Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 March 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 March 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the safety and tolerability of elotuzumab, thalidomide, and dexamethasone (E-Td) in subjects with relapsed and/or refractory multiple myeloma (MM) as assessed by the incidence of severe (Grade 3 or higher) non-hematological adverse events (AEs).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 May 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 51
Worldwide total number of subjects	51
EEA total number of subjects	51

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	27
From 65 to 84 years	24
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Of 51 participants enrolled, 40 received treatment. Of those 40, 11 had cyclophosphamide added to their regimens.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Thalidomide + Elotuzumab + Dexamethasone + Cyclophosphamide
------------------	---

Arm description:

Participants received thalidomide in 28-day cycles: 50 mg, for the first 2 weeks, escalated to 100 mg for the next 2 weeks and beginning with Cycle 2, to 200 mg once daily. Elotuzumab, 10 mg/kg, was administered as an intravenous infusion weekly for the first 2 cycles and beginning with Cycle 3, every 2 weeks. Dexamethasone, 40 mg, was administered weekly on those weeks when elotuzumab was not administered. On weeks when elotuzumab was also given, participants received dexamethasone as a split dose of 28 mg, 3 to 24 hours before the elotuzumab infusion, and 8 mg intravenously at least 45 minutes before the infusion. Those patients with suboptimal response, defined as evidence of progressive disease between end of Cycle 2 and end of Cycle 4 or inability to achieve partial response or better by end of Cycle 4, also received cyclophosphamide, 50 mg. Cyclophosphamide could not be added beyond Cycle 5.

Arm type	Experimental
Investigational medicinal product name	Elotuzumab
Investigational medicinal product code	
Other name	BMS-901608, HuLuc63
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Elotuzumab 10 mg/kg was administered as an intravenous (IV) infusion weekly for the first 2 cycles and Q2W beginning with Cycle 3. Treatment was administered in 28-day cycles.

Investigational medicinal product name	Thalidomide
Investigational medicinal product code	
Other name	Thalomid®
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Thalidomide was administered by mouth (po) once daily (QD) and escalated from 50 mg for the first 2 weeks to 100 mg for the next 2 weeks and then to 200 mg starting with Cycle 2.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	Decadron®, Dexamethasone Intensol®, Dexpak®, Taperpak®
Pharmaceutical forms	Solution for injection/infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Dexamethasone was administered weekly as a 40-mg dose po on weeks without elotuzumab and as a split dose of 28 mg po 3-24 hours before the elotuzumab infusion and 8 mg Intravenously (IV) at least 45 minutes before the start of the infusion on weeks with elotuzumab.

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	Cytoxan, Endoxan, Neosar
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cyclophosphamide 50 mg po QD was added if the response to E-Td was suboptimal

Number of subjects in period 1^[1]	Thalidomide + Elotuzumab + Dexamethasone + Cyclophosphamide
Started	40
Received cyclophosphamide	11
Completed	0
Not completed	40
Consent withdrawn by subject	2
Disease progression	27
Study drug toxicity	1
Unrelated adverse event	7
Patient underwent autologous transplant	1
Moved to compassionate program	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Of 51 participants enrolled, 40 received treatment. Of those 40, 11 had cyclophosphamide added to their regimens.

Iron deficiency			
subjects affected / exposed	2 / 40 (5.00%)		
occurrences (all)	4		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 January 2013	Subjects who have not started study therapy will be required to have an LVEF of >50%. Additionally, all subjects will undergo an ECG at the start of each 28 day cycle and must have a QTc of < 480 msec in order to receive study drug. Additionally, subjects with more than 4 prior therapies for myeloma will also be excluded.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
