Pre-assignment

Screening details:

Group 5 (Genotype 4 (GT4) treatment-experienced, ABT-450 150 mg + ritonavir 100 mg + ABT-267 25 mg (2-DAA) regimen for 12 weeks) was not open to enrollment, based on a protocol-specified interim review of results from the treatment-naïve GT4 Groups 1 and 4 that indicated higher SVR rates among subjects receiving the 2-DAA regimen with ribavirin.

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: One subject discontinued study drug but continued the study in the post-treatment period.
