Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 July 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 July 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to determine whether dexamethasone plus MLN9708 improves hematologic response and 2-year vital organ (that is, heart or kidney) deterioration and mortality rate versus a physician's choice of a chemotherapy regimen.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	United States: 42
Country: Number of subjects enrolled	Czechia: 3
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Germany: 16
Country: Number of subjects enrolled	United Kingdom: 17
Country: Number of subjects enrolled	Greece: 15
Country: Number of subjects enrolled	Italy: 7

Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Turkey: 1
Country: Number of subjects enrolled	Australia: 14
Country: Number of subjects enrolled	Brazil: 1
Country: Number of subjects enrolled	China: 6
Country: Number of subjects enrolled	Israel: 8
Country: Number of subjects enrolled	Japan: 7
Country: Number of subjects enrolled	Korea, Republic of: 14
Worldwide total number of subjects	177
EEA total number of subjects	59

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	84
From 65 to 84 years	93
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 66 investigative sites from 12 December 2012 to 11 July 2022. The study was prematurely terminated as it failed to meet the first primary endpoint at the first interim analysis.

Pre-assignment

Screening details:

Participants with a diagnosis of relapsed or refractory (R/R) systemic light chain amyloidosis (AL) were enrolled in the study to receive ixazomib capsules or physician's choice of therapy, which included dexamethasone tablets alone or in combination with either melphalan, cyclophosphamide, thalidomide or lenalidomide.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A: Ixazomib + Dexamethasone

Arm description:

Participants received ixazomib 4 mg, capsules, orally, once on Days 1, 8, and 15 and dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle for up to a maximum of 95.2 months. Dexamethasone was increased up to 40 mg/day after 4 weeks, if tolerated.

Arm type	Experimental
Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Dexamethasone tablets

Investigational medicinal product name	Ixazomib
Investigational medicinal product code	
Other name	MLN9708
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ixazomib capsules

Arm title	Arm B: Dexamethasone + Melphalan
------------------	----------------------------------

Arm description:

Participants received dexamethasone 20 mg, orally, and melphalan 0.22 mg/kg, orally once on Days 1 through 4 of each 28-day cycle, for up to a maximum of 72.4 months.

Arm type	Active comparator
Investigational medicinal product name	Melphalan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:	
Melphalan tablets	
Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Dexamethasone tablets	
Arm title	Arm B: Dexamethasone + Cyclophosphamide
Arm description:	
Participants received dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22, and cyclophosphamide 500 mg, orally, on Days 1, 8, and 15 of each 28-day cycle for up to a maximum of 72.4 months.	
Arm type	Active comparator
Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Cyclophosphamide tablets	
Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Dexamethasone tablets	
Arm title	Arm B: Dexamethasone + Thalidomide
Arm description:	
Participants received dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle, and thalidomide daily at a starting dose of 50 mg and increased, as tolerated, to a maximum of 200 mg, orally for up to a maximum of 72.4 months.	
Arm type	Active comparator
Investigational medicinal product name	Thalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Thalidomide capsules	
Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Dexamethasone tablets	
Arm title	Arm B: Dexamethasone + Lenalidomide
Arm description:	
Participants received dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-	

day cycle and lenalidomide 15 mg, orally, once on Days 1 through 21 every 28 days for up to a maximum of 72.4 months.

Arm type	Active comparator
Investigational medicinal product name	Lenalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Lenalidomide capsules

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Dexamethasone tablets

Reporting group description: Participants received dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle and lenalidomide 15 mg, orally, once on Days 1 through 21 every 28 days for up to a maximum of 72.4 months.	
Subject analysis set title	ArmB:Dex + Melphalan/Cyclophosphamide/Thalidomide/Lenalidomide
Subject analysis set type	Full analysis
Subject analysis set description: Participants received dexamethasone 20 mg, orally, and melphalan 0.22 mg/kg, orally once on Days 1 through 4 of each 28-day cycle, for up to a maximum of 72.4 months OR dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22, and cyclophosphamide 500 mg, orally, on Days 1, 8, and 15 of each 28-day cycle for up to a maximum of 72.4 months OR dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle, and thalidomide daily at a starting dose of 50 mg and increased, as tolerated, to a maximum of 200 mg, orally for up to a maximum of 72.4 months OR dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle and lenalidomide 15 mg, orally, once on Days 1 through 21 every 28 days for up to a maximum of 72.4 months.	

Primary: Percentage of Participants With Overall Hematologic Response

End point title	Percentage of Participants With Overall Hematologic Response
End point description: Overall hematologic response was defined as the percentage of participants with complete response (CR), very good partial response (VGPR) and partial response (PR) based on central laboratory results and the 2010 International Society of Amyloidosis (ISA) Consensus Criteria as assessed by an adjudication committee. CR: Complete disappearance of M-protein from serum and urine on immunofixation, and normalisation of free light chain (FLC) ratio. VGPR: differential free light chain (difference between involved and uninvolved FLC levels; dFLC) < 40 mg/L. PR: ≥50% reduction in dFLC. Percentages were rounded off to the nearest decimal. ITT Population included all participants who were randomised. Number of subjects analysed is the number of participants with data available for analyses.	
End point type	Primary
End point timeframe: From first dose of study drug until discontinuation of study drug due to disease progression or unacceptable toxicity, or death whichever occurs first (up to 115 months)	

End point values	Arm A: Ixazomib + Dexamethasone	Arm B: Dexamethasone + Melphalan	Arm B: Dexamethasone + Cyclophosphamide	Arm B: Dexamethasone + Thalidomide
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group

number (confidence interval 95%)	53 (41.8 to 63.9)	58 (36.6 to 77.9)	30 (6.7 to 65.2)	50 (1.3 to 98.7)

End point values	Arm B: Dexamethasone + Lenalidomide			
Subject group type	Reporting group			
Number of subjects analysed	47			
Units: percentage of participants				
number (confidence interval 95%)	51 (36.1 to 65.9)			

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description:	
Statistical analysis was planned to be collected and analyzed in a combined manner for the non-ixazomib arm groups versus ixazomib group in this outcome measure.	
Comparison groups	Arm A: Ixazomib + Dexamethasone v Arm B: Dexamethasone + Melphalan v Arm B: Dexamethasone + Thalidomide v Arm B: Dexamethasone + Cyclophosphamide v Arm B: Dexamethasone + Lenalidomide
Number of subjects included in analysis	168
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.7623 ^[2]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Odds ratio (OR)
Point estimate	1.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.6
upper limit	2.01

Notes:

[1] - Odds ratio was derived from a logistic regression model with treatment and 95% confidence interval (CI) for the odds ratio was based on the Wald approximation.

[2] - P-value was calculated from the unstratified Cochran-Mantel-Haenszel (CMH) test to compare hematologic response rate between the treatment arms.

Primary: 2-Year Vital Organ (Heart or Kidney) Deterioration and Mortality Rate

End point title	2-Year Vital Organ (Heart or Kidney) Deterioration and Mortality Rate ^[3]
-----------------	--

End point description:

Cardiac (Heart) deterioration was defined as the need for hospitalisation for heart failure. Kidney deterioration was defined as progression to end-stage renal disease (ESRD) with the need for maintenance dialysis or renal transplantation. Vital organ deterioration was evaluated by an adjudication committee. Percentages were rounded off to the nearest decimal. As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this outcome measure. ITT Population included all participants who were randomised. Number of subjects analysed is the number of participants with data available for analyses.

End point type	Primary
----------------	---------

End point timeframe:

Up to 2 years

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this endpoint.

End point values	Arm A: Ixazomib + Dexamethasone	ArmB:Dex + Melphalan/Cycl ophosphamide/ Thalidomide/Le nalidomide		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	85	83		
Units: percentage of participants				
number (confidence interval 95%)	47 (36.1 to 58.2)	54 (41.7 to 64.1)		

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Comparison groups	Arm A: Ixazomib + Dexamethasone v ArmB:Dex + Melphalan/Cyclophosphamide/Thalidomide/Lenalidomide
Number of subjects included in analysis	168
Analysis specification	Pre-specified
Analysis type	superiority ^[4]
P-value	= 0.351 ^[5]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Odds ratio (OR)
Point estimate	0.75
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.41
upper limit	1.38

Notes:

[4] - Odds ratio was derived from a logistic regression model with treatment and 95% CI for the odds ratio was based on the Wald approximation.

[5] - P-value was calculated from the unstratified CMH test to make comparisons between the 2 treatment arms.

Secondary: Percentage of Participants With Complete Hematologic Response

End point title	Percentage of Participants With Complete Hematologic Response ^[6]
-----------------	--

End point description:

Complete hematologic response was defined as the percentage of participants with CR based on central laboratory results and the 2010 ISA Consensus Criteria as assessed by the investigator. CR: Complete disappearance of M-protein from serum and urine on immunofixation, and normalisation of FLC ratio. Percentages were rounded off to the nearest decimal. As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this outcome measure. Number of subjects included in analysis	177
Analysis specification	Pre-specified
Analysis type	superiority ^[8]
P-value	= 0.389 ^[9]
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.82
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.52
upper limit	1.29

Notes:

[8] - Unadjusted stratified Cox regression model was used to estimate the hazard ratio and its 95% CIs for the treatment effect using the stratification factors.

[9] - P-value was calculated using log-rank test stratified by the stratification factors.

Secondary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS) ^[10]
End point description:	
PFS was defined as the time from the date of randomisation to the date of first documentation of hematologic disease progression, or organ (cardiac or renal) progression, or death due to any cause, whichever occurred first according to central laboratory results and ISA criteria as evaluated by the investigator. As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this outcome measure. ITT Population included all participants who were randomised.	
End point type	Secondary
End point timeframe:	
From first dose of study drug until discontinuation of study drug due to disease progression or unacceptable toxicity, or death whichever occurs first (up to 115 months)	

Notes:

[10] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this endpoint.

Secondary: Time to Vital Organ (Heart or Kidney) Deterioration and Mortality Rate

End point title	Time to Vital Organ (Heart or Kidney) Deterioration and Mortality Rate ^[18]
-----------------	--

End point description:

Time to vital organ deterioration or death was assessed by the investigator and defined as the time from randomisation to vital organ (heart or kidney) deterioration or death, whichever occurs first. Cardiac deterioration is defined as the need for hospitalisation for heart failure. Kidney deterioration is defined as progression to ESRD with the need for maintenance dialysis or renal transplantation. As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this outcome measure. ITT Population included all participants who were randomised.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomisation to time of vital organ deterioration or death (up to 115 months)

Notes:

[18] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this endpoint.

Notes:

[19] - Unadjusted stratified Cox regression model was used to estimate the hazard ratio and its 95% CIs for the treatment effect using the stratification factors.

[20] - P-value was calculated using log-rank test stratified by the stratification factors.

Secondary: Percentage of Participants With Best Vital Organ (Cardiac and/or Kidney) Response

End point title	Percentage of Participants With Best Vital Organ (Cardiac and/or Kidney) Response ^[21]
-----------------	---

End point description:

Vital organ (heart and kidney) response rate was defined as the percentage of participants who achieved vital organ response according to central laboratory results and ISA criteria as evaluated by an adjudication committee. A vital organ response was defined as response of 1 or 2 of the involved vital organs with no change from Baseline in the rest of involved vital organs. Percentages were rounded off to the nearest decimal. As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this outcome measure. ITT Population included all participants who were randomised. Number of subjects analysed is the number of participants with data available for analyses.

End point type	Secondary
----------------	-----------

End point timeframe:

From first dose of study drug until discontinuation of study drug due to disease progression or unacceptable toxicity, or death whichever occurs first (up to 115 months)

End point title	Change From Baseline in 36-item Short Form General Health Survey (SF-36) General Health Survey Score
-----------------	--

End point description:

SF-36 Version 2 is a multipurpose, participant completed, short-form health survey with 36 questions that consists of an 8-scale profile of functional health and well-being scores as well as psychometrically-based physical and mental health summary measures. Physical component summary (PCS) is mostly contributed by physical function (PF), role physical (RP), bodily pain (BP), and general health (GH). Mental component summary (MCS) is mostly contributed by mental health (MH), role emotional (RE), social function (SF), and vitality (VT). Each component on the SF-36 item health survey is scored from 0 (best) to 100 (worst). As the study failed to meet the first primary endpoint per Sponsor's specification at the first interim analysis, it was decided to terminate the study early without proceeding with the protocol-specified sequence of analyses. Owing to the same, data for this endpoint was not collected.

End point description:

The EQ visual analogue scale (VAS) records the participant's self-rated health on a 20 centimeter vertical VAS that ranges from 0 (worst imaginable health state) to 100 (best imaginable health state). Baseline is defined as the value collected at the time closest to, but prior to, the start of study drug administration. As prespecified in the protocol, data was planned to be collected and analysed in a

combined way for non-ixazomib arm groups in this outcome measure. ITT Population included all participants who were randomised. Number of subjects analysed is the number of participants with data available for analyses. 99999=Standard Deviation (SD) was not estimable for 1 participant.

End point type	Secondary
End point timeframe:	
At Week 28 of the OS follow-up	

Notes:

[52] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: As prespecified in the protocol, data was planned to be collected and analysed in a combined way for non-ixazomib arm groups in this endpoint.

End point values	Arm A: Ixazomib + Dexamethason e	ArmB:Dex + Melphalan/Cycl ophosphamide/ Thalidomide/Le nalidomide		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	0 ^[53]	1		
Units: score on a scale				
arithmetic mean (standard deviation)	()	23.0 (± 99999)		

Notes:

[53] - No participants were available for analysis in this arm.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Medical Encounters Participants Experience

End point title	Number of Medical Encounters Participants Experience
-----------------	--

End point description:

Medical encounters were planned to be recorded as the number of admissions to an inpatient and outpatient setting for any reason (including length of stay, inpatient, outpatient and reason), number of missing days from work or other activities by participant or care-giver. As the study failed to meet the first primary endpoint per Sponsor's specification at the first interim analysis, it was decided to terminate the study early without proceeding with the protocol-specified sequence of analyses. Owing to the same, data for this endpoint was not collected.

End point type	Secondary
----------------	-----------

End point timeframe:

At screening; Cycle 1, Day 1; Cycle 2, Day 1; Cycle 3, Day 1; Day 1 of every 3 cycles until disease progression (up to 115 months) [cycle length=28 days]

End point values	Arm A: Ixazomib + Dexamethason e	Arm B: Dexamethason e + Melphalan	Arm B: Dexamethason e + Cyclophospha mide	Arm B: Dexamethason e + Thalidomide
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	0 ^[54]	0 ^[55]	0 ^[56]	0 ^[57]
Units: participants				

Notes:

[54] - The data for this outcome measure was not collected due to study termination.

[55] - The data for this outcome measure was not collected due to study termination.

[56] - The data for this outcome measure was not collected due to study termination.

[57] - The data for this outcome measure was not collected due to study termination.

End point values	Arm B: Dexamethason e + Lenalidomide			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[58]			
Units: participants				

Notes:

[58] - The data for this outcome measure was not collected due to study termination.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug through 30 days after administration of the last dose of study drug (up to 115 months)

Adverse event reporting additional description:

All-cause mortality: ITT Population included all participants who were randomized. Serious and other adverse events: Safety Population included all participants who received at least 1 dose of any treatment drug.

Assessment type	Systematic

Reporting groups

Reporting group title	Arm A: Ixazomib + Dexamethasone
-----------------------	---------------------------------

Reporting group description:

Participants received ixazomib 4 mg, capsules, orally, once on Days 1, 8, and 15 and dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle for up to a maximum of 95.2 months. Dexamethasone was increased up to 40 mg/day after 4 weeks, if tolerated.

Reporting group title	Arm B: Dexamethasone + Cyclophosphamide
-----------------------	---

Reporting group description:

Participants received dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22, and cyclophosphamide 500 mg, orally, on Days 1, 8, and 15 of each 28-day cycle for up to a maximum of 72.4 months.

Reporting group title	Arm B: Dexamethasone + Lenalidomide
-----------------------	-------------------------------------

Reporting group description:

Participants received dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle and lenalidomide 15 mg, orally, once on Days 1 through 21 every 28 days for up to a maximum of 72.4 months.

Reporting group title	Arm B: Dexamethasone + Melphalan
-----------------------	----------------------------------

Reporting group description:

Participants received dexamethasone 20 mg, orally, and melphalan 0.22 mg/kg, orally once on Days 1 through 4 of each 28-day cycle, for up to a maximum of 72.4 months.

Reporting group title	Arm B: Dexamethasone + Thalidomide
-----------------------	------------------------------------

Reporting group description:

Participants received dexamethasone 20 mg, orally, once weekly on Days 1, 8, 15, and 22 of each 28-day cycle, and thalidomide daily at a starting dose of 50 mg and increased, as tolerated, to a maximum of 200 mg, orally for up to a maximum of 72.4 months.

Serious adverse events	Arm A: Ixazomib + Dexamethasone	Arm B: Dexamethasone + Cyclophosphamide	Arm B: Dexamethasone + Lenalidomide

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 January 2020	Following updates were made as per Amendment 6: -Added primary study results from the first interim analysis (IA)-Defined the ongoing safety assessments. - Discontinued all disease and efficacy response assessments, including central laboratory assessments of efficacy and safety, for protocol purposes. - Discontinued pharmacokinetic (PK) sampling, health utilisation assessments and collection of concomitant medications and procedures for ongoing participants. - Specified that no further adjudication committee (AC) reviews were needed. - Updated the number of participants in the study and the estimated study duration. -Discontinued the PFS and OS follow-up periods. -Defined overdose. - Removed mention of the Safety Management Attachment (SMA). -Updated the procedures for SAE reporting. -Specified that no further independent data monitoring committee reviews of safety and efficacy were needed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
11 July 2022	The study was terminated based on Sponsor's decision as it failed to meet the first primary endpoint at the first interim analysis.	-

Notes:

Limitations and caveats

None reported
