

## Clinical trial results:

**A phase II, randomized, double-blind study of Priorix-Tetra (combined measles-mumps-rubella-varicella vaccine), one lot using new measles and rubella working seeds and one lot using old working seeds, in healthy subjects aged 11 to 21 months**

### Summary

EudraCT number	2011-005881-38
Trial protocol	Outside EU/EEA
Global end of trial date	13 December 2010

### Results information

Result version number	v1
This version publication date	27 April 2016
First version publication date	30 July 2015

### Trial information

#### Trial identification

Sponsor protocol code	108760
-----------------------	--------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00892775
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 September 2010
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 September 2010
Global end of trial reached?	Yes
Global end of trial date	13 December 2010
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate the non-inferiority of MeMuRu-OKAnew WS to MeMuRu-OKA in terms of seroconversion rate to the measles, mumps, rubella, varicella components after the first dose.

Criterion for non-inferiority (43 days after dose 1): For each antibody to mumps (ELISA), measles (ELISA), rubella (ELISA), varicella (IFA), lower limit of the standardized asymptotic 95% CI for the group difference (MeMuRu OKAnew WS minus MeMuRu-OKA) in the percentage of subjects with seroconversion is -10% (clinical limit for non-inferiority).

Protection of trial subjects:

The subjects were observed closely for at least 30 minutes, with appropriate medical treatment readily available in case of a rare anaphylactic reaction following the administration of vaccines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 June 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Singapore: 250
Country: Number of subjects enrolled	Taiwan: 251
Worldwide total number of subjects	501
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	501
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Three subjects were enrolled but not vaccinated, of which one subject was assigned to the MMRVnew WS Group, and remaining two subjects were not assigned a treatment group.

### Pre-assignment

Screening details:

During the screening the following steps occurred: check for inclusion/exclusion criteria, contraindications/precautions, medical history of the subjects and signing informed consent forms.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	MMRVnew WS Group

Arm description:

Subjects received 2 doses of GlaxoSmithKline (GSK) Biologicals' live attenuated measles mumps rubella varicella vaccine formulated with new measles and rubella working seeds (MMRVnew WS) at Day 0 and Week 12

Arm type	Experimental
Investigational medicinal product name	Priorix-Tetra
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Two doses of MMRVnew WS vaccine administered by subcutaneous injections in the upper arm

<b>Arm title</b>	MMRV Group
------------------	------------

Arm description:

Subjects received 2 doses of GSK Biologicals' live attenuated measles-mumps-rubella-varicella (MMRV) vaccine manufactured with current working seed virus or new measles and rubella working seeds at Day 0 and Week 12

Arm type	Active comparator
Investigational medicinal product name	Priorix-Tetra
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Two doses of MMRV vaccine administered subcutaneously in the upper arm

<b>Number of subjects in period 1<sup>[1]</sup></b>	MMRVnew WS Group	MMRV Group
Started	332	166
Completed	327	165
Not completed	5	1
Consent withdrawn by subject	-	1
Migrated/moved from study area	1	-
The subject had difficulty with blood drawing	1	-
Because of H1N1 the parents give up participating	1	-
Lost to follow-up	1	-
Protocol deviation	1	-

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Three subjects were enrolled but not vaccinated, of which one subject was assigned to the MMRVnew WS Group, and remaining two subjects were not assigned a treatment group.

## Baseline characteristics

### Reporting groups

Male	166	82	248

## End points

### End points reporting groups

Reporting group title	MMRVnew WS Group
Reporting group description: Subjects received 2 doses of GlaxoSmithKline (GSK) Biologicals' live attenuated measles mumps rubella varicella vaccine formulated with new measles and rubella working seeds (MMRVnew WS) at Day 0 and Week 12	
Reporting group title	MMRV Group
Reporting group description: Subjects received 2 doses of GSK Biologicals' live attenuated measles-mumps-rubella-varicella (MMRV) vaccine manufactured with current working seed virus or new measles and rubella working seeds at Day 0 and Week 12	

### Primary: Number of subjects seroconverted for measles, mumps, rubella and varicella antibodies above the cut-off value.

End point title	Number of subjects seroconverted for measles, mumps, rubella and varicella antibodies above the cut-off value.
End point description: Seroconversion was defined as the appearance of antibodies (i.e. titre greater than or equal to the cut-off value) in the serum of subjects seronegative before vaccination. The cut-off values for seroconversion was 150 mIU/mL, 231 U/mL, 4 IU/mL and 1:4 dilution for measles, mumps, rubella and varicella, respectively.	
End point type	Primary
End point timeframe: At 42-56 days after the first dose of study vaccine (Week 6).	

End point values	MMRVnew WS Group	MMRV Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	314	157		
Units: Subjects				
Anti-measles $\geq$ 150 mIU/mL	312	157		
Anti-mumps $\geq$ 231 U/ML	279	142		
Anti-rubella $\geq$ 4 IU/mL	313	157		
IgG varicella antibodies $\geq$ 1:4 dilution	284	131		

### Statistical analyses

Statistical analysis title	Non-inferiority of MMRVnew WS to MMRV
Statistical analysis description: Non-inferiority of GSK Biologicals' MMRV new formulation vaccine (MMRVnew WS) compared to MMRV vaccine after the first dose in terms of anti-measles seroconversion rates, 42 – 56 days after the first dose. Non-inferiority with respect to seroconversion rates for measles 42-56 days after vaccination was concluded if the lower limit of the 95% CI around the difference in seroconversion rates between groups would be $[-10\%]$ or higher.	
Comparison groups	MMRVnew WS Group v MMRV Group

Number of subjects included in analysis	471
Analysis specification	Pre-specified
Analysis type	non-inferiority
Parameter estimate	Difference in percentage
Point estimate	-0.64
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.29
upper limit	1.76

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

[10] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: For the analysis of solicited symptom, missing or non-evaluable measurements were not replaced. Therefore the analysis of the solicited symptoms based on the Total Vaccinated cohort included only subjects with documented safety data (i.e. symptom screen/sheet completed).

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
