

## Clinical trial results:

### An Open Label, Multicenter, Exploratory Phase 2 Study to Evaluate the Efficacy and Safety of the Bispecific T-Cell Engager (BiTE®) Blinatumomab in Patients with Relapsed/Refractory Diffuse Large B-Cell Lymphoma (DLBCL)

#### Summary

EudraCT number	2011-005781-38
Trial protocol	DE
Global end of trial date	09 September 2015

#### Results information

Result version number	v1 (current)
This version publication date	25 September 2016
First version publication date	25 September 2016

#### Trial information

##### Trial identification

Sponsor protocol code	MT103-208
-----------------------	-----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01741792
WHO universal trial number (UTN)	-

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 September 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 September 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The purpose of this study is to confirm whether the bispecific T-cell engager blinatumomab is effective and safe in the treatment of patients with relapsed/refractory diffuse large B-cell lymphoma (DLBCL).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines, and other regulations, as applicable.

All subjects provided written informed consent before undergoing any study-related procedures, including screening procedures.

The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 July 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 25
Worldwide total number of subjects	25
EEA total number of subjects	25

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	12
From 65 to 84 years	12
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

Adults with a diagnosis of diffuse large B-cell lymphoma (DLBCL) which was refractory to first or subsequent treatment or who had a first or later relapse and were not eligible for autologous hematopoietic stem cell transplant (HSCT), or relapsed after autologous HSCT were eligible to enrol. The primary analysis cut-off date was 10 July 2014.

### Pre-assignment

Screening details:

The study was conducted sequentially in 2 stages and 3 cohorts: In Stage 1, Cohort 1 received an escalating dose of 9/28/112 µg/day blinatumomab and Cohort 2 received a constant dose of 112 µg/day for 8 weeks. In Stage 2, the Cohort 3 dose regimen was determined from the outcome of Cohorts 1 and 2.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1: Blinatumomab 9/28/112 µg/d

Arm description:

Participants received blinatumomab administered via a continuous intravenous infusion (CIV) 9 µg/day for the first week, followed by 28 µg/day for the second week, then 112 µg/day for the remaining 6 weeks of treatment during Cycle 1. Participants who achieved a complete response (CR) or partial response (PR), or had stable disease after the first treatment cycle were eligible to receive a second (consolidation) cycle of treatment over 4 weeks, following a 4-week treatment-free interval.

Arm type	Experimental
Investigational medicinal product name	Blinatumomab
Investigational medicinal product code	MT103
Other name	AMG103, BLINCYTO®
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered by continuous intravenous infusion over 8 weeks in the first cycle and 4 weeks in the second cycle.

<b>Arm title</b>	Cohort 2: Blinatumomab 112 µg/d
------------------	---------------------------------

Arm description:

Participants received blinatumomab administered CIV at a constant dose of 112 µg/day for 8 weeks of treatment during Cycle 1. Participants who achieved a CR or PR, or had stable disease after the first treatment cycle were eligible to receive a second (consolidation) cycle of treatment over 4 weeks, following a 4-week treatment-free interval.

Arm type	Experimental
Investigational medicinal product name	Blinatumomab
Investigational medicinal product code	MT103
Other name	AMG103, BLINCYTO®
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered by continuous intravenous infusion over 8 weeks in the first cycle and 4 weeks in the second cycle.

<b>Arm title</b>	Cohort 3: Blinatumomab 9/28/112 µg/d
------------------	--------------------------------------

---

**Arm description:**

Participants received blinatumomab administered CIV 9 µg/day for the first week, followed by 28 µg/day for the second week, then 112 µg/day for the remaining 6 weeks of treatment during Cycle 1.

Participants who achieved CR or PR, or had stable disease after the first treatment cycle were eligible to receive a second (consolidation) cycle of treatment over 4 weeks, following a 4-week treatment-free interval.

Arm type	Experimental
Investigational medicinal product name	Blinatumomab
Investigational medicinal product code	MT103
Other name	AMG103, BLINCYTO®
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Administered by continuous intravenous infusion over 8 weeks in the first cycle and 4 weeks in the second cycle.

<b>Number of subjects in period 1</b>	Cohort 1: Blinatumomab 9/28/112 µg/d	Cohort 2: Blinatumomab 112 µg/d	Cohort 3: Blinatumomab 9/28/112 µg/d
Started	9	2	14
Efficacy Set	7	1	13
Completed	3	1	2
Not completed	6	1	12
Death	6	1	12

### Primary: Overall objective response rate during treatment cycle 1

End point title	Overall objective response rate during treatment cycle 1 <sup>[1]</sup>
End point description: Overall response within the first treatment cycle was assessed according to Cheson criteria by a central reader. Response was evaluated using computerized tomography (CT) scans and positron emission tomography (PET) (to assess nodal disease/organ enlargement due to nodal/diffuse infiltration), and bone marrow biopsy (to assess bone marrow infiltration). Overall objective response rate (ORR) is the percentage of participants with a best overall response of complete response (CR) or partial response (PR). Complete response is defined as the disappearance of all evidence of disease and partial response is defined as regression of measurable disease and no new sites. Objective response was analyzed in the Efficacy Set which includes all participants who completed at least 7 days of infusion on the highest intended dose level.	
End point type	Primary
End point timeframe: During the first 8 weeks	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Since all subjects received blinatumomab, no statistical comparisons between arms was performed. The null hypothesis was that the response rate for participants with DLBCL treated with blinatumomab was less than 15%; if the lower bound of the 95% CI around the ORR rate was  $\geq 15\%$  the null hypothesis was rejected.

End point values	Cohort 1: Blinatumomab 9/28/112 µg/d	Cohort 2: Blinatumomab 112 µg/d	Cohort 3: Blinatumomab 9/28/112 µg/d

## Secondary: Number of participants with adverse events

End point title	Number of participants with adverse events
-----------------	--

End point description:

Adverse events were evaluated for severity according to the grading scale provided in the National Cancer Institute Common Terminology Criteria for Adverse Events (CTCAE), version 4.0.

An adverse event or suspected adverse drug reaction was considered "serious" if it resulted in one of the following outcomes:

- Resulted in death;
- Was life-threatening;
- Required inpatient hospitalization or prolongation of existing hospitalization;
- Resulted in persistent or significant incapacity or substantial disruption to conduct normal life functions;
- Was a congenital anomaly or birth defect;
- Was a medically important condition.

The Investigator used medical judgment to determine whether there was a causal relationship (ie, related [reasonably possible] or unrelated [not reasonably possible]) between an adverse event and blinatumomab.

End point type	Secondary
----------------	-----------

End point timeframe:

From the first dose of blinatumomab until up to 30 days after the last dose or until the data cut-off date of 10 July 2014, whichever occurred first; the overall median duration of treatment exposure was 46.8 days.

End point values	Cohort 1: Blinatumomab 9/28/112 µg/d	Cohort 2: Blinatumomab 112 µg/d	Cohort 3: Blinatumomab 9/28/112 µg/d

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the first dose of blinatumomab until up to 30 days after the last dose, until the data cut-off date of 10 July 2014; the overall median duration of treatment exposure was 46.8 days.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	17.0
--------------------	------

### Reporting groups

Reporting group title	Cohort 1: Blinatumomab 9/28/112 µg/d
-----------------------	--------------------------------------

Reporting group description:

Participants received blinatumomab administered CIV 9 µg/day for the first week, followed by 28 µg/day for the second week, then 112 µg/day for the remaining 6 weeks of treatment during Cycle 1.

Participants who achieved a CR or PR, or had stable disease after the first treatment cycle were eligible to receive a second (consolidation) cycle of treatment over 4 weeks, following a 4-week treatment-free interval.

Reporting group title	Cohort 2: Blinatumomab 112 µg/d
-----------------------	---------------------------------

Reporting group description:

Participants received blinatumomab administered CIV at a constant dose of 112 µg/day for 8 weeks of treatment during Cycle 1. Participants who achieved CR or PR, or had stable disease after the first treatment cycle were eligible to receive a second (consolidation) cycle of treatment over 4 weeks, following a 4-week treatment-free interval.

Reporting group title	Cohort 3: Blinatumomab 9/28/112 µg/d
-----------------------	--------------------------------------

Reporting group description:

Participants received blinatumomab administered CIV 9 µg/day for the first week, followed by 28 µg/day for the second week, then 112 µg/day for the remaining 6 weeks of treatment during Cycle 1.

Participants who achieved CR or PR, or had stable disease after the first treatment cycle were eligible to receive a second (consolidation) cycle of treatment over 4 weeks, following a 4-week treatment-free interval.

Reporting group title	Cohort 1 + 3: Blinatumomab 9/28/112 µg/d
-----------------------	--

Reporting group description:

Participants received blinatumomab administered CIV 9 µg/day for the first week, followed by 28 µg/day for the second week, then 112 µg/day for the remaining 6 weeks of treatment during Cycle 1.

Participants who achieved CR or PR, or had stable disease after the first treatment cycle were eligible to receive a second (consolidation) cycle of treatment over 4 weeks, following a 4-week treatment-free interval.

<b>Non-serious adverse events</b>	Cohort 1 + 3: Blinatumomab 9/28/112 µg/d		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	23 / 23 (100.00%)		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Neoplasm progression			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Oncologic complication			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		

Tumour pain subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Vascular disorders			
Embolism subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Haematoma subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Hypotension subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Thrombosis subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
General disorders and administration site conditions			
Asthenia subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Catheter site erythema subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Catheter site rash subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Chills subjects affected / exposed occurrences (all)	3 / 23 (13.04%) 3		
Disease progression subjects affected / exposed occurrences (all)	3 / 23 (13.04%) 4		
Facial pain subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Fatigue			

subjects affected / exposed	6 / 23 (26.09%)		
occurrences (all)	11		
General physical health deterioration			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Mucosal inflammation			
subjects affected / exposed	1 / 23 (4.35%)

Nervousness			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Sleep disorder			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Investigations			
Antithrombin III decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Blood fibrinogen increased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Blood glucose increased			
subjects affected / exposed	4 / 23 (17.39%)		
occurrences (all)	5		
Blood immunoglobulin G decreased			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Blood lactate dehydrogenase increased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Blood magnesium decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Blood potassium decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	2		
Blood sodium decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Blood uric acid increased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
C-reactive protein increased			

subjects affected / exposed	4 / 23 (17.39%)		
occurrences (all)	5		
Corneal reflex decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Fibrin D dimer increased			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Fibrinolysis increased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Gamma-glutamyltransferase increased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Hepatic enzyme increased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Neutrophil count decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
PO2 decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Platelet count decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Weight increased			
subjects affected / exposed	3 / 23 (13.04%)		
occurrences (all)	3		
White blood cell count decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Injury, poisoning and procedural complications			

Spinal compression fracture subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 2		
Cardiac disorders			
Arrhythmia subjects affected / exposed occurrences (all)	0 / 23 (0.00%) 0		
Cardiac failure subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Cardiovascular insufficiency subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Tachycardia subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Nervous system disorders			
Ataxia subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Burning sensation subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Coordination abnormal subjects affected / exposed occurrences (all)	0 / 23 (0.00%) 0		
Dizziness subjects affected / exposed occurrences (all)	2 / 23 (8.70%) 2		
Dyscalculia subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Dysgeusia subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Encephalopathy			

subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Epilepsy			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Facial paresis			
subjects affected / exposed	1 / 23 (4.35%)

## **More information**

### **Substantial protocol amendments (globally)**

Were there any global substantial amendments to the protocol? No

---

### **Interruptions (globally)**

Were there any global interruptions to the trial? No

### **Limitations and caveats**

None reported
