

## Clinical trial results:

**A phase II, randomized, controlled, partially-blind study to demonstrate immunogenicity and assess safety of GlaxoSmithKline (GSK) Biologicals' pneumococcal vaccines (2830929A and 2830930A) administered as a 3-dose primary vaccination course during the first 6 months of life and as a booster dose at 12-15 months of age.**

### Summary

EudraCT number	2011-005743-27
Trial protocol	CZ ES DE PL
Global end of trial date	22 January 2014

### Results information

Result version number	v2
This version publication date	02 July 2016
First version publication date	27 May 2015
Version creation reason	<ul style="list-style-type: none"><li>• New data added to full data set</li></ul> Data for primary/secondary endpoints have been added.

### Trial information

#### Trial identification

Sponsor protocol code	116485
-----------------------	--------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01616459
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 May 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 January 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate that 2830929A vaccine co-administered with DTPa-HBV-IPV/Hib as a three-dose primary vaccination course at approximately 2, 3, 4 months of age is non-inferior to Prevnar 13 or Synflorix in terms of percentage of subjects with antibody concentrations greater or equal to the seropositivity threshold and in terms of ELISA Geometric Mean Concentrations (GMCs).

To demonstrate that 2830930A vaccine co-administered with DTPa-HBV-IPV/Hib at approximately 2, 3, 4 months of age is non-inferior to Prevnar 13 or Synflorix in terms of percentage of subjects with antibody concentrations greater or equal to the seropositivity threshold and in terms of ELISA GMCs.

Protection of trial subjects:

All subjects were supervised for 30 min after vaccination with appropriate medical treatment readily available. Vaccines were administered by qualified and trained personnel. Only eligible subjects that had no contraindications to any components of the vaccines were vaccinated. Subjects were followed-up for 30 days after each/last vaccination.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 July 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 150
Country: Number of subjects enrolled	Spain: 398
Country: Number of subjects enrolled	Czech Republic: 253
Country: Number of subjects enrolled	Germany: 152
Worldwide total number of subjects	953
EEA total number of subjects	953

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	953
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

953 subjects were enrolled in the study, among whom 951 received at least one dose of study vaccine, while 2 were allocated a subject number but did not receive any study vaccine dose.

### Pre-assignment

Screening details:

Study vaccines were administered as a 3-dose primary vaccination in healthy infants between 6-12 weeks (42-90 days) of age at the time of the first vaccination (Primary Phase), and then as an additional booster dose when subjects reached 12-15 months of age (Booster Phase).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	11Pn Group

Arm description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of GSK2830929A, or 11Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 11Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 11Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Arm type	Experimental
Investigational medicinal product name	Pneumococcal conjugate vaccine GSK2830929A
Investigational medicinal product code	
Other name	11Pn
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a 3-dose primary vaccination course of GSK2830929A, or 11Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 11Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 11Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	
Other name	DTPA-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received a 3-dose primary vaccination course of GSK2830929A, or 11Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 11Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered

intramuscularly into the left anterolateral thigh. The booster dose of 11Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

<b>Arm title</b>	12Pn Group
------------------	------------

**Arm description:**

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of GSK2830930A, or 12Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 12Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 12Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Arm type	Experimental
Investigational medicinal product name	Pneumococcal conjugate vaccine GSK2830930A
Investigational medicinal product code	
Other name	12Pn
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received a 3-dose primary vaccination course of GSK2830930A, or 12Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 12Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 12Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	
Other name	DTPA-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received a 3-dose primary vaccination course of GSK2830930A, or 12Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 12Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 12Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

<b>Arm title</b>	Synflorix Group
------------------	-----------------

**Arm description:**

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of Synflorix™ at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Synflorix™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Synflorix™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Synflorix™
Investigational medicinal product code	
Other name	10Pn
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received a 3-dose primary vaccination course of Synflorix™ at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Synflorix™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Synflorix™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	
Other name	DTPA-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received a 3-dose primary vaccination course of Synflorix™ at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Synflorix™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Synflorix™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

<b>Arm title</b>	Prevnam13 Group
------------------	-----------------

**Arm description:**

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of Prevnam13™ vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Prevnam13™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Prevnam13™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Arm type	Active comparator
Investigational medicinal product name	Prevnam 13™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received a 3-dose primary vaccination course of Prevnam13™ vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Prevnam13™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Prevnam13™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	
Other name	DTPA-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects received a 3-dose primary vaccination course of Prevnam13™ vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-

administered with one dose of Infanrix hexa™. The first 3 doses of Prevnar13™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Prevnar13™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Although 953 subjects were enrolled, only 951 subjects started the study and were vaccinated.

## Baseline characteristics

### Reporting groups

Reporting group title	11Pn Group
-----------------------	------------

#### Reporting group description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of GSK2830929A, or 11Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 11Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 11Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Reporting group title	12Pn Group
-----------------------	------------

#### Reporting group description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of GSK2830930A, or 12Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 12Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 12Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Reporting group title	Synflorix Group
-----------------------	-----------------

#### Reporting group description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of Synflorix™ at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Synflorix™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Synflorix™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Reporting group title	12Pn Group
Reporting group description:	
Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of GSK2830930A, or 12Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 12Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 12Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).	
Reporting group title	Synflorix Group
Reporting group description:	
Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of Synflorix™ at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Synflorix™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Synflorix™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).	
Reporting group title	Pprevnar13 Group
Reporting group description:	
Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of Pprevnar13™ vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Pprevnar13™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Pprevnar13™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).	

### Primary: Antibody concentrations against pneumococcal serotypes during the Primary Phase of the study

End point title	Antibody concentrations against pneumococcal serotypes during the Primary Phase of the study <sup>[1]</sup>
End point description:	
Antibodies assessed for this outcome measure were those against the vaccine/cross-reactive pneumococcal serotypes 1, 3, 4, 5, 6A, 6B, 7F, 9V, 14, 18C, 19A, 19F and 23F (ANTI-1, -3, -4, -5, -6A, -6B, -7F, -9V, -14, -18C, -19A, -19F and -23F). Antibody concentrations were measured by 22F-Inhibition enzyme-linked immunosorbent assay (ELISA), expressed as geometric mean concentrations (GMCs), in micrograms per milliliter (µg/mL). The cut-off of the assay was an antibody concentration higher than or equal to ( $\geq$ ) 0.05 µg/mL. Primary outcome results correspond to antibody concentrations for all serotypes presented at the exception of those for the antibodies against the cross-reactive	

pneumococcal serotype 3 (ANTI-3). Analysis of concentrations of antibodies against the cross-reactive pneumococcal serotype 6C (ANTI-6C) was not performed due to unavailability of a specific qualified assay.

End point type	Primary
End point timeframe:	
At study Month 3, e. g. at one month post-Dose 3 of pneumococcal vaccine	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The scope of this primary end point was descriptive, no statistical hypothesis test was performed.

## Statistical analyses

No statistical analyses for this end point

## Primary: Percentage (%) of subjects (Synflorix and 11Pn groups) with antibody concentration $\geq 0.2$ µg/mL for pneumococcal serotypes

End point title	Percentage (%) of subjects (Synflorix and 11Pn groups) with antibody concentration $\geq 0.2$ µg/mL for pneumococcal serotypes <sup>[2]</sup>
-----------------	---

End point description:

N = number of subjects with post primary vaccination results available

% = percentage of subjects with ELISA pneumococcal antibody concentrations  $\geq 0.2 \mu\text{g/mL}$

Antibodies assessed for this outcome measure were those against the vaccine pneumococcal serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F (ANTI-1, -4, -5, -6B, -7F, -9V, -14, -18C, -19F and -23F).

Antibody concentrations were measured by 22F-Inhibition enzyme-linked immunosorbent assay (ELISA).

End point type	Primary
----------------	---------

End point timeframe:

1 month post-dose 3 (primary phase)

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is related to the analysis of the difference in terms of percentage of subjects between the 2 following groups: 11Pn group and Synflorix group.

End point values	11Pn Group	Synflorix Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	223	210		
Units: percent				
number (not applicable)				
ANTI-1 (N=222,210)	99.5	98.6		
ANTI-4 (N=222,210)	97.7	96.7		
ANTI-5 (N=222,209)	100	99.5		
ANTI-6B (N=222,210)	77.5	75.2		
ANTI-7F (N=223,210)	99.6	99.5		
ANTI-9V (N=222,210)	98.6	99		
ANTI-14 (N=222,210)	99.5	100		
ANTI-18C (N=222,210)	99.1	98.1		
ANTI-19F (N=223,210)	100	97.6		
ANTI-23F (N=222,210)	81.1	83.8		

## Statistical analyses

Statistical analysis title	(Synflorix - 11Pn) % subjects with ANTI-1 $\geq 0.2\mu\text{g/mL}$
----------------------------	--

Statistical analysis description:

To demonstrate that 11Pn co-administered with Infanrix hexa™ vaccine 1 month post-dose 3 was non-inferior for at least 9 out of 11 serotypes to Prevnar13 vaccine (for 19A) or Synflorix™ vaccine (for 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F) in terms of % of subjects with antibody concentrations  $\geq 0.2 \mu\text{g/mL}$ .

Criteria: UL of the 2-sided 95.9% CI of the difference between (Prevnar13 minus 11Pn) and (Synflorix minus 11Pn) groups  $<10\%$  for at least 9 out of 11 vaccine pneumococcal serotypes.

Comparison groups	11Pn Group v Synflorix Group
Number of subjects included in analysis	433
Analysis specification	Pre-specified

### Primary: Adjusted Geometric Mean Concentrations (GMC) (Synflorix and 12Pn Groups) for pneumococcal serotypes

End point title	Adjusted Geometric Mean Concentrations (GMC) (Synflorix and 12Pn Groups) for pneumococcal serotypes <sup>[39]</sup>
End point description:	
Adjusted GMC = geometric mean antibody concentration adjusted for baseline concentration	
N = number of subjects with both pre- and post-vaccination results available	
Antibodies assessed for this outcome measure were those against the vaccine pneumococcal serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F (ANTI-1, -4, -5, -6B, -7F, -9V, -14, -18C, -19F and -23F).	
Antibody concentrations were measured by 22F-Inhibition enzyme-linked immunosorbent assay (ELISA).	
End point type	Primary
End point timeframe:	
1 month post-dose 3 (primary phase)	

## Notes:

[39] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is related to the analysis of the GMCs ratio between the 2 following groups: 12Pn group and Synflorix group.

End point values	12Pn Group	Synflorix Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	211	203		
Units: µg/mL				
number (not applicable)				
ANTI-1 (N=207,203)	1.58	1.35		
ANTI-4 (N=208,203)	1.94	1.66		
ANTI-5 (N=208,201)	2.37	2.16		
ANTI-6B (N=208,200)	0.56	0.47		
ANTI-7F (N=211,202)	2.42	2.17		
ANTI-9V (N=208,200)	1.78	1.4		
ANTI-14 (N=209,201)	4.48	4.1		
ANTI-18C (N=209,201)	2.55	2.57		
ANTI-19F (N=211,202)	3.29	3.67		
ANTI-23F (N=208,199)	0.68	0.71		

## Statistical analyses

Statistical analysis title	(Synflorix/12Pn) GMCs ratio for ANTI-1 serotype
Statistical analysis description:	
To demonstrate that 12Pn co-administered with Infanrix hexa™ vaccine 1 month post-dose 3 was non-inferior for at least 10 out of 12 vaccine serotypes to Prevnar13 vaccine (for 6A & 19A) or Synflorix™ vaccine (for 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F) in terms of Enzyme-linked immunosorbent assay (ELISA) GMCs.	
Criteria: UL of the 2-sided 95.8% CI of the ELISA GMC ratios (Prevnar13/12Pn) and (Synflorix/12Pn) groups < a limit of 2-fold for at least 10 out of 12 vaccine pneumococcal serotypes.	
Comparison groups	12Pn Group v Synflorix Group
Number of subjects included in analysis	414
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[40]</sup>
Parameter estimate	Adjusted GMCs ratio
Point estimate	0.86
Confidence interval	
level	95.8 %
sides	2-sided
lower limit	0.72
upper limit	1.02

Notes:

[40] - Objectives for 12-valent formulation were to be assessed sequentially after demonstration of objectives for 11-valent formulation.

2-sided 95.8% Confidence Interval (CI) adjusted 1-sided alpha = 2.08%) around the ELISA GMCs ratio between groups.

GMCs ratio and CI were obtained using ANCOVA model on the logarithm-transformed concentrations/titres, including the vaccine group as fixed effect and the pre-vaccination concentration as regressor.

Statistical analysis title	(Synflorix/12Pn) GMCs ratio for ANTI-4 serotype
Statistical analysis description:

sides	2-sided
lower limit	7.22
upper limit	16.49

Notes:

[51] - Objectives for 12-valent formulation were to be assessed sequentially after demonstration of objectives for 11-valent formulation.

2-sided 95.8% Confidence Interval (CI) adjusted 1-sided alpha = 2.08%) of the difference between groups in terms of % of subjects.

Confidence Interval (CI) for difference in proportion: Proc StatXact was used to derive the standardized asymptotic CI for the group difference in proportions [Newcombe, 1998]. The standardized asymptotic method used is method 6.

<b>Statistical analysis title</b>	(Pevnar13-12Pn) % subjects with ANTI-19A $\geq 0.2\mu\text{g/mL}$
-----------------------------------	---

Statistical analysis description:

To demonstrate that 12Pn co-administered with Infanrix hexa™ vaccine 1 month post-dose 3 was non-inferior for at least 10 out of 12 serotypes to Pevnar13 vaccine (for 6A and 19A) or Synflorix™ vaccine (for 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F) in terms of % of subjects with antibody concentrations  $\geq 0.2 \mu\text{g/mL}$ .

Criteria: UL of the 2-sided 95.8%CI of the difference between (Pevnar13 minus 12Pn) and (Synflorix minus 12Pn) groups  $<10\%$  for at least 10 out of 12 vaccine pneumococcal serotypes.

Comparison groups	12Pn Group v Pevnar13 Group
Number of subjects included in analysis	433
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[52]</sup>
Parameter estimate	Difference in percentage
Point estimate	3.75
Confidence interval	
level	95.8 %
sides	2-sided
lower limit	1.03
upper limit	7.57

Notes:

[52] - Objectives for 12-valent formulation were to be assessed sequentially after demonstration of objectives for 11-valent formulation.

2-sided 95.8% Confidence Interval (CI) adjusted 1-sided alpha = 2.08%) of the difference between groups in terms of % of subjects.

Confidence Interval (CI) for difference in proportion: Proc StatXact was used to derive the standardized asymptotic CI for the group difference in proportions [Newcombe, 1998]. The standardized asymptotic method used is method 6.

### **Primary: Adjusted Geometric Mean Concentrations (GMC) (Pevnar13 and 12Pn Groups) for anti-6A and anti-19A pneumococcal serotypes**

End point title	Adjusted Geometric Mean Concentrations (GMC) (Pevnar13 and 12Pn Groups) for anti-6A and anti-19A pneumococcal serotypes <sup>[53]</sup>
-----------------	---

End point description:

Adjusted GMC = geometric mean antibody concentration adjusted for baseline concentration

N = number of subjects with both pre- and post-vaccination results available

Antibodies assessed for this outcome measure were those against the vaccine pneumococcal serotypes 6A and 19A (ANTI -6A and ANTI-19A).

Antibody concentrations were measured by 22F-Inhibition enzyme-linked immunosorbent assay (ELISA).

End point type	Primary
----------------	---------

End point timeframe:

1 month post-dose 3 (primary phase)

Notes:

[53] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is related to the analysis of the GMCs ratio between the 2 following groups: 12Pn group and Prevnar group.

End point values	12Pn Group	Prevnar13 Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	210	214		
Units: µg/mL				
number (not applicable)				
ANTI-6A (N=210,214)	1.09	2.07		
ANTI-19A (N=208,206)	1.19	2.76		

## Statistical analyses

Statistical analysis title	(Prevnar13/12Pn) GMCs ratio for ANTI-6A serotype
----------------------------	--

Statistical analysis description:

To demonstrate that 12Pn co-administered with Infanrix hexa™ vaccine 1 month post-dose 3 was non-inferior for at least 10 out of 12 vaccine serotypes to Prevnar13 vaccine (for 6A & 19A) or Synflorix™ vaccine (for 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F) in terms of Enzyme-linked immunosorbent assay (ELISA) GMCs.

Criteria: UL of the 2-sided 95.8% CI of the ELISA GMC ratios (Prevnar13/12Pn) and (Synflorix/12Pn) groups < a limit of 2-fold for at least 10 out of 12 vaccine pneumococcal serotypes.

Comparison groups	12Pn Group v Prevnar13 Group
Number of subjects included in analysis	424
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[54]</sup>
Parameter estimate	Adjusted GMCs ratio
Point estimate	1.9
Confidence interval	
level	95.8 %
sides	2-sided
lower limit	1.51
upper limit	2.39

Notes:

[54] - Objectives for 12-valent formulation were to be assessed sequentially after demonstration of objectives for 11-valent formulation.

2-sided 95.8% Confidence Interval (CI) adjusted 1-sided alpha = 2.08%) around the ELISA GMCs ratio between groups.

GMCs ratio and CI were obtained using ANCOVA model on the logarithm-transformed concentrations/titres, including the vaccine group as fixed effect and the pre-vaccination concentration as regressor.

<b>Statistical analysis title</b>	(Pprevnar13/12Pn) GMCs ratio for ANTI-19A serotype
Statistical analysis description:	
To demonstrate that 12Pn co-administered with Infanrix hexa™ vaccine 1 month post-dose 3 was non-inferior for at least 10 out of 12 vaccine serotypes to Pprevnar13 vaccine (for 6A & 19A) or Synflorix™ vaccine (for 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F) in terms of Enzyme-linked immunosorbent assay (ELISA) GMCs.	
Criteria: UL of the 2-sided 95.8% CI of the ELISA GMC ratios (Pprevnar13/12Pn) and (Synflorix/12Pn) groups < a limit of 2-fold for at least 10 out of 12 vaccine pneumococcal serotypes.	
Comparison groups	12Pn Group v Pprevnar13 Group
Number of subjects included in analysis	424
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[55]</sup>
Parameter estimate	Adjusted GMCs ratio
Point estimate	2.32
Confidence interval	
level	95.8 %
sides	2-sided
lower limit	1.94
upper limit	2.77

Notes:

[55] - Objectives for 12-valent formulation were to be assessed sequentially after demonstration of objectives for 11-valent formulation.

2-sided 95.8% Confidence Interval (CI) adjusted 1-sided alpha = 2.08%) around the ELISA GMCs ratio between groups.

GMCs ratio and CI were obtained using ANCOVA model on the logarithm-transformed concentrations/titres, including the vaccine group as fixed effect and the pre-vaccination concentration as regressor.

## Secondary: Concentrations of antibodies against protein D (Anti-PD) during the Primary Phase of the study

End point title	Concentrations of antibodies against protein D (Anti-PD) during the Primary Phase of the study
End point description:	
Anti-PD antibody concentrations were measured by enzyme-linked immunosorbent assay (ELISA), expressed as geometric mean concentrations (GMCs), in ELISA Units per milliliter (EL.U/mL). The cut-off of the assay was an anti-PD antibody concentration higher than or equal to ( $\geq$ ) 100 EL.U/mL.	
End point type	Secondary
End point timeframe:	
At study Month 3, e. g. at one month post-Dose 3 of pneumococcal vaccine

## Statistical analyses

No statistical analyses for this end point

## Secondary: Titers for opsonophagocytic activity against pneumococcal serotypes during the Primary Phase of the study

End point title	Titers for opsonophagocytic activity against pneumococcal serotypes during the Primary Phase of the study
End point description:	
Titers for opsonophagocytic activity assessed for this outcome measure were those for opsonophagocytic activity against the vaccine/cross-reactive pneumococcal serotypes 1, 3, 4, 5, 6A, 6B, 7F, 9V, 14, 18C, 19F and 23F (OPA -1, -3, -4, -5, -6A, -6B, -7F, -9V, -14, -18C, -19F and -23F). The cut-off of the assay was a titer for opsonophagocytic activity higher than or equal to ( $\geq$ ) 8. Testing for opsonophagocytic activity against the cross reactive pneumococcal serotype 6C will not be performed due to unavailability of a specific qualified assay.	
End point type	Secondary
End point timeframe:	
At study Month 3, e. g. at one month post-Dose 3 of pneumococcal vaccine

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Solicited symptoms: during the 4 days post-primary and post-booster vaccination. Unsolicited AEs: during 31 days post-primary and post-booster vaccination. SAEs: during the whole study period (from Day 0 to Month 11).

Adverse event reporting additional description:

Analysis of AEs & SAEs performed on subjects who received at least one primary dose or at least the booster vaccination. Analysis of solicited symptoms performed on the same subjects and for whom results were available. Occurrences (all and "related to the treatment") not calculated during the analysis are filled in with "subjects affected" info.

Assessment type	Non-systematic

### Reporting groups

Reporting group title	12Pn Group
-----------------------	------------

Reporting group description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of GSK2830930A, or 12Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 12Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 12Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Reporting group title	Synflorix Group
-----------------------	-----------------

Reporting group description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of Synflorix™ at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Synflorix™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Synflorix™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Reporting group title	Pevnar13 Group
-----------------------	----------------

Reporting group description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of Pevnar13™ vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of Pevnar13™ were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of Pevnar13™ was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

Reporting group title	11Pn Group
-----------------------	------------

Reporting group description:

Healthy male or female subjects between, and including 6 to 12 weeks (42-90 days) of age at the time of first vaccination, received a 3-dose primary vaccination course of GSK2830929A, or 11Pn, vaccine at 2, 3 and 4 months of age, followed by a booster dose of the same vaccine at 12-15 months of age, each dose being co-administered with one dose of Infanrix hexa™. The first 3 doses of 11Pn vaccine were administered intramuscularly into the right anterolateral thigh and Infanrix hexa™ was administered intramuscularly into the left anterolateral thigh. The booster dose of 11Pn vaccine was administered intramuscularly into the right deltoid (or thigh if the deltoid muscle size was not adequate) and that of Infanrix hexa™ was administered intramuscularly into the left deltoid (or thigh if the deltoid muscle size was not adequate).

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 February 2013	<p>Amendment 2</p> <p>The protocol has been amended to include the opsonophagocytic activity (OPA) testing for pneumococcal serotypes 1, 3, 4, 5, 6B, 6C, 7F, 9V, 14, 18C, 19F and 23F, in addition to the previously planned OPA testing for serotypes 6A and 19A. This testing was added to gather further evidence, early in the clinical development, of any potential impact of addition of 6A and/or 19A-CRM197 conjugates on the immune response to the 10 pneumococcal polysaccharide conjugates common with Synflorix.</p> <p>The following exploratory analyses were added:</p> <ul style="list-style-type: none"><li>• comparison of serotype-specific immune response elicited by the 11-valent and 12-valent pneumococcal conjugate vaccines versus the immune response elicited by Synflorix for the common serotypes, based on OPA GMT ratios for post-primary and post-booster timepoints and percentages of subjects with OPA titre &gt;8 for post-primary timepoint.</li><li>• comparison of serotype-specific immune response elicited by the 11-valent and 12-valent pneumococcal conjugate vaccines versus the immune response elicited by Synflorix for the common serotypes and by Prevenar 13 for the additional serotypes 6A and 19A, based on antibody GMC ratios and OPA GMT ratios for post-booster timepoint.</li><li>• comparison of the immune response to serotypes 6A and 19A elicited by the 11-valent and 12-valent pneumococcal conjugate vaccines versus the lowest response elicited by Synflorix for any of the 10 vaccine serotypes, based on percentages of subjects reaching antibody concentrations/OPA titres above defined threshold for post-primary timepoint and antibody GMC/OPA GMT ratios for post-primary and post-booster timepoints.</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Opsonophagocytic Activity results against pneumococcal serotype-19A and booster ELISA 6A results were not available at the time of writing this summary. The summary will be updated when they become available.

Notes:
