Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001229-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	08 September 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 June 2014
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

1. Part A main study: To assess the efficacy of BAY94-9027 in prevention and treatment of bleeding at different infusion schedules 2. Part A Optional Extension: To assess the long term safety of BAY94-9027 over at least 100 accumulated exposure days (ED) (main study plus extension) 3. Part B main study and extension: To assess the safety and efficacy of BAY94-9027 in the prevention of bleeding during major surgical procedures

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects and/or their legally authorized representative. Participating subjects and/or their legally authorized representative signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 April 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Worldwide total number of subjects	145
EEA total number of subjects	55

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	14
Adults (18-64 years)	131
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted in 2 parts: Part A (main study [36-week treatment period] and an optional extension [a minimum of 6 months and at least 100 total exposure days, or until marketing authorization of the drug]) and Part B (main study [up to 3 weeks] and extension [until the end of Part A extension]).

Pre-assignment

Screening details:

Of 149 subjects screened in Part A, 134 were treated and the reasons for non-inclusion of 15 patients were screen failure, consent withdrawal, and non-adherence to protocol visit windows. A total of 16 subjects (including 5 subjects from Part A) were enrolled and treated in Part B.

Period 1

Period 1 title	Part A
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	BAY94-9027 On-demand Treatment – Part A

Arm description:

On-demand treatment with BAY94-9027 as an intravenous (IV) infusion over a period of 1 to 15 minutes at a dose as indicated based upon location and severity of bleeds (maximum of 60 international units per kilogram [IU/kg]).

Arm type	Experimental
Investigational medicinal product name	Damoctocog alfa pegol
Investigational medicinal product code	BAY94-9027
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

On-demand treatment with BAY94-9027 as an IV infusion over a period of 1 to 15 minutes at a dose as indicated based upon location and severity of bleeds (maximum of 60 IU/kg).

Arm title	BAY94-9027 Prophylaxis Treatment – Part A
------------------	---

Arm description:

All subjects in the prophylaxis arms started BAY94-9027 IV infusion over a period of 1 to 15 minutes, with 2 times per week (2x/week) at a dose of 25-40 IU/kg for 10 weeks. Thereafter, only subjects with less than (<) 2 breakthrough (spontaneous, no identified trauma) joint and/or muscle bleeds qualified for random assignment to the less frequent dosing regimens. High bleeders continued 2x/week infusion. Subjects who qualified to be randomized, but enrolled after the every 5 day and every 7 day treatment arms were filled, remained on 2x/week treatment (2x/week 'forced' group).

Arm type	Experimental
Investigational medicinal product name	Damoctocog alfa pegol
Investigational medicinal product code	BAY94-9027
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

All subjects in the prophylaxis arms started with BAY94-9027 IV infusion over a period of 1 to 15 minutes, 2x/week at a dose of 25-40 IU/kg for 10 weeks. Thereafter, only subjects with <2 breakthrough (spontaneous, no identified trauma) joint and/or muscle bleeds qualified for random assignment to the less frequent dosing regimens. High bleeders continued 2x/week infusion. Subjects

who qualified to be randomized, but enrolled after the every 5 day and every 7 day treatment arms were filled, remained on 2x/week treatment (2x/week 'forced' group).

Number of subjects in period 1	BAY94-9027 On-demand Treatment – Part A	BAY94-9027 Prophylaxis Treatment – Part A
Started	20	114
Completed	18	108
Not completed	2	6
Consent withdrawn by subject	1	4
Adverse event, non-fatal	-	2
Unspecified	1	-

Period 2

Period 2 title	Part B
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	BAY949027 Treatment in Major Surgery - Part B
------------------	---

Arm description:

This reporting group included subjects who were treated in Part A and continued treatment in Part B, and subjects who were treated in Part B only. Subjects who underwent major surgery received BAY94-9027 IV infusion over a period of 1 to 15 minutes, for pre-surgical pharmacokinetic (PK) sampling, for surgery, and for the post-surgical period up to the time of discharge for a period not exceeding 3 weeks. Subjects were treated according to the type of procedure, using doses expected to maintain therapeutic levels of human coagulation factor VIII (FVIII) activity based upon pre-surgical PK measurements. The recommended maximum dose was 60 IU/kg. All treatments were administered as needed, and the dose was tailored to a subject's individual response.

Arm type	Experimental
Investigational medicinal product name	Damoctocog alfa pegol
Investigational medicinal product code	BAY94-9027
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects who underwent major surgery received BAY94-9027 IV infusion over a period of 1 to 15 minutes, for pre-surgical PK sampling, for surgery, and for the post-surgical period up to the time of discharge for a period not exceeding 3 weeks. Subjects were treated according to the type of procedure, using doses expected to maintain therapeutic levels of FVIII activity based upon pre-surgical PK measurements. The recommended maximum dose was 60 IU/kg. All treatments were administered as needed, and the dose was tailored to a subject's individual response.

Number of subjects in period 2^[1]	BAY949027 Treatment in Major Surgery - Part B
Started	16
Completed	14
Not completed	2
Dropped-out	2

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Not all the enrolled subjects were treated with study drugs. As baseline only included treated subjects, the worldwide number enrolled in the trial differs with the number of subjects reported in the baseline period.

Period 3

Period 3 title	Baseline period
Is this the baseline period?	Yes ^[2]
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	BAY94-9027 Treatment - Part A

Arm description:

This reporting group included both on-demand and prophylaxis arms treated with BAY94-9027 as an IV infusion over a period of 1 to 15 minutes in Part A, and included who continued treatment in Part B. On-demand arm: On-demand treatment at a dose as indicated based upon location and severity of bleeds (maximum of 60 IU/kg). Prophylaxis arm: All subjects in the prophylaxis arms started with 2x/week at a dose of 25-40 IU/kg for 10 weeks. Thereafter, only subjects with <2 breakthrough (spontaneous, no identified trauma) joint and/or muscle bleeds qualified for random assignment to the less frequent dosing regimens. High bleeders continued 2x/week infusion. Subjects who qualified to be randomized, but enrolled after the every 5 day and every 7 day treatment arms were filled, remained on 2x/week treatment (2x/week 'forced' group).

Arm type	Experimental
Investigational medicinal product name	Damoctocog alfa pegol
Investigational medicinal product code	BAY94-9027
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

BAY94-9027 as an IV infusion over a period of 1 to 15 minutes, and the dosage schedule as follows: On-demand arm: On-demand treatment at a dose as indicated based upon location and severity of bleeds (maximum of 60 IU/kg). Prophylaxis arm: All subjects in the prophylaxis arms started with 2x/week at a dose of 25-40 IU/kg for 10 weeks. Thereafter, only subjects with <2 breakthrough (spontaneous, no identified trauma) joint and/or muscle bleeds qualified for random assignment to the less frequent dosing regimens. High bleeders continued 2x/week infusion. Subjects who qualified to be randomized, but enrolled after the every 5 day and every 7 day treatment arms were filled, remained on 2x/week treatment (2x/week 'forced' group).

Arm title	BAY94-9027 Treatment in Major surgery - Part B Only
------------------	---

Arm description:

This reporting group included subjects who were treated in Part B only, and excluded subjects who were treated in Part A and continued treatment in Part B. Subjects who underwent major surgery received BAY94-9027 IV infusion over a period of 1 to 15 minutes, for pre-surgical PK sampling, for surgery, and

for the post-surgical period up to the time of discharge for a period not exceeding 3 weeks. Subjects were treated according to the type of procedure, using doses expected to maintain therapeutic levels of FVIII activity based upon pre-surgical PK measurements. The recommended maximum dose was 60 IU/kg. All treatments were administered as needed, and the dose was tailored to a subject's individual response.

Arm type	Experimental
Investigational medicinal product name	Damoctocog alfa pegol
Investigational medicinal product code	BAY94-9027
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects who underwent major surgery received BAY94-9027 IV infusion over a period of 1 to 15 minutes, for pre-surgical PK sampling, for surgery, and for the post-surgical period up to the time of discharge for a period not exceeding 3 weeks. Subjects were treated according to the type of procedure, using doses expected to maintain therapeutic levels of FVIII activity based upon pre-surgical PK measurements. The recommended maximum dose was 60 IU/kg. All treatments were administered as needed, and the dose was tailored to a subject's individual response.

Notes:

[2] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: This study was conducted in 2 parts, Part A and Part B. Hence, following periods (Parts A and B), a separate baseline period combining all the arms under Parts A and B, was created to report baseline characteristics.

Subject analysis set title	Part A Intent-To-Treat (ITT) Population
Subject analysis set type	Intention-to-treat
Subject analysis set description: Part A ITT population (N=132) included all the subjects who were enrolled into Part A of the study and received at least 1 dose of the study medication during Part A, and has subsequent infusion for either prophylaxis or bleed.	
Subject analysis set title	Part B Intent-To-Treat (ITT) Population
Subject analysis set type	Intention-to-treat
Subject analysis set description: Part B ITT population (N=14) included all the subjects who were enrolled into Part B of the study, received at least 1 dose of the study medication during Part B, and had undergone surgery.	
Subject analysis set title	Part B Safety Population

Subject analysis set type	Safety analysis
Subject analysis set description: Part B Safety population (N=16) included all subjects who received at least 1 dose of study drug during Part B of the study.	
Subject analysis set title	Pharmacokinetic Analysis Set (PKS)
Subject analysis set type	Sub-group analysis
Subject analysis set description: PKS (N=22) included all subjects with a valid profile of BAY94-9027 during Part A of the study.	
Subject analysis set title	BAY94-9027 Treatment – Part A, Week 36
Subject analysis set type	Sub-group analysis
Subject analysis set description: This reporting group (N=15) included all PKS subjects treated with multiple doses (last dose paired) of BAY94-9027 as an IV infusion over 10 minutes at Week 36. Paired data were defined as the single dose data for the sub-set of subjects who also had multiple dose PK data.	
Subject analysis set title	BAY94-9027 Treatment – Part A, Week 0
Subject analysis set type	Sub-group analysis
Subject analysis set description: This reporting group (N=22) included all PKS subjects treated with a single (first) dose of BAY94-9027 as an IV infusion over 10 minutes at Week 0.	
Subject analysis set title	Part A Safety Population
Subject analysis set type	Safety analysis
Subject analysis set description: Part A Safety population (N=134) included all subjects who received at least 1 dose of study drug during Part A of the study.	

Primary: Annualized Number of Total Bleeds in On-demand Treatment arm (Weeks 0 -36) and Prophylaxis arm (Weeks 10 - 36, excluding rescue bleeds) – Part A

End point title	Annualized Number of Total Bleeds in On-demand Treatment arm (Weeks 0 -36) and Prophylaxis arm (Weeks 10 - 36, excluding rescue bleeds) – Part A ^[1]
End point description: Annualized number of total bleeds was defined as the annualized sum of spontaneous bleeds and trauma bleeds.	
End point type	Primary
End point timeframe: On-demand: Weeks 0 -36 and Prophylaxis: Weeks 10 - 36 during Part A	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics were done, no inferential statistical analyses were performed.

Secondary: Physician's Assessment of Adequacy of Hemostasis in Major Surgery – Part B

End point title	Physician's Assessment of Adequacy of Hemostasis in Major Surgery – Part B
-----------------	--

End point description:

Major surgery was defined as any surgical or invasive procedure (elective or emergent) in which the overall bleeding risk was excessive, required a general anesthetic in an individual without a bleeding disorder, penetrated or exposed a major body cavity, resulted in substantial impairment of physical or physiological functions, or required special anatomic knowledge or manipulative skill. Adequacy of hemostasis was assessed as excellent, good, moderate or poor, by the Physician during Part B of the study. No subjects were assessed as moderate or poor.

Secondary: Change From Baseline in Overall Pain Severity and Interference due to Pain at Week 36 – Part A

End point title	Change From Baseline in Overall Pain Severity and Interference due to Pain at Week 36 – Part A
-----------------	--

End point description:

Brief Pain Inventor (BPI) – Short Form (BPI-SF) was a 15-item, self-administered, clinically valid, reliable and responsive measure developed to assess pain. BPI-SF was typically scored by averaging the pain severity score and overall pain interference score. Scores ranged from 0 to 10 and a higher score indicates a higher level of pain/interference. Mean change from baseline was reported in the below table. In the listed categories below, 'N' signifies the number of subjects evaluable for this outcome.

Secondary: Change From Baseline in Work Productivity and Activity Impairment (WPAI) Questionnaire at Week 36 – Part A

End point title	Change From Baseline in Work Productivity and Activity Impairment (WPAI) Questionnaire at Week 36 – Part A
-----------------	--

End point description:

The WPAI is a validated instrument to assess the effect of hemophilia on ability to work, attend classes, and perform regular daily activities in subjects aged 12 and above. The WPAI also contained classroom impairment questions (CIQ). The questionnaire was self-administered and comprised of nine questions that elicited information on work, classroom, and daily activity impairment during the previous seven days. WPAI outcomes that are overall work and activity impairment, transformed to impairment percentages (range from 0 to 100), with higher numbers indicating greater impairment and less productivity. In the listed categories below, 'N' signifies the number of subjects evaluable for this outcome.

Reporting groups

Reporting group title	BAY94-9027 on-demand treatment - Part A
-----------------------	---

Reporting group description:

Subjects in on-demand treatment received BAY94-9027 as an intravenous (IV) infusion over a period of 1 to 15 minutes at a dose as indicated based upon location and severity of bleeds (maximum of 60 IU/kg (international units per kilogram)).

Reporting group title	BAY94-9027 treatment in Major surgery - Part B
-----------------------	--

Reporting group description:

Subjects who underwent major surgery received BAY 94-9027 IV infusion over a period of 1 to 15 minutes, for pre-surgical pharmacokinetic (PK) sampling, for surgery, and for the post-surgical period up to the time of discharge for a period not exceeding 3 weeks. Subjects were treated according to the type of procedure, using doses expected to maintain therapeutic levels of human coagulation factor VIII (FVIII) activity based upon pre-surgical PK measurements. The recommended maximum dose was 60 IU/kg. All treatments were administered as needed, and the dose was tailored to a subject's individual response.

Reporting group title	BAY94-9027 prophylaxis treatment - Part A
-----------------------	---

Reporting group description:

Subjects in prophylaxis treatment started BAY94-9027 IV infusion over a period of 1 to 15 minutes, with 2 times per week (2x/week) at a dose of 25-40 IU/kg for 10 weeks. Thereafter, only subjects with less than 2 breakthrough (spontaneous, no identified trauma) joint and/or muscle bleeds qualified for random assignment to the less frequent dosing regimens. High bleeders continued 2x/week infusion. Subjects who qualified to be randomized, but enrolled after the every 5 day and every 7 day treatment arms were filled, remained on 2x/week treatment (2x/week forced group).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 April 2012	Implemented changes and clarifications secondary to the recommendations of regulatory agencies and in response to specific questions and comments received from pediatric specialists and investigators. The primary revision was a prolongation of the total treatment period from 32 to 36 weeks allowing for a longer observation period after subjects in the prophylaxis treatment arm had been randomized to a less frequent infusion schedule. Stopping rules in the event of inhibitor development were defined and a scheduled data monitoring committee review of the efficacy and safety of BAY94-9027 in the prophylaxis arms was added to occur after approximately 20 subjects had completed 2 months of treatment following randomization. The objectives were modified to clarify that inhibitor development was a specific important safety outcome and an additional laboratory assessment was added to measure possible peak antibody response following the first dose of BAY94-9027. Minor changes included clarification of the time points for PK assessments, the duration of wash-outs required for specific observations, and definition of objective criteria to assess efficacy of surgical interventions. The efficacy variables for Part A were categorized to aid understanding of the outcomes being assessed.
13 December 2012	Added an optional extension to allow subjects to continue treatment with BAY94-9027 after completion of Part A of the main study. Text was added to more fully define for investigators the effects of the longer half-life of BAY94-9027 on the intervals required for repeat and follow-up infusions for the treatment of bleeds, and additional information for situations when local monitoring of FVIII may have been obtained, including clarification of the reagents that may have been used. Information regarding the available vial sizes, storage, and use of BAY94-9027 was updated.
25 March 2014	The purpose of the amendment was to add to the protocol an optional extension of Part B to allow subjects to continue to undergo major surgeries using BAY94-9027 during the Part A extension and after ten Part B subjects had completed major surgery.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

"±" in relation with geometric CV is auto-generated. Decimal places automatically truncated. Patient satisfaction & burden were not reported due to concerns regarding instrument development & validation, and translation error in 2 questionnaire items.

Notes:
