

## Clinical trial results:

### PHASE II TRIAL OF RITUXIMAB (MABTHERA®) PLUS LENALIDOMIDE (REVLIMID®) IN PATIENTS WITH LYMPHOMA OF THE MUCOSA ASSOCIATED LYMPHOID TISSUE (MALT)

#### Summary

EudraCT number	2011-005818-10
Trial protocol	AT
Global end of trial date	28 February 2015

#### Results information

Result version number	v2 (current)
This version publication date	05 July 2017
First version publication date	27 July 2016
Version creation reason	<ul style="list-style-type: none"><li>• New data added to full data set</li><li>• Correction of full data set</li></ul> PubMed link was added. Change in presentation of results.

#### Trial information

##### Trial identification

Sponsor protocol code	AGMT_MALT2
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01611259
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	AGMT
Sponsor organisation address	Gentzgasse 60/20, Vienna, Austria, 1180
Public contact	Daniela Wolkersdorfer, AGMT, 0043 6626404411, d.wolkersdorfer@agmt.at
Scientific contact	Richard Greil, AGMT, 0043 5725525801, r.greil@salk.at

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	28 February 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 February 2015
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

Main objective of the trial:

To evaluate the clinical potential of Rituximab plus Lenalidomide to induce objective/histologic responses in patients with MALT lymphoma

Protection of trial subjects:

Safety was monitored by reporting of clinical adverse events. Patients were assessed regularly and were counselled before each Lenalidomide cycle.

Premedication was recommended for patients at high risk for a thromboembolic event and to prevent tumor lysis syndrome.

Background therapy:

None

Evidence for comparator:

None

Actual start date of recruitment	21 May 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Austria: 50
Worldwide total number of subjects	50
EEA total number of subjects	50

Notes:

---

**Subjects enrolled per age group**

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	25

From 65 to 84 years	24
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

50 patients were enrolled in 4 sites in Austria. First patient in was 06-June-2012; last patient in was 26-May-2014.

### Pre-assignment

Screening details:

Patients with histologically confirmed MALT lymphoma with measurable disease (stage I – IV) or with first or greater relapse after HP-eradication, radiation or chemotherapy in case of gastric lymphoma. If patients were withdrawn within the first 12 weeks of the study (i.e. before the first response evaluation), they were replaced.

### Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

None

### Arms

Arm title	Treatment
-----------	-----------

Arm description:

Rituximab (Mabthera®) plus Lenalidomide (Revlimid®)

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab was administered on day 1 of each cycle in a dose of 375 mg/m<sup>2</sup> (28 day cycle). Restaging should be performed after three cycles. In case of at least stable disease, patients should receive another three courses of therapy. Patients with documented CR after 6 courses stopped therapy/study, while patients with PR or SD were given another two cycles for a maximum of 8 cycles.

Investigational medicinal product name	Lenalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Dose of lenalidomide for investigation is 20 mg/day, orally on days 1 to 21 followed by 7 days pause (28 day cycle). Restaging should be performed after three cycles. In case of at least stable disease, patients should receive another three courses of therapy. Patients with documented CR after 6 courses stopped therapy/study, while patients with PR or SD were given another two cycles for a maximum of 8 cycles.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Treatment
Started	48
Completed	34
Not completed	14
Physician decision	1
Patient decision	7
Adverse event, non-fatal	4
Lack of efficacy	2

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Two of the enrolled patients withdrew their consent prior to study treatment and did not experience adverse events due to other study procedures. These 2 patients were therefore excluded from intent-to-treat (ITT) and per-protocol (PP) efficacy assessments, safety assessments and listing of baseline characteristics.

## Baseline characteristics

### Reporting groups

Reporting group title	Treatment
Reporting group description:	
Rituximab (Mabthera®) plus Lenalidomide (Revlimid®)	

Reporting group values	Treatment	Total	
Number of subjects	48	48	
Age categorical			
Units: Subjects			
In utero		0	
Preterm newborn infants (gestational age < 37 wks)		0	
Newborns (0-27 days)		0	
Infants and toddlers (28 days-23 months)		0	
Children (2-11 years)		0	
Adolescents (12-17 years)		0	
Adults (18-64 years)		0	
From 65-84 years		0	
85 years and over		0	
Age continuous			
Units: years			
median	65		
full range (min-max)	33 to 85	-	
Gender categorical			
Units: Subjects			
Female	29	29	
Male	19	19	

## End points

### End points reporting groups

Reporting group title	Treatment
Reporting group description: Rituximab (Mabthera®) plus Lenalidomide (Revlimid®)	
Subject analysis set title	Efficacy assessment
Subject analysis set type	Intention-to-treat
Subject analysis set description: 48 patients were included into safety assessment, two of them received treatment but no efficacy assessment was available. Therefore, these two patients were neither included into Intention-to-treat nor Per-protocol efficacy analysis.	

### Primary: Response

End point title	Response <sup>[1]</sup>
End point description: The primary objective of this Phase II study is to evaluate the proportion of patients responding to Lenalidomide and Rituximab. In case of a response rate of < 40%, the combination is rejected as ineffective, while an active combination is defined at a minimum response rate of 60% based on findings with rituximab and lenalidomide mono-therapy.	
End point type	Primary
End point timeframe: 40 weeks	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis is provided as this is an one armed, open label, non-comparative study.

End point values	Efficacy assessment			
Subject group type	Subject analysis set			
Number of subjects analysed	46			
Units: Patients				
CR	25			
PR or SD	20			
PD	1			

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All AEs were recorded by the Investigator from the time the subject signs informed consent to 28 days after the last dose of study medication.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 April 2013	New site added, shipment of blood samples clarified in protocol

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None
------

Notes:

---
