Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 December 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 December 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the activity of azacitidine and vorinostat combined therapy, in terms of overall response (OR) (complete remission (CR), complete remission with incomplete blood count recovery (CRi) and partial remission (PR), as defined by Cheson criteria) and overall survival (OS) in patients with relapsed AML who are ineligible for intensive chemotherapy.

Protection of trial subjects:

Analyses were supplied in confidence to an independent Data Monitoring Committee (DMC), who gave advice on whether the accumulated data from the trial, together with the results from other relevant research, justified the continuing recruitment of further patients. The DMC operated in accordance with a trial specific charter based upon the template created by the Damocles Group. The DMC could have considered recommending the discontinuation of the trial if the recruitment rate or data quality were unacceptable or if any issues were identified which may have compromised patient safety. The trial could also have stopped early if the interim analyses showed differences between treatments that were deemed to be convincing to the clinical community.

A Trial Steering Committee (TSC) provided overall supervision for the trial and provided advice through its independent chair.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 259
Worldwide total number of subjects	259
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	33
From 65 to 84 years	222
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

This trial recruited 259 patients from the UK with newly diagnosed, relapsed, or refractory AML/high risk MDS who were ineligible for intensive chemotherapy.

Pre-assignment

Screening details:

The following tests were performed during screening to ensure the patient was eligible and fit enough to participate in the trial: physical exam (including height, weight, blood pressure and spleen measurement), full blood count, biochemistry, bone marrow, ECG and a pregnancy test (if appropriate).

Period 1

Period 1 title	Baseline (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Azacitidine alone - control arm

Arm description:

Patients received azacitidine (75mg/m²) by subcutaneous injection on 7 consecutive days (excluding weekends), starting day 1 of 28-day cycles for up to 6 cycles. This was delivered in a 5-2-2 schedule.

Arm type	Active comparator
Investigational medicinal product name	Azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Azacitidine (75mg/m²) by subcutaneous injection on 7 consecutive days (excluding weekends), starting day 1 of 28-day cycles for up to 6 cycles. This should be delivered in a 5-2-2 schedule. Reconstituted azacitidine should be injected subcutaneously into the upper arm, thigh or abdomen. Injection sites should be rotated.

Arm title	Azacitidine + vorinostat
------------------	--------------------------

Arm description:

Patients received (75mg/m²) azacitidine by subcutaneous injection on 7 consecutive days (excluding weekends), starting day 1 of 28-day cycles for up to 6 cycles. Azacitidine should be delivered in a 5-2-2 schedule. Vorinostat (300mg bid) will be taken orally for 7 consecutive days starting on day 3 of each cycle in 28-day cycles for up to 6 cycles. Day 3 is defined as the 3rd day of azacitidine administration.

Arm type	Experimental
Investigational medicinal product name	Azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Azacitidine (75mg/m²) by subcutaneous injection on 7 consecutive days (excluding weekends), starting day 1 of 28-day cycles for up to 6 cycles. This should be delivered in a 5-2-2 schedule. Reconstituted azacitidine should be injected subcutaneously into the upper arm, thigh or abdomen. Injection sites should be rotated.

Investigational medicinal product name	Vorinostat
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Vorinostat (300mg bid) will be taken orally for 7 consecutive days starting on day 3 of each cycle in 28-day cycles for up to 6 cycles. Day 3 is defined as the 3rd day of azacitidine administration.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 May 2012	References to Phase I have been removed; vorinostat dose in combination with azacitidine has been stipulated as 300mg bid; monitoring of PT and INR for patients administered warfarin concomitantly with vorinostat; monitoring of serum glucose for patients administered vorinostat; bone marrow sample required for Leukaemic Stem Cell Quantification has been stipulated as at least 6mls; Adverse Event reporting relating to pregnancy includes requesting information to be collected from patients who become pregnant on trial as well as partners of patients who become pregnant whilst the patient is on trial.
03 January 2013	Primary outcome measure further clarified; exclusion criterion amended; screening assessment to include research bone marrow sample; azacitidine administration schedule is further clarified; sample collection section amended to include additional samples; patient follow up further clarified.
10 April 2013	Patient inclusion criteria amended to include patients with newly diagnosed, refractory AML and high risk MDS; IWG response criteria to be used for MDS; Females of childbearing potential to use contraception for 90 days after treatment discontinuation; Stratification will be used to randomise patients to treatment; Trial Steering Committee membership has been amended; Test for Primary Outcome Measure Analysis has been changed.
14 May 2014	AML response criteria has been modified to remove platelet and neutrophil count requirements for Partial Remission (PR) criteria (Appendix 8); Quality of Life questionnaire completion time-points have been clarified (monthly for the first 6 months and then at 12 and 24 months); Medical resource use data collection has been amended (data to be collected until 6 months follow up); Exclusion criteria amended, (removal of autologous haematopoietic stem cell transplant); Inclusion of home administration of azacitidine; Patients continuing beyond 6 cycles, treatment can be adjusted up to 6-weekly cycles at the discretion of the Investigator; Quality of Life questionnaire at screening has been removed (section 5.1); Treatment schedule has to be followed until treatment discontinuation; Blood biochemistry, haematology and bone marrow assessment results can be obtained locally if results are available (section 7.3); Follow up section amended; An aliquot from the blood sample will be sent for central HLA tissue typing and delivery method of samples has been amended (section 7.4.1); Adverse Event reporting has been amended (see section 8.1.1); Appendix 7 (IPSS table) corrected.
14 August 2014	The sample size calculation has been amended and the recruitment has been increased to 260 patients. A copy of the Quality of Life questionnaires are to be kept by sites.
28 November 2014	Requirement of sites to keep a copy of Quality of Life questionnaires has been removed. Additional wording of bone marrow samples to be sent every 3 cycles post cycle 6 (section 7.4.2). Adverse event reporting has been amended (section 8.1). Physical examination can be done within 7 days prior to start of cycle (section 7.3). Physical examination no longer required at end of treatment (section 7.2).
20 April 2015	Extension of study to 37 months. Patient's on 6 weekly cycles to have day 22 bloods on day 36. Change to dose modifications on the combined arm (section 7.5). Updated trial office contact details. Addition of wording to trial treatment regarding unit closures (section 7.1).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
