

Clinical trial results:

A Phase III randomized, double-blind, placebo-controlled multicenter study of subcutaneous secukinumab in prefilled syringes to demonstrate the efficacy at 24 weeks and to assess the long term efficacy, safety, tolerability and usability up to 5 years in patients with active rheumatoid arthritis who have an inadequate response to anti-TNF-agents

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 May 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 May 2015
Global end of trial reached?	Yes
Global end of trial date	11 May 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that the efficacy of secukinumab 75 mg or 150 mg at Week 24 is superior to placebo in patients with active Rheumatoid Arthritis (RA) based on the proportion of patients achieving an American College of Rheumatology (ACR)20 response.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 October 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 9
Country: Number of subjects enrolled	Brazil: 11

Country: Number of subjects enrolled	Portugal: 2
Country: Number of subjects enrolled	South Africa: 5
Country: Number of subjects enrolled	United States: 82
Country: Number of subjects enrolled	Greece: 9
Worldwide total number of subjects	242
EEA total number of subjects	65

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	201
From 65 to 84 years	41
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

RA classified by ACR 2010 revised criteria for at least 3 months before screening and at baseline, Disease activity criteria defined by ≥ 6 tender joints out of 68 and ≥ 6 swollen joints out of 66.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	AIN457 75 mg

Arm description:

Patients received AIN457 75 mg as subcutaneous (s.c.) loading dose once weekly at baseline (BSL), Weeks 1, 2, 3 and 4, followed by monthly maintenance starting at Week 4.
Patients on secukinumab 75 mg continued to receive secukinumab 75 mg via PFS every 4 weeks regardless of week 16 responder status.

Arm type	Experimental
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

75 mg in 0.5ml PFS for injection

Arm title	AIN457 150mg
------------------	--------------

Arm description:

Patients received AIN457 150 mg as subcutaneous (s.c.) loading dose once weekly at baseline (BSL), Weeks 1, 2, 3 and 4, followed by monthly maintenance starting at Week 4.
Patients on secukinumab 150 mg continued to receive secukinumab 150 mg via PFS every 4 weeks regardless of week 16 responder status.

Arm type	Experimental
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

150 mg in 1.0ml PFS for injection

Arm title	Placebo
------------------	---------

Arm description:

Patients received placebo as subcutaneous (s.c.) loading dose once weekly at baseline (BSL), Weeks 1, 2, 3 and 4, followed by monthly maintenance starting at Week 4.
At Wk 16, patients were classified: responders or non-responders. Placebo patients who were non-responders were re-randomized at Wk 16 to AIN457 75 mg or AIN457 150 mg (1:1).

Patients on placebo who were responders continued to receive placebo until Wk 24; these patients were re-randomized to receive AIN457 75 mg or AIN457 150 mg (1:1).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	Placebo
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

placebo in 0.5 or 1.0ml PFS for injection (Double Dummy Design)

Secondary: Change from baseline in Disease Activity Score utilizing CRP (DAS28-CRP)

End point title	Change from baseline in Disease Activity Score utilizing CRP (DAS28-CRP)
End point description: The DAS28 is a measure of disease activity in RA based on Swollen and Tender Joint Counts (out of a total of 28), hsCRP and the Patient's Global Assessment of Disease Activity. A DAS28 score greater than 5.1 implies active disease, equal to or less than 3.2 low disease activity, and less than 2.6 remission. A negative change from baseline indicates improvement.

Secondary: Change from baseline in Stanford Health Assessment Questionnaire Disability Index (HAQ-DI)

End point title	Change from baseline in Stanford Health Assessment Questionnaire Disability Index (HAQ-DI)
-----------------	--

End point description:

The HAQ-DI assesses a subject's level of functional ability and includes questions of fine movements of the upper extremity, locomotor activities of the lower extremity, and activities that involve both upper and lower extremities. There are 20 questions in 8 categories of functioning including dressing, rising, eating, walking, hygiene, reach, grip and usual activities. The stem of each item asks 'Over the past week, "are you able to..." perform a particular task'. Each item is scored on a 4 point scale from 0 - 3, representing normal, no difficulty (0), some difficulty (1), much difficulty (2) and unable to do (3). The disability index score is calculated as the mean of the available category scores, ranging from 0 to 3. A negative change from baseline indicates improvement.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 June 2012	<ul style="list-style-type: none">• To align the sequence of the hierarchical testing strategy with latest FDA guidance released May 2013 for clinical trials in patients with RA.• To fulfill health authority requests with regards to local requirements for additional serological testing (hepatitis B, hepatitis C or Human Immunodeficiency Virus (HIV)) prior to initiation of therapy.• To fulfill a health authority request, to limit blinded study duration to reduce patient burden in administering a second syringe containing placebo to maintain blind. At the time of this amendment, approximately half of the patients had been randomized. This amendment was not considered to have affected the interpretation of study results as the changes were minor and occurred prior to study unblinding.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study was terminated early (unrelated to safety) due to the analysis of AIN457F2309 study, which the data showed that secukinumab is not comparable to current RA treatments thus closing the AIN457 RA program.

Notes:
