Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 November 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 December 2014
Global end of trial reached?	Yes
Global end of trial date	31 December 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To explore whether chronic Efavirenz therapy is associated with mild cognitive impairment, and if it is improved by switch to Kaletra after 10 weeks.

Protection of trial subjects:

There were no specific measures put in place by the DMC to protect trial subjects.

On the 4th of Oct 2013 the chief investigator updated the DMC committee with a protocol deviation where the lipid profile and glucose blood tests were stipulated in the current protocol to be performed routinely in clinic within 12 weeks of the screening visit, however as part of routine care lipid profile and glucose blood tests were only checked every 12 months. Ashley informed the DMC that the issue was discussed with Sponsor and the TSC and both had agreed to an amendment to the protocol to allow lipid profile and glucose blood results for screening visit as long as it was completed as per clinical guidelines within the previous 12 months.

The Kaletra SmPC was also updated in this amendment.

The serious breach was discussed with the DMC on the 28th of November 2014 and there was no further comments.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 16
Worldwide total number of subjects	16
EEA total number of subjects	16

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A pilot phase IV open-label controlled trial in HIV-infected patients who had been on suppressive Efavirenz (EFV)-based Highly Active Anti-retroviral Therapy (HAART) for at least 6 months were observed at baseline + 10 weeks after a switch from EFV to Kaletra® (co-formulated lopinavir/ritonavir). To examine the effect of EFV on cognitive function.

Pre-assignment

Screening details:

Patients with illicit drug use or excessive alcohol use were excluded. Patients were also unselected with respect to the presence or absence of cognitive symptoms.

Pre-assignment period milestones

Number of subjects started	16
Number of subjects completed	16

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Switch from EFV to Kaletra® for 10 weeks
-----------	--

Arm description:

Single arm

Arm type	Experimental
Investigational medicinal product name	Kaletra®
Investigational medicinal product code	21-903
Other name	co-formulated lopinavir/ritonavir
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

400/100mg (2 tablets) every twelve hours. Kaletra was dispensed at study visit immediately prior to treatment switch. Participants were given clear instructions at this time on which date to stop EFV and start Kaletra. This date was no more than 2 weeks following the date of dispensing.

Number of subjects in period 1	Switch from EFV to Kaletra® for 10 weeks
Started	16
Completed	16

Secondary: Cerebral metabolite profile (magnetic resonance spectroscopy) – Grey matter – Choline to Creatine ratio (Cho/Cre)

End point title	Cerebral metabolite profile (magnetic resonance spectroscopy) – Grey matter – Choline to Creatine ratio (Cho/Cre)
-----------------	---

End point description:

MRS data will measure cerebral metabolites, each of which will be expressed as a ratio to creatine (Cre) to increase inter-scan standardisation.

Cho (choline) is a measure of cell turnover and inflammation. It has been reported to be increased in

HIV-associated cognitive impairment, and often is increased where NAA is decreased. Single voxel measurement gives the lowest coefficient of variance (CoV) on the measure and hence can detect smallest changes. Raw MRS data will first be registered against a standard model from which the metabolite concentrations will be derived. Change is defined so that an increase from Visit 1 to Visit 3 is positive.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline visit (week 1) – each participant had MRI scan to obtain baseline Cerebral metabolite profile (magnetic resonance spectroscopy) and functional Magnetic resonance imaging (fMRI) results.

Visit 3 (week 13) – each participant again had MRI scan to

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The pdf created by EudracT gives unrepresentative information when numbers exposed under the general disorders is displayed.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 August 2012	<p>The MHRA issued a Notice of Ground of Non-acceptance and Right to Amend Request letter dated 20th July 2012.</p> <p>The following medical points were raised, and were addressed in our response letter to MHRA dated 31st July 2012. Notice of Acceptance of Amended Request for a Clinical Trial Authorisation was granted on 06 August 2012. We have listed our responses, point by point below</p> <p>Point 1 - The Sponsor is required to enter the prohibited medications and medication not recommended to be co-administrated with efavirenz or Kaletra, as per respective SmPCs, in the exclusion criteria and in the list of prohibited medications during the trial.</p> <p>We have made changes to Section 10.2 Exclusion criteria and Section 12.3 Concomitant medication of the protocol as requested.</p> <p>Point 2 - The Sponsor is required to add breastfeeding to the exclusion criteria, in accordance with the SmPCs of efavirenz and lopinavir.</p> <p>We have added this information to the protocol as requested.</p> <p>Point 3 - the Sponsor is required to follow the SmPC of efavirenz and define the contraceptive methods and duration for both genders.</p> <p>We have made changes to Section 19.5 of the protocol as requested and agreed by Dr Steinberg MHRA. In addition to this we have changed the sub heading to 'Pregnancy and fertility' to further clarify this point</p> <p>Point 4 - The Sponsor is required to discontinue Kaletra if a diagnosis of pancreatitis is made during the trial.</p> <p>We have added this information to Section 17.2 Withdrawal of participants of the protocol as requested.</p> <p>Point 5 - The Sponsor must specify that patients who become pregnant during the trial whilst taking efavirenz must discontinue the efavirenz.</p> <p>We have made changes to Section 19.5 Pregnancy and fertility of the protocol as requested and agreed by Dr Steinberg MHRA. These changes are consistent with the BHIVA 2012 Guidelines for the management of HIV infection in pregnant women. In addition to this, we have added further information regarding pat</p>

24 October 2013	<p>A listed summary of changes is as follows:</p> <p>1) Change to the protocol section 10.1 Inclusion criteria to delete the first paragraph as it is repeated with the second paragraph.</p> <p>2) Changes to the protocol section 10.2 Exclusion criteria and 12.3 Concomitant medication to add Rivaroxaban to reflect the Kaletra SmPC update on 19 September 2012.</p> <p>3) Additional paragraph is added to the protocol section 11.1 Identification and screening of participants to allow the study adding additional Participant Identification Centres (PICs) if the recruitment rate is low.</p> <p>4) Change to the protocol section 15.1 schedule of events and second paragraph of Explanatory notes on table of events (page 30), screening visit, glucose and lipids blood results time limit to 12 months instead of 12 weeks from the screening visit. This is to bring it in line with the current clinical practice and British HIV Association Guidelines "Routine investigation and monitoring of adult HIV-1-infected individuals (2011). Section: 18.4.1 Recommendations for assessment and monitoring of lipid profile". Please see attached a copy of the BHIV guidelines for your information.</p> <p>5) Additional paragraph is added to the protocol section 19.2 Expected adverse reactions to cover the commonest anticipated adverse drug reaction – diarrhoea and suggest routine clinical treatment (Loperamide 2mg as needed).</p> <p>6) Change to the protocol appendix 1 Summary of Product Characteristics for Kaletra as Kaletra SmPC has been updated on 21 May 2013 on electronic Medicines Compendium (eMC) website. (Kaletra SmPC had been updated three times since the study was granted the REC favourable opinion and MHRA Clinical Trial Authorisation. SmPC dated 21 May 2013 is the most updated version.)</p> <p>7) Change to the protocol appendix 6 Study poster as a result of feedback from the lay representative for the study.</p> <p>8) The protocol has been updated to reflect the Marketing Authorisation transfer approval from Abbott Labora</p>
-----------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

17 were recruited, 16 were eligible. Due to an error 1 patient received monotherapy for 4 weeks but was well on follow up. Viral load was not affected. A Serious breach was reported to the MHRA+REC, sponsor identified no other patients were affected.

Notes:
