Clinical trial results:
A Two Year, Multicenter, Randomized, Double-blind, Placebo-controlled, Parallel Group Trial to Evaluate Efficacy, Safety, Tolerability, and Pharmacokinetics of Teriflunomide Administered Orally Once Daily in Pediatric Patients With Relapsing Forms of Multiple Sclerosis Followed by an Open-label Extension

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMEA-001094-PIP01-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	13 October 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	06 October 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the effect of teriflunomide in comparison to placebo on disease activity as measured by time to first clinical relapse after randomisation in children and adolescents 10 to 17 years of age with relapsing forms of multiple sclerosis.

Protection of trial subjects:

The study was conducted by investigators experienced in the treatment of paediatric patients. The parent(s) or guardian(s) as well as the children were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time. In addition to the consent form for the parent(s)/guardian(s), an assent form in child-appropriate language was provided and explained to the child. Repeated invasive procedures were minimised. The number of blood samples as well as the amount of blood drawn were adjusted according to age and weight. A topical anesthesia might have been used to minimise distress and
discomfort.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 July 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study was conducted at 57 active centres in 21 countries. A total of 185 subjects were screened between 16 July 2014 and 27 December 2017, of which 166 subjects were enrolled and randomised. A total of 19 subjects failed screening mainly due to meeting exclusion criteria.

Pre-assignment

Screening details:

Subjects were randomly assigned to receive either teriflunomide or placebo in a 2:1 ratio via Interactive Voice Response System. Randomisation was stratified by the country and subject's pubertal status.

Period 1

Period 1 title	Double-blind Period (up to week 96)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received placebo matching to teriflunomide tablet orally once daily (QD) for 96 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

A single tablet of placebo (matched to teriflunomide) was administered orally QD with or without food in the morning preferably at the same time each day of the double-blind treatment period (i.e., 96 weeks).

Arm title	Teriflunomide

Arm description:

Subjects received 1 Teriflunomide tablet, 3.5 milligrams (mg) (in case of body weight [BW] up to 40 kilograms [kg]) or 7 mg (in case of BW greater than [>]40 kg) orally QD for 8 weeks. After 8 weeks, based on subjects predicted pharmacokinetic (PK) parameters, teriflunomide was administered in following manner up to 96 weeks:if predicted PK parameters less than or equal to (<=)95th percentile of adult range after 7 mg QD:1 tablet of 7 mg daily (for BW up to 40 kg) or 1 tablet of 14 mg daily (for BW>40 kg);or if predicted PK parameters >95th percentile of adult range:1 tablet of 3.5 mg daily (for BW up to 40 kg) or 1 tablet of 7 mg daily (for BW>40 kg). The adult range (5th-95th percentile) of predicted steady state PK parameters for 7 mg dose was defined as maximum concentration observed (Cmax) ranging from 8.03 to 49.10 micrograms per millilitre (mcg/mL) and area under the curve from time 0 hour to 24 hours (AUC0-24) ranging from 184 to 1160 micrograms*hour per millilitre (mcg*h/mL).

Arm type	Experimental
Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	AUBAGIO, HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide (3.5 mg or 7 mg or 14 mg) film-coated tablet was administered orally QD with or without food in the morning preferably at the same time each day of the double-blind treatment period (i.e., 96

weeks).

Number of subjects in period 1	Placebo	Teriflunomide
Started	57	109
Completed	53	102
Not completed	4	7
Consent withdrawn by subject	2	-
Adverse Event	-	6
Lack of efficacy	2	1

Period 2

Period 2 title	Open Label Period (up to week 192)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/Teriflunomide

Arm description:

Subjects previously treated with placebo during the double blind (DB) period received 1 teriflunomide tablet 3.5 mg (BW<=40 kg) or 7 mg teriflunomide (BW >40 kg) for first 8 weeks. After 8 weeks if predicted PK parameter was <= 95th percentile of adult range then subjects received 7 mg teriflunomide (BW<=40 kg) and 14 mg teriflunomide (BW>40 kg) in the open label (OL) period for 96 weeks (i.e., up to Week 192). The adult range (5th-95th percentile) of predicted steady state PK parameters for 7 mg dose was defined as Cmax ranging from 8.03 to 49.10 mcg/mL and AUC0-24 ranging from 184 to 1160 mcg*h/mL.

Arm type	Experimental
Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	AUBAGIO, HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide (3.5 mg or 7 mg or 14 mg) film-coated tablet was administered orally QD with or without food in the morning preferably at the same time each day.

Arm title	Teriflunomide / Teriflunomide

Arm description:

Subjects previously treated with Teriflunomide during DB period continued receiving Teriflunomide in the

OL period for additional 96 weeks (i.e., up to Week 192).

Arm type	Experimental
Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	AUBAGIO, HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide (3.5 mg or 7 mg or 14 mg) film-coated tablet was administered orally QD with or without food in the morning preferably at the same time each day.

Number of subjects in period 2[1]	Placebo/Teriflunomide	Teriflunomide / Teriflunomide
Started	52	100
Completed	31	73
Not completed	21	27
Adverse Event	7	5
Other reason	4	7
Poor compliance to protocol	-	1
Lack of efficacy	10	14

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.
Justification: Post completion of DB period, only eligible subjects entered OLE period.

Primary: Time to First Confirmed Clinical Relapse

End point title	Time to First Confirmed Clinical Relapse

End point description:

Time to first clinical relapse:duration (in weeks) between randomisation & first confirmed clinical relapse. Clinical relapses:new/recurrent neurological symptoms not associated with fever/infection, lasted at least 24 hours & accompanied by new objective neurological findings upon neurological examination & documented by standardised, quantified functional system score (FSSs) which included 8 items:rated on different scales:brain stem, cerebellar & cerebral functions rated on scale of 0 to 5;visual, pyramidal, sensory & bowel/bladder rated on scale of 0 to 6 & ambulation on scale of 0 to 12 where higher score in each scale indicated worsened neurological function. Confirmed clinical relapse were reviewed & confirmed by independent Relapse Adjudication Panel. Subject without confirmed clinical relapse;considered as clinical relapse free until end of Week 96. Analysed on Intent-to-treat (ITT) population:all randomised subjects analysed according to treatment allocated by randomisation.

End point type	Primary

Statistical analyses

Statistical analysis title	Teriflunomide versus Placebo

Statistical analysis description:

Hazard ratio (HR) was estimated using a Cox proportional-hazards model with factors for treatment group, region, pubertal status, age, and number of relapses in the year prior to randomisation as covariates and with robust variance estimation. Derived from log-rank test with stratification of region and pubertal status.

Comparison groups	Placebo v Teriflunomide

Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.2949 [1]
Method	Stratified Log-Rank test

Secondary: Probability of Subjects Who Were Clinical Relapse Free at Weeks 24, 48, 72, 96, 120, 144, 168 and 192

End point title	Probability of Subjects Who Were Clinical Relapse Free at Weeks 24, 48, 72, 96, 120, 144, 168 and 192

End point description:

Subject was considered free of clinical relapse if the subject had no confirmed clinical relapse before treatment discontinuation/completion in 192 weeks treatment period. Clinical relapses: new/recurrent neurological symptoms not associated with fever/infection, lasted at least 24 hours, & accompanied by new objective neurological findings upon neurological examination & documented by standardised, quantified FSSs which included 8 items: rated on different scales: brain stem, cerebellar & cerebral functions rated on scale of 0 to 5; visual, pyramidal, sensory & bowel/bladder rated on scale of 0 to 6 & ambulation on scale of 0 to 12, where higher score in each scale indicated worsened neurological function. New/recurrent symptoms occurred less than 30 days following onset of relapse were considered part of same relapse. Probability of subjects who were clinical relapse free at specified weeks was estimated by Kaplan-Meier method and reported. Analysed on efficacy population.

End point type	Secondary

Secondary: Magnetic Resonance Imaging (MRI) Assessment: Number of New or Enlarged T2 Lesions Per MRI Scan

End point title	Magnetic Resonance Imaging (MRI) Assessment: Number of New or Enlarged T2 Lesions Per MRI Scan

End point description:

Number of new or enlarged T2 lesions per scan was defined as the total number of new or enlarged T2 lesion that occurred during the 192 weeks treatment period divided by the total number of scans performed during 192 weeks. To account for the different numbers of scans performed among the subjects, a negative binomial regression model with robust variance estimation was used. The model included the total number of new or enlarged T2-lesions as the response variable, with treatment group, region, pubertal status and age as covariates and log-transformed number of scans as an offset variable. Analysis was performed on efficacy population which included all subjects enrolled and treated with at least 1 dose of teriflumomide in OL period analysed according to the treatment group allocated by randomisation in the DB period.

Secondary: Cognitive Assessment: Change From Baseline in Brief Visuospatial Memory Test-Revised (BVMT-R) Scores at Weeks 96 and 192

End point title	Cognitive Assessment: Change From Baseline in Brief Visuospatial Memory Test-Revised (BVMT-R) Scores at Weeks 96 and 192

End point description:

The BVMT consists of three trials in which subjects must recall shapes by drawing figures on a blank page (response booklet) after being given the opportunity to memorise the figures (given in BMVT-R form) for 10 seconds. BMVT-R form consists of six figures. Points are awarded based on the accuracy of the drawn figure and by correct placement on the blank page. A minimum of 0 to 12 points/scores are awarded per trial, so a subject can score between 0 and 36 points for all three trials (by adding the points/score from each trial), where higher score indicates better outcome. Analysis was performed on ITT population which included all randomised subjects analysed according to the treatment group allocated by randomization . Here, 'number of subject analysed' = number of subjects evaluable for this endpoint and "n"= subjects evaluable for each specified category.

End point title	Cognitive Assessment: Change From Baseline in Trail Making Test- Part A (TMT-A) Test Scores (in Seconds) at Weeks 96 and 192

End point description:

'Trail Making Test Part A' is a neuropsychological test of visual attention and task switching. The task requires a subject to 'connect-the-dots' of 25 consecutive numbers (1, 2, 3,etc.) in sequential order on a sheet of paper or computer screen. The goal of the subject is to finish the test as quickly as possible, and the time taken to complete the test used as the primary performance metric (in seconds). This is a timed test and the number of seconds to complete the task is recorded. Maximum time allowed is 300 seconds. A lower score indicated better cognitive function. Analysis was performed on efficacy population. Here, 'number of subjects analysed' = number of subjects evaluable for this endpoint and "n"= number of subjects evaluable for each specified category.

End point title	Cognitive Assessment: Change From Baseline in Beery Visual-motor Integration (BVMI) Scores at Weeks 96 and 192

End point description:

The Beery VMI is a non-verbal assessment that assessed the extent to which individuals can integrate their visual and motor abilities. The subjects were provided with geometric designs ranging from simple line drawings to more complex figures and were asked to copy the designs. The test consisted of 24 figures. One point was scored for each successful copy of drawings and no scoring was given when the subject failed to copy the drawings properly. Each successful copying of drawings was summed up and the total was scored on a scale ranged from 0 to 24, where higher score indicated better visual construction skills/better visual and motor abilities and lower score indicated poor visual construction skills/poor visual and motor abilities. Analysis was performed on efficacy population. Here, "number of subjects analysed" = subjects evalauble for this endpoint and 'n’ = number of subjects evaluable for each specified category.

End point title	Cognitive Assessment: Change From Baseline in Delis-Kaplan Executive Function System (D-KEFS) Letter Fluency Total Correct Raw Score at Weeks 96 and 192

End point description:

Letter fluency is a condition measured in Delis-Kaplan Executive Function System (D-KEFS). Subjects are asked to name as many words as they can, starting with a specified letter for 60 seconds. The words cannot be names, places, numbers or grammatical variants of previous answers. Repeated answers are not scored as a correct response. There are 3 trials, with 3 different letters. The total number of correct responses is totaled for all 3 trials and a letter fluency score is given. A higher score is considered better. There is no set range as the score depends on how many correct words the subject relays in the given time period. Analysis was performed on efficacy population. Here, "number of subjects analysed"= number of subjects evaluable for this endpoint. Here, 99999 was used as a space filler which specifies that the standard deviation was not calculated, since only 1 subject was assessed.

End point title	Cognitive Assessment - Selective Reminding Test (SRT): Change From Baseline in Total Number of Words on Delayed Recall at Weeks 96 and 192

End point description:

SRT is a test to assess verbal learning and memory. During the administration of the SRT only the examiner and the subject should be in the testing room. A list of twelve words is read aloud by the examiner at a rate of one word per two seconds. The subject is asked to recall all twelve words after a 30 minute delay. Only the words that are missed on the preceding trial are given in the consecutive trial. The total score represents a sum score of total 6 trials, therefore the range is from 0-72. The lower the value the worse the outcome, higher value indicates better recall. Analysis was performed on efficacy population. Here, "number of subjects analysed"= subjects evaluable for this endpoint and "n"= number of subjects evaluable for each specified category. Here, "99999" was used as a space filler and specified that the standard deviation was not calculated, since only 1 subject was assessed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AEs) were collected from first dose of study drug up to 96 weeks (for DB period arms) and from first dose of drug in OLE period up to Week 192 (for OLE period arms).

Adverse event reporting additional description:

Reported AEs were treatment-emergent AEs (TEAEs), which developed/worsened during TEAE period (defined as time from 1st intake of investigational medicinal product (IMP) to last intake of IMP in OL period). Safety population included all randomised subjects exposed to study medication, regardless of the amount of treatment administered.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	24.0

Reporting groups

Reporting group title	Double-Blind treatment period: Placebo

Reporting group description:

Subjects received placebo matching to teriflunomide tablet orally QD for 96 weeks.

Reporting group title	Double-Blind treatment period: Teriflunomide

Reporting group description:

Subjects received 1 Teriflunomide tablet, 3.5 mg (in case of BW up to 40 kg) or 7 mg (in case of BW >40 kg) orally QD for 8 weeks. After 8 weeks, based on subjects predicted PK parameters, teriflunomide was administered in following manner up to 96 weeks: if predicted PK parameters <=95th percentile of adult range after 7 mg QD: 1 tablet of 7 mg daily (for BW up to 40 kg) or 1 tablet of 14 mg daily (for BW>40 kg);or if predicted PK parameters >95th percentile of adult range:1 tablet of 3.5 mg daily (for BW up to 40 kg) or 1 tablet of 7 mg daily (for BW>40 kg). The adult range (5th-95th percentile) of predicted steady state PK parameters for 7 mg dose was defined as Cmax ranging from 8.03 to 49.10 mcg/mL and AUC0-24 ranging from 184 to 1160 mcg*h/mL.

Reporting group title	Open-Label treatment period: Placebo/Teriflunomide

Reporting group description:

Subjects previously treated with placebo during the DB period received 1 teriflunomide tablet 3.5 mg (BW<=40 kg) or 7 mg teriflunomide (BW >40 kg) for first 8 weeks. After 8 weeks if predicted PK parameter was <= 95th percentile of adult range then subjects received 7 mg teriflunomide (BW<=40 kg) and 14 mg teriflunomide (BW>40 kg) in the OL period for 96 weeks (i.e., up to Week 192). The adult range (5th-95th percentile) of predicted steady state PK parameters for 7 mg dose was defined as Cmax ranging from 8.03 to 49.10 mcg/mL and AUC0-24 ranging from 184 to 1160 mcg*h/mL.

Reporting group title	Open-Label treatment period: Teriflunomide/ Teriflunomide

Reporting group description:

Subjects previously treated with Teriflunomide during DB period continued receiving Teriflunomide in the OL period for additional 96 weeks (i.e., up to Week 192).

Tonsillitis subjects affected / exposed occurrences (all)	4 / 100 (4.00%) 5		
Tracheitis subjects affected / exposed occurrences (all)	0 / 100 (0.00%) 0		
Tracheobronchitis subjects affected / exposed occurrences (all)	0 / 100 (0.00%) 0		
Upper Respiratory Tract Infection subjects affected / exposed occurrences (all)	22 / 100 (22.00%) 59		
Urinary Tract Infection subjects affected / exposed occurrences (all)	5 / 100 (5.00%) 5		
Metabolism and nutrition disorders Decreased Appetite subjects affected / exposed occurrences (all)	3 / 100 (3.00%) 3		
Vitamin D Deficiency subjects affected / exposed occurrences (all)	4 / 100 (4.00%) 4		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 December 2013	Following changes were made: 1 MRI added at Weeks 24, 48 and 96 to strengthen MRI data; 1 MRI added at Week 36 in case of at least 5 new/enlarged T2 lesions; change in volume of T2 lesions, change in volume of T1 hypointense lesions, number of new T1 hypointense lesions, and brain atrophy were added and grouped as MRI endpoints; addition of immunoglobulin (IgG, IgM, and IgA) measurements at Baseline and every 24 weeks, aimed to provide additional information on a potential, although not expected, effect of teriflunomide on the immune system in this age group; poisson regression model changed in negative binomial model for the analysis of the number of new or enlarged T2-lesions and the number of T1 Gd-enhancing lesions per MRI scan. Reduced the impact of potential outliers, ordinal logistic regression model including treatment group, region, pubertal status, and age were also used to analyse these endpoints. The Poisson regression model with a robust error variance was to be used in sensitivity analyses.
26 June 2014	Following changes were made: Extension of the open-label period up to 192 weeks after randomisation; one MRI timepoint added at Week 72; addition of a criterion for switch into open-label period taking this additional MRI scan into account as follows: at least 5 new/enlarged T2 lesions on each of the 2 consecutive MRI scans of Week 48 and Week 72; change in exclusion criteria: the required minimum washout period duration for previous multiple sclerosis (MS) treatment was modified; addition of exclusion criteria: previous treatment with alemtuzumab; addition of a note about the content of teriflunomide tablets (lactose) and that therefore, investigators were to consider whether history of lactose intolerance could affect treatment tolerability; addition of a note about contraception and the association of local additional requirements (United Kingdom) to be followed, e.g., spermicidal foam/gel/film/cream/suppository, as per medicines and healthcare products regulatory agency rules; addition of endpoints: proportion of subjects free of new or enlarged MRI T2-lesions at Weeks 48 and 96. It was specified that the main MRI endpoints were the number of new/newly enlarged T2 lesions and the number of T1 Gd-enhancing T1 lesions; proportion of disease-free subjects as an exploratory endpoint; addition of text to introduce the rationale for placebo-controlled design; addition of endocrine function evaluation consisting of measurement of thyroid stimulating hormone (TSH) every 24 weeks and at end of treatment (EOT); addition of text to specify that local anesthetic was to be offered for blood draws to minimise pain and discomfort; correction of text: Pre-defined adverse events and laboratory abnormalities for specific reporting to restore the instructions that were included in the initial protocol but had been inadvertently taken out in Amended protocol 1.
10 December 2020	Following changes were done: Added specifications about weight and electrocardiogram during remote visits and reference to appendix G. Added text in case of emergency and reference to appendix G. Added IMP return specification and reference to appendix G. Added text in case of emergency and reference to appendix G. Added text in case of missing assessment and reference to Appendix G. Added cross references to sections. Added text on permanently discontinuation for subjects close to the end of treatment may be unable to continue their final treatment as scheduled. Added monitoring details, techniques, and source data verification. Added summaries of the 3 memos to detail the procedures set up in case of emergency.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
