Was the trial ended prematurely?	No	

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to compare the efficacy of budesonide multi-matrix system (MMX) 9 milligrams (mg) and placebo as add-on therapy to an existing oral 5-aminosalicylic acid (5-ASA) regimen for the induction of clinical remission in participants with active, mild to moderate ulcerative colitis (UC) when administered for 8 weeks.

Protection of trial subjects:

This study was conducted in accordance with the Declaration of Helsinki on Ethical Principles for Medical Research Involving Human Subjects, and with Good Clinical Practice (GCP), as required by the US Code of Federal Regulations applicable to clinical studies (21 CFR Parts 11, 50, 54, 56 and 312, 42 USC 282(j), International Council for Harmonisation, Harmonised Tripartite Guideline E6(R1): GCP and E2A: Safety Data Management, and applicable local regulations.

Background therapy: -

From 65 to 84 years	33
85 years and over	0

Subject disposition

Recruitment Recruitment details: -

Pre-assignment

Screening details:

At Screening and Visit 5 (Day 56), participants were required to undergo a flexible sigmoidoscopy (or colonoscopy, if clinically indicated) with 1 photograph and 3 mucosal biopsies taken from the most severely affected region(s) of the colon visualized during the endoscopy procedure.

Period 1		
Period 1 title	Overall Study (overall period)	
Is this the baseline period?	Yes	
Allocation method	Randomised - controlled	
Blinding used	Double blind	
Roles blinded	Subject, Investigator, Carer, Assessor	
Arms		
Are arms mutually exclusive?	Yes	
Arm title	Budesonide MMX	
Arm description:		
	desonide MMX 9 mg for 56 days. Additionally, participants neir existing oral 5-ASA medication from their treating physician.	
Arm type	Experimental	
Investigational medicinal product name	Budesonide MMX®	
Investigational medicinal product code		
Other name	Budesonide Multi-Matrix System	
Pharmaceutical forms	Tablet	
Routes of administration	Oral use	
Dosage and administration details:		
Budesonide MMX was administered as p	er the dose and schedule specified in the respective arms.	
Arm title	Placebo	
Arm description:		
	tching budesonide MMX placebo for 56 days. Additionally, me dose of their existing oral 5-ASA medication from their	
Arm type	Placebo	
Investigational medicinal product name	Placebo	
Investigational medicinal product code		
Other name		
Pharmaceutical forms	Tablet	

Dosage and administration details:

Budesonide MMX matching placebo was administered as per the dose and schedule specified in the respective arms.

Number of subjects in period 1	Budesonide MMX	Placebo
Started	255	255
Safety Population	255	255
Intent-To-Treat (ITT) Population	230	228 [1]
Completed	219	238
Not completed	36	17
Consent withdrawn by subject	16	2
Adverse event, non-fatal	12	9
Lost to follow-up	3	4
Lack of efficacy	4	1
Protocol deviation	1	1

Notes:

Justification: The number of subjects who started is the same as the number of subjects in the arm (N=255).

^{[1] -} The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Baseline characteristics

Reporting groups

Reporting group title	Budesonide MMX

Reporting group description:

Participants received 1 oral tablet of budesonide MMX 9 mg for 56 days. Additionally, participants continued to receive the same dose of their existing oral 5-ASA medication from their treating physician.

Reporting group title Placebo

Reporting group description:

Participants received 1 oral tablet of matching budesonide MMX placebo for 56 days. Additionally, participants continued to receive the same dose of their existing oral 5-ASA medication from their treating physician.

Primary: Number of Participants Who Achieved Clinical Remission at Day 56

End point title	Number of Participants Who Achieved Clinical Remission at Day
	56

End point description:

Clinical remission defined as a score of 0 for rectal bleeding and 0 for stool frequency components from the Ulcerative Colitis Disease Activity Index (UCDAI). UCDAI is the sum (0 to 12) of 4 severity scores (0 to 3). Stool frequency and rectal bleeding were based on information recorded in daily participant diaries. Diary entries were averaged for rectal bleeding and stool frequency for 3 days prior to (and closest to) Day 56 with non-missing diary data, within 5 days prior to (and closest to) Day 56. The averages were rounded to integer values. If either subscore could not be calculated because of missing data, the score for that UCDAI component was set to missing. Participants who had clinical remission at Baseline were classified as non-responders. Population included participants who received at least 1 dose of study drug and had active UC at study entry as a cause of their symptoms (Intent-to-Treat [ITT] Population) with evaluable clinical remission data.

Secondary: Change From Baseline in Inflammatory Bowel Disease-Quality of Life (IBD-QoL) Questionnaire Scores

End point title	Change From Baseline in Inflammatory Bowel Disease-Quality
	of Life (IBD-QoL) Questionnaire Scores

End point description:

The IBD-QoL questionnaire was self-completed by the participant. The IBD-QoL is a disease-specific instrument to evaluate the quality of life of participants with UC. This 32-item questionnaire has 4 dimensions: bowel function, emotional function, systemic symptoms, and social function. The total score is presented, which ranges from 32 to 224, with higher scores indicating a better quality of life. The scores of participants in remission usually range from 170 to 190. If >50% of the questionnaire answers for a particular dimension were missing, this dimension score was set to missing. The total score for the IBD-QoL was the sum of the domain scores, however, if any dimension score was missing, the total IBD-QoL score was set to missing. Participants who received at least 1 dose of study drug and had active UC at study entry as a cause of their symptoms (ITT Population) with evaluable IBD-QoL data.
