Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 June 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	22 May 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of lisdexamfetamine dimesylate 70 milligram (mg) compared with osmotic controlled oral release delivery system-methylphenidate (OROS-MPH) 72 mg in adolescents (13-17 years of age, inclusive) with ADHD.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation of Good Clinical Practice, the principles of the Declaration of Helsinki, as well as other applicable local ethical and legal requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 April 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 493
Country: Number of subjects enrolled	Canada: 25
Country: Number of subjects enrolled	European Union: 31
Worldwide total number of subjects	549
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	549
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 77 sites in the United States, Canada, and Europe.

Pre-assignment

Screening details:

Of the 778 screened subjects, 229 were screen failures and 549 were randomized to treatment. A total of 547 subjects were treated and the reasons for 2 'randomized but not treated' subjects included withdrawal by 1 subject in the Methylphenidate group and 1 subject with a protocol violation in the Lisdexamfetamine group.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

2 placebo over encapsulated capsules once daily orally for 6 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

2 placebo over encapsulated capsules once daily orally for 6 weeks.

Arm title	Lisdexamfetamine dimesylate
------------------	-----------------------------

Arm description:

Lisdexamfetamine dimesylate (LDX, Vyvanse®, SPD489) 30 to 70 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule for 4 weeks (forced dose titration), followed by LDX 70 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule for 2 weeks (dose maintenance).

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

2 placebo over encapsulated capsules once daily orally for 6 weeks.

Investigational medicinal product name	Lisdexamfetamine dimesylate
Investigational medicinal product code	SPD489
Other name	Elvanse, Tyvense, Vyvanse, LDX
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Lisdexamfetamine dimesylate (LDX, Vyvanse®, SPD489) 30 to 70 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule for 4 weeks (forced dose titration), followed by LDX 70 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule for 2 weeks (dose maintenance).

Arm title	Methylphenidate
------------------	-----------------

Arm description:

Methylphenidate (Concerta, OROS-MPH) 18 to 72 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule (no placebo administered when methylphenidate 72 mg [2*36 mg capsules] was administered) for 4 weeks (forced dose titration), followed by methylphenidate 72 mg (2*36 mg capsules) over encapsulated capsule once daily orally for 2 weeks (dose maintenance).

Arm type	Active comparator
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

2 placebo over encapsulated capsules once daily orally for 6 weeks.

Investigational medicinal product name	Methylphenidate
Investigational medicinal product code	
Other name	Concerta, OROS-MPH
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Methylphenidate (Concerta, OROS-MPH) 18 to 72 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule (no placebo administered when methylphenidate 72 mg [2*36 mg capsules] was administered) for 4 weeks (forced dose titration), followed by methylphenidate 72 mg (2*36 mg capsules) over encapsulated capsule once daily orally for 2 weeks (dose maintenance).

Number of subjects in period 1^[1]	Placebo	Lisdexamfetamine dimesylate	Methylphenidate
Started	110	218	219
Completed	97	181	186
Not completed	13	37	33
Consent withdrawn by subject	1	9	6
Protocol violation	3	3	3
Adverse event	1	15	14
Unspecified	3	4	3
Lost to follow-up	1	3	6
Lack of efficacy	4	3	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Not all enrolled subjects were treated with study drugs. Since baseline period included only treated subjects, the worldwide number enrolled in the trial differs with the number of subjects reported

in the baseline period.

Baseline characteristics

Reporting groups

Reporting group title	Placebo
Reporting group description: 2 placebo over encapsulated capsules once daily orally for 6 weeks.	
Reporting group title	Lisdexamfetamine dimesylate
Reporting group description: Lisdexamfetamine dimesylate (LDX, Vyvanse®, SPD489) 30 to 70 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule for 4 weeks (forced dose titration), followed by LDX 70 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule for 2 weeks (dose maintenance).	
Reporting group title	Methylphenidate
Reporting group description: Methylphenidate (Concerta, OROS-MPH) 18 to 72 mg over encapsulated capsule once daily orally along with placebo over encapsulated capsule (no placebo administered when methylphenidate 72 mg [2*36 mg capsules] was administered) for 4 weeks (forced dose titration), followed by methylphenidate 72 mg (2*36 mg capsules) over encapsulated capsule once daily orally for 2 weeks (dose maintenance).	

Reporting group values	Placebo	Lisdexamfetamine dimesylate	Methylphenidate
Number of subjects	110	218	219
Age categorical			
Age was calculated as the difference between date of birth and date of informed consent. The Safety set consisted of all subjects in the Randomized set (all screened subjects for whom a randomization number was generated) who took at least 1 dose of investigational product.			
Units: Subjects			
Less Than or Equal to 18 Years	110	218	219
Between 18 and 65 Years	0	0	0
Greater Than or Equal to 65 Years	0	0	0
Age continuous			
Age was calculated as the difference between date of birth and date of informed consent. Safety set.			
Units: years			
arithmetic mean	14.7	14.6	14.7
standard deviation	± 1.37	± 1.38	± 1.42

Combined Subtype	68	146	144
Clinical Global Impressions – Severity of Illness (CGI-S)			
The Clinical Global Impressions Scale permits a global evaluation of the subject's severity of illness and improvement over time. The scale includes a severity of illness item and a global improvement item. The investigator performed the CGI-S to rate the severity of a subject's condition on a 7-point scale			

(1=normal, not at all ill; 2=borderline mentally ill; 3=mildly ill; 4=moderately ill; 5=markedly ill; 6=severely ill; or 7=extremely ill).

Safety set.

Units: Subjects			
Borderline mentally ill	1	0	0
Mildly ill	2	4	1
Moderately ill	60	93	115
Markedly ill	41	106	90
Severely ill	6	15	13

Attention-deficit/Hyperactivity Disorder Rating Scale-IV (ADHD-RS-IV) Total Score

The ADHD-RS-IV was developed to measure the behaviors of children with ADHD and is commonly used in clinical studies of ADHD. The ADHD-RS-IV consisted of 18 items designed to reflect current symptomatology of ADHD based on Diagnostic and Statistical Manual of Mental Disorders, 4th Edition-Text Revision (DSM-IV-TR) criteria. Each item was scored on a 4-point scale ranging from 0 (reflecting no symptoms) to 3 (reflecting severe symptoms) with total scores ranging from 0-54, Higher score = more severe symptoms.

Safety set.

Units: Units on a scale			
arithmetic mean	36.1	37.2	36.9
standard deviation	± 5.91	± 6.46	± 6.42

Statistical analyses

Statistical analysis title	Lisdexamfetamine versus Methylphenidate
Statistical analysis description:	
The least squares mean (LSM), the difference in LSM and its 95% confidence interval (CI), and the p-value were from a mixed effects model for repeated measures that included treatment group, visit, interaction of the treatment group with the visit as factors, baseline score as a covariate, and an adjustment for the interaction of the baseline score with the visit. The model was based on Restricted maximum likelihood (REML) method of estimation and utilized an unstructured covariance.	
Comparison groups	Lisdexamfetamine dimesylate v Methylphenidate
Number of subjects included in analysis	356

End point title	Number of Subjects With Treatment-emergent Adverse Events (TEAEs) and Serious TEAEs
-----------------	---

End point description:

An adverse event (AE) was defined as any untoward medical occurrence in a clinical investigation subject administered as a pharmaceutical product that did not necessarily have a causal relationship with this treatment. A serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. TEAEs were events between first dose of double-blind investigational product and up to 3 days after last dose that were absent before treatment or that worsened relative to pretreatment state.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 March 2012	Revision of Inclusion Criterion at the request of the Institutional Review Board to indicate that blood pressure measurements should not exceed the 90th percentile.
26 August 2012	<ol style="list-style-type: none">1. Increased number of sites from 55 to approximately 65 to support study recruitment2. Replaced World Health Organization body mass index (BMI) values with Centers for Disease Control and Prevention (CDC) BMI values3. Revision of reporting instructions for the treatment assignment to be unblinded as soon as possible after the investigator was unblinded4. Changed the start of the screening and washout phase from 7-28 days to 3-28 days prior to the baseline visit (Visit 0) to address day of enrolment for subjects who did not require a medication washout5. Clarification that the washout telephone call was applicable to all subjects. Modified washout telephone call procedures6. Modification that subjects accepted to participate in the pharmacogenomic substudy signed the pharmacogenomic informed consent and assent7. Revision to include provision for additional care of subjects after the study.
04 January 2013	<ol style="list-style-type: none">1. Addition of Europe and Canada to support study recruitment2. Addition of text indicating randomization would be stratified by geographic region3. Revision of text regarding Shire's serious adverse event (SAE) reporting information4. Clarification that timeframe for reporting SAEs was 24 hours (rather than 1 business day) to comply with Medicines and Healthcare Products Regulatory Agency (United Kingdom)5. Addition of Inclusion Criterion to allow subjects not completely satisfied with aspects of their current ADHD therapy to participate in the study6. Removal of Exclusion Criterion that disqualified subjects who were well-controlled on their current ADHD medication with acceptable tolerability7. Increased the number of sites from 65 to approximately 80 to account for the addition of Europe and Canada8. Inclusion of updated information regarding the definition, period of observation, and recording of AEs9. Addition of text to indicate that a change in a vital sign or ECG value could represent an AE if clinically relevant10. Specification of information related to inpatient hospitalization or prolongation of existing hospitalization for SAEs.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
