Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 September 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 August 2014
Global end of trial reached?	Yes
Global end of trial date	21 July 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the noninferiority of ceftazidime-avibactam (CAZ-AVI, formerly CAZ104) compared with doripenem with respect to the following FDA coprimary endpoints and EU primary endpoint in the microbiological modified intent-to-treat (mMITT) analysis set:

FDA Primary Objective (Coprimary Endpoints):

Symptomatic resolution (or return to premorbid state) of UTI-specific symptoms except flank pain (frequency/urgency/dysuria/suprapubic pain) and resolution of, or improvement in, flank pain based on the patient-reported symptom assessment response at the Day 5 visit.

Both per-patient favourable microbiological response and symptomatic resolution (or return to premorbid state) of all UTI-specific symptoms (frequency/urgency/dysuria/suprapubic pain/flank pain) based on the patient-reported symptom assessment response at the Test of Cure (TOC) visit.

EU Primary Objective:

Per patient favourable microbiological response at the TOC visit.

Protection of trial subjects:

The study will be performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and are consistent with the International Conference on Harmonisation (ICH) harmonised tripartite guideline E6(R1): Good Clinical Practice, applicable regulatory requirements and the AstraZeneca policy on Bioethics and Human Biological Samples.'

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 October 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Worldwide total number of subjects	1033
EEA total number of subjects	409

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	710
From 65 to 84 years	313
85 years and over	10

Subject disposition

Recruitment

Recruitment details:

A total of 1033 patients were randomized in 133 centers in 25 countries. The first patient was randomized on 10OCT2012 and the last patient was randomized on 30JUN2014. A total of 5 patients in the CAZ-AVI arm and 8 patients in Doripenem arm were randomized but did not receive study drug.

Pre-assignment

Screening details:

None

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	CAZ-AVI

Arm description:

Ceftazidime-avibactam treatment group

Arm type	Experimental
Investigational medicinal product name	Ceftazidime-avibactam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Sterile crystalline powder, 2000 mg ceftazidime and 500 mg avibactam

Arm title	Doripenem
------------------	-----------

Arm description:

Doripenem treatment group

Arm type	Active comparator
Investigational medicinal product name	Doripenem
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Sterile powder, 500 mg

Number of subjects in period 1	CAZ-AVI	Doripenem

Analysis specification	Pre-specified
Analysis type	
P-value	= 0.155
Method	Logrank

Secondary: Per-pathogen microbiological response at EOT (IV) for baseline pathogen (mMITT analysis set)

End point title	Per-pathogen microbiological response at EOT (IV) for baseline pathogen (mMITT analysis set)
-----------------	--

End point description:

Number of favorable per-pathogen microbiological responses at the EOT (IV) visit in the mMITT analysis set

End point type	Secondary
----------------	-----------

End point timeframe:

At EOT IV visit. EOT (IV) visit is Within 24 hours after completion of the last infusion of IV study therapy and on/before the first dose for oral study therapy

End point values	CAZ-AVI	Doripenem		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	393	417		
Units: Participant				
Escherichia coli - Favorable (n=292, 306)	280	293		
Klebsiella pneumoniae - Favorable (n=44, 56)	41	51		
Proteus mirabilis - Favorable (n=17, 13)	16	11		
Enterobacter cloacae - Favorable (n=11,13)	9	13		
Pseudomonas aeruginosa - Favorable (n=18, 20)	17	18		

Statistical analyses

No statistical analyses for this end point

Secondary: Per-pathogen microbiological response at TOC for baseline pathogen (mMITT analysis set)

End point title	Per-pathogen microbiological response at TOC for baseline pathogen (mMITT analysis set)
-----------------	---

End point description:

Number of favorable per-pathogen microbiological responses at the TOC visit in the mMITT analysis set

End point type	Secondary
----------------	-----------

End point timeframe:

At TOC visit. TOC visit is 21 to 25 days from Randomization

End point values	CAZ-AVI	Doripenem

Statistical analyses

No statistical analyses for this end point

Secondary: Plasma concentrations for ceftazidime within 15 minutes before/after dose (PK analysis set)

End point title	Plasma concentrations for ceftazidime within 15 minutes before/after dose (PK analysis set) ^[1]
End point description:	Blood samples were taken on Day 3 for ceftazidime (CAZ) and avibactam (AVI) plasma concentration.
End point type	Secondary
End point timeframe:	within 15 minutes before/after dose

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The marketed treatment 'Doripenem' has been selected as the comparator in this protocol. However, the PK profile has already been established for the marketed treatment 'Doripenem'. Therefore, the PK analysis is only performed on the investigational product 'CAZ-AVI' in this protocol.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 August 2013	Combined the 2 protocols (D4280C00002 and D4280C00004) into a single study database
09 August 2013	All data analyses based on data from the combined studies (D4280C00002 and D4280C00004)

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
