

Clinical trial results:

A phase III randomised, open label clinical trial evaluating the immunogenicity of a 10-valent pneumococcal conjugate vaccine booster compared to the standard 13-valent pneumococcal conjugate vaccine booster given at 12 months of age to healthy children who have received the 13-valent pneumococcal conjugate vaccine at 2 and 4 months of age.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 July 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 October 2014
Global end of trial reached?	Yes
Global end of trial date	13 October 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to assess whether the study vaccine (PHiD-CV) is as good as the standard vaccine (PCV-13) in terms of percentage of participants who have antibody concentrations above the protective threshold ($\geq 0.35\text{mcg/ml}$) for the 10 serotypes included in PHiD-CV (serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F, 23F) one month following booster vaccination at 12 months of age with PHiD-CV or PCV-13.

Protection of trial subjects:

All study procedures were performed by qualified, trained staff delegated by the PI. Standard practice equivalent to clinical care is used for vaccination and venepuncture in all paediatric studies.

All serious adverse events were reported to the sponsor, who provided safety oversight and ensured that all SAEs were reviewed by a medical monitor on a regular basis.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 April 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 178
Worldwide total number of subjects	178
EEA total number of subjects	178

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	178
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

177 healthy children who have been vaccinated according to the routine immunisation schedule and received the 13-valent pneumococcal conjugate vaccine at 2 and 4 months of age were enrolled during a 6 month period starting in April 2012.

Pre-assignment

Screening details:

No screening visit was performed. Enrolment was performed during the first study visit at which randomisation was performed and IMP was administered.

Period 1

Period 1 title	Vaccine Administration and Randomisation
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Group 1

Arm description:

Booster vaccination with PHiD-CV (Synflorix®, GSK Biologicals)

Arm type	Experimental
Investigational medicinal product name	Synflorix®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Administer a single 0.5-ml dose of PHiD-CV or PCV-13 via intramuscular injection into the anterolateral aspect of either thigh.

Arm title	Group 2
------------------	---------

Arm description:

Booster vaccination with PCV-13 (Prevenar 13®, Pfizer)

Arm type	Experimental
Investigational medicinal product name	Prevenar 13®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Administer a single 0.5-ml dose of PHiD-CV or PCV-13 via intramuscular injection into the anterolateral aspect of either thigh. .

Number of subjects in period 1 ^[1]	Group 1	Group 2
Started	87	90
Completed	87	90

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One participant withdrew consent prior to vaccination.

Period 2

Period 2 title	Visit 2 and 3 - Follow up
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Group 1 - Follow up

Arm description:

Visit 2

All participants receive routine immunisations (MMR, Hib-MenC) and blood sample collected. AE data reviewed.

Visit 3

Blood sample collected. SAE data reviewed.

Arm type	Sample collection
No investigational medicinal product assigned in this arm	
Arm title	Group 2 - Follow up

Arm description:

Visit 2

All participants receive routine immunisations (MMR, Hib-MenC) and blood sample collected. AE data reviewed.

Visit 3

Blood sample collected. SAE data reviewed.

Arm type	Sample collection
No investigational medicinal product assigned in this arm	

Number of subjects in period 2	Group 1 - Follow up	Group 2 - Follow up
Started	87	90
Completed	87	84
Not completed	0	6
Consent withdrawn by subject	-	4
Lost to follow-up	-	2

Statistical analyses

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All AEs occurring in the first 4 days after booster immunisation, and all AEs resulting in an unscheduled visits to a physician or emergency department or withdrawal from the study occurring within 1 month after vaccination were collected.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 May 2012	<p>Protocol Both vaccines in the study (Prevenar13 and Synflorix) can be given in either the arms or legs, as specified in the Summary of Product Characteristics. For ease of administration in infants injection into the leg (thigh) is preferred, in practice. The change to the protocol is to clarify that the anterolateral aspect of either thigh will be used as an injection site for either of the two vaccines administered. Whether the right or left leg is used will be documented in the diary card, as is being done currently, for information of the parents.</p> <p>Information Booklet Clarification that anonymised participants' information will be shared, as and when required by the Sponsor's contractual agreements, with GlaxoSmithKline who manufacture the PCV10 vaccine and fund the study.</p> <p>Consent Form Seeking consent for the changes made to the information booklet that clarify that anonymised participants' information will be shared, as and when required by the Sponsor's contractual agreements, with GlaxoSmithKline who manufacture the PCV10 vaccine and fund the study.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No
