural EPO. It was administered s.c., t.i.w. and was titrated individually according to the pre-specified rules to achieve stable Hb concentrations

Arm type	Experimental
Investigational medicinal product name	recombinant human epoetin alfa
Investigational medicinal product code	APO-EPO
Other name	
Pharmaceutical forms	Solution for injection in vial
Routes of administration	Subcutaneous use

Dosage and administration details:

Provided as single-dose preservative-free vials containing 2,000, 3,000, 4,000 or 10,000 units of epoetin alfa per milliliter in citrate-buffered formulation.

The starting dose will be 25 IU/kg, administered s.c., t.i.w (i.e. a total dose of 75 IU/kg per week) and will be titrated individually in order to achieve stable Hb concentrations of 10.0-11.0 g/dl.

Arm title	Procrit
------------------	---------

Arm description:

Procrit is a recombinant human epoetin alfa, has the same biological effects as endogenous EPO. It was

administered s.c., t.i.w. and was titrated individually according to the pre-specified rules to achieve stable Hb concentrations

Arm type	Active comparator
Investigational medicinal product name	recombinant human epoetin alfa
Investigational medicinal product code	Procrit
Other name	
Pharmaceutical forms	Solution for injection in vial
Routes of administration	Subcutaneous use

Dosage and administration details:

Provided as a single-dose, preservative-free vial. Each 1 ml of solution contains 2,000, 3,000, 4,000, or 10,000 units of epoetin alfa.

The starting dose will be 25 IU/kg, administered s.c., t.i.w (i.e. a total dose of 75 IU/kg per week) and will be titrated individually in order to achieve stable Hb concentrations of 10.0-11.0 g/dl.

Number of subjects in period 1	APO-EPO	Procrit

Subject analysis set type	Intention-to-treat
Subject analysis set description: The ITT analysis set comprised of all randomized subjects who received at least one dose of study drug and who provided at least one post-baseline Hb measurement. The ITT analysis set was	

analyzed as randomized, except for the primary endpoint, which was analyzed both "as randomized" and "as treated".

Subject analysis set title	Modified Intention-to-Treat
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

As both co-primary endpoints were based on Evaluation Phase data only, the mITT analysis set included those subjects who started this phase and had available measurements for at least one of the 2 co-primary endpoints in the Evaluation Phase (measured between Week 21-24). The mITT analysis set was analyzed both "as randomized" and "as treated".

Subject analysis set title	Per protocol
Subject analysis set type	Per protocol

Subject analysis set description:

The PP analysis set comprised of all subjects from the mITT analysis set who had no major PDs that affected the interpretation of the primary and co-primary endpoints had completed at least 2 weeks in the Evaluation Phase, and whose mean Hb level during the Evaluation Phase was maintained in the prescribed interval of 10-11 g/dL. Major PDs and their impact on primary and co-primary endpoints were defined in the Protocol Deviation Handling Plan and were assessed during the Blinded Data Review Meeting.

subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Blood and lymphatic system disorders			
Anaemia			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Haemorrhagic disorder			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gastrointestinal disorders			

Duodenal ulcer			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Duodenal ulcer haemorrhage			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gastritis			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gastrointestinal haemorrhage			
subjects affected / exposed	3 / 351 (0.85%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 3	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Gastrooesophageal reflux disease			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Intestinal haemorrhage			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Intestinal obstruction			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Melaena			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Hepatobiliary disorders			

Cholecystitis			
subjects affected / exposed	1 / 351 (0.28%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 1	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cholecystitis chronic			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Skin and subcutaneous tissue disorders			
Dermal cyst			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Renal and urinary disorders			
Azotaemia			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infections and infestations			
Acute endocarditis			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Appendicitis perforated			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cellulitis			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Enterobacter sepsis			

subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gangrene			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Hepatitis B			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infected dermal cyst			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Localised infection			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Lower respiratory tract infection			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Peritonitis			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pneumonia			
subjects affected / exposed	5 / 351 (1.42%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 5	0 / 0	
deaths causally related to treatment / all	0 / 3	0 / 0	
Pneumonia bacterial			

subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pyelonephritis chronic			
subjects affected / exposed	1 / 351 (0.28%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 1	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pyonephrosis			
subjects affected / exposed	0 / 351 (0.00%)	1 / 179 (0.56%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Respiratory tract infection			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Sepsis			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Septic shock			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Staphylococcal sepsis			
subjects affected / exposed	1 / 351 (0.28%)	0 / 179 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	APO-EPO	Procrit	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	45 / 351 (12.82%)	26 / 179 (14.53%)	
Vascular disorders			
Hypertension			
subjects affected / exposed	24 / 351 (6.84%)	11 / 179 (6.15%)	
occurrences (all)	42	12	
Nervous system disorders			
Headache			
subjects affected / exposed	24 / 351 (6.84%)	15 / 179 (8.38%)	
occurrences (all)	31	21	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 June 2012	Global Amendment 1
29 October 2012	Global Amendment 2
22 April 2013	Global Amendment 3
25 June 2013	Global Amendment 4
28 February 2014	Global Amendment 5
07 April 2015	Global Amendment 6
09 July 2015	Global Amendment 7

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
