## General information about the trial

Main objective of the trial:

To compare the invasive disease-free survival (IDFS) after neo- / adjuvant chemotherapy with EnPC or dtEC-dtD in patients with early node-positive or high-risk node-negative breast cancer.

Protection of trial subjects:

The trial protocol including amendments, the patient information and the informed consent were reviewed and approved from a properly constituted IRB/IEC for each site prior to the study start. The trial was in compliance with the International Conference on Harmonization (ICH) - Harmonized Tripartite Guideline for Good Clinical Practice (GCP) (E6), and the Commission Directives in the European Community as well as with the applicable German national laws and regulations, and with Declaration of Helsinki and its revisions in all aspects of preparation, monitoring, reporting, auditing, and archiving. IDMC was to ensure the ethical conduct of the trial and to protect patients' safety interests in this study.

Analysis of safety and compliance to treatment was performed based on patients who were randomized and received at least once study treatment (2857 patients).

For safety and compliance, patients were analyzed according to the treatment which they actually received. One patient randomized to the dtEC-dtD arm was treated in the EnPC arm and was therefore analyzed in the EnPC arm in all safety analyses (safety set: EnPC: 1430 patients; dtEC-dtD: 1427 patients).

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 October 2012	The study protocol was amended to implement a change in the inclusion criteria. The definition of high risk breast cancer was expanded to also include patients with luminal A like tumors and 4 or more involved lymph nodes.
19 December 2012	The study protocol and informed consent form (ICF) were amended to implement changes in the design of the run-in phase. The number of patients additionally recruited into each dose-level to avoid interruption of accrual was increased from 10 to 20.
28 April 2016	Amendment 3 was a substantial amendment of the study protocol and ICF to open GAIN-2 for the neoadjuvant setting due to slow accrual. While endpoints of the study remained unchanged, an additional stratification factor was added (neoadjuvant vs adjuvant chemotherapy) and HER2-positive patients were now allowed to receive dual anti-HER2-blockade (Pertuzumab + Trastuzumab). Corresponding changes were implemented in all parts of the protocol.
