Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 April 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	02 December 2014
Global end of trial reached?	Yes
Global end of trial date	02 December 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to compare the efficacy of palifosfamide-tris in combination with carboplatin and etoposide (PaCE) chemotherapy to carboplatin and etoposide (CE) alone, as measured by overall survival (OS), in chemotherapy naïve subjects with extensivestage SCLC

Protection of trial subjects:

This study was performed in compliance with Good Clinical Practices (GCP), including the archiving of essential documents.

Background therapy:

Carboplatin and etoposide were obtained by each study center as commercially available drug products and stored/used per label instructions. For those sites in the European Union that were not able to obtain the comparators commercially, the Sponsor provided the comparator products. Lot numbers N09770 Carboplatin 450 mg/45 mL, N10216 Carboplatin 50 mg/5 mL, 12G02LC Etoposide-Teva active 200 mg/10 mL

Evidence for comparator:

Carboplatin and etoposide were obtained by each study center as commercially available drug products and stored/used per label instructions. For those sites in the European Union that were not able to obtain the comparators commercially, the Sponsor provided the comparator products. Lot numbers N09770 Carboplatin 450 mg/45 mL, N10216 Carboplatin 50 mg/5 mL, 12G02LC Etoposide-Teva active 200 mg/10 mL

Actual start date of recruitment	08 June 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 4
Country: Number of subjects enrolled	Russian Federation: 45
Country: Number of subjects enrolled	Taiwan: 3
Country: Number of subjects enrolled	Ukraine: 17
Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	United Kingdom: 13
Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Hungary: 3
Country: Number of subjects enrolled	Italy: 4
Country: Number of subjects enrolled	United States: 60
Country: Number of subjects enrolled	Canada: 14

Country: Number of subjects enrolled	Israel: 4
Worldwide total number of subjects	188
EEA total number of subjects	41

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	118
From 65 to 84 years	70
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment was initiated on 08 Jun 2012 (first subject enrolled) to 02 Dec 2014 (last subject last follow-up) in a total of 12 countries globally.

Pre-assignment

Screening details:

Screening tests are specified in the Protocol Section 5, Schedule of Study Procedures and Assessments. Principal Investigators (PIs) at each site are responsible for maintaining a record of all subjects screened, including both those who enter the study and those who are excluded.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Open-label trial design

Arms

Are arms mutually exclusive?	Yes
Arm title	Palifosfamide-tris with Carboplatin and Etoposide

Arm description:

Palifosfamide-tris, a Novel DNA Crosslinker, in Combination with Carboplatin and Etoposide (PaCE) Chemotherapy: PaCE chemotherapy consisting of palifosfamide-tris (130 mg/m²/day) and etoposide (100 mg/m²/day) on Days 1, 2, and 3, and carboplatin (target AUC of 4 mg/mL/min [maximum of 600 mg]) on Day 1 of a 21-day treatment cycle.

Arm type	Experimental
Investigational medicinal product name	Palifosfamide-tris
Investigational medicinal product code	Palifosfamide
Other name	Zymafos, ZIO-201
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

130 mg/m² milligram(s)/square meter per day. Intravenous use.

Arm title	Carboplatin and Etoposide (CE) Chemotherapy
------------------	---

Arm description:

Carboplatin and Etoposide (CE) Alone in Chemotherapy Naïve Patients with Extensive-Stage Small Cell Lung Cancer: control group received CE chemotherapy consisting of etoposide (100 mg/m²/day) on Days 1, 2, and 3, and carboplatin (target AUC of 5 mg/mL/min [maximum of 750 mg]) on Day 1 of a 21-day treatment cycle.

Arm type	Background therapy
Investigational medicinal product name	Carboplatin and Etoposide
Investigational medicinal product code	CE
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

The control group received CE chemotherapy consisting of etoposide (100 mg/m²/day) on Days 1, 2, and 3, and carboplatin (target AUC of 5 mg/mL/min [maximum of 750 mg]) on Day 1 of a 21-day treatment cycle.

Number of subjects in period 1	Palifosfamide-tris with Carboplatin and Etoposide	Carboplatin and Etoposide (CE) Chemotherapy
Started	94	94
Completed	94	94

Primary: Efficacy end point

End point title	Efficacy end point
End point description: Survival was measured from the date of randomization. Follow-up information included vital status and interim cancer history (e.g., anticancer treatments received). This information was recorded at least every 12 ± 2 weeks following the post-treatment safety assessment visit until the targeted number of deaths was observed or until 1 year following the completion of enrollment, whichever was later.	
End point type	Primary
End point timeframe: Overall survival - Time (months)	

End point values	Palifosfamide-tris with Carboplatin and Etoposide	Carboplatin and Etoposide (CE) Chemotherapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	92	91		
Units: Time (months)				
number (not applicable)	10.03	10.37		

Statistical analyses

Statistical analysis title	Efficacy analysis:
Statistical analysis description: Median OS times for the PaCE (10.03 months) and CE (10.37 months) chemotherapy groups were not significantly different (p=0.096). Overall, median OS was consistent with study assumptions. The Cox proportional HR without interactions favored CE chemotherapy and the difference was statistically significant (p=0.031) after adjustment for baseline age category, gender, ECOG PS, and region. A Cox proportional hazards regression with interactions was also performed.	
Comparison groups	Palifosfamide-tris with Carboplatin and Etoposide v Carboplatin

	and Etoposide (CE) Chemotherapy
Number of subjects included in analysis	183
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
P-value	= 0.096
Method	Regression, Cox
Parameter estimate	Cox proportional hazard
Confidence interval	
level	95 %
sides	1-sided
lower limit	0.95
upper limit	1.78
Variability estimate	Standard deviation

Notes:

[1] - Median OS times for the PaCE (10.03 months) and CE (10.37 months) chemotherapy groups were not significantly different (p=0.096).

Secondary: Safety: assess progression free survival

End point title	Safety: assess progression free survival
End point description:	
Secondary:	
	-Assess potential prognostic factors for OS (i.e., Eastern Cooperative Oncology Group performance status [ECOG PS], age, gender, and region)
	-Assess the safety as characterized by serious adverse events (SAEs)
End point type	Secondary
End point timeframe:	
Overall survival:	

End point values	Palifosfamide-tris with Carboplatin and Etoposide	Carboplatin and Etoposide (CE) Chemotherapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	92	91		
Units: Percentage SAE events per arm	20	20		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The safety of study treatments was assessed by the frequency and severity of SAEs within the overall survival timeframe defined by the protocol, including follow-up after treatment.

Adverse event reporting additional description:

An AE was defined as any untoward medical occurrence associated with the use of a drug in humans whether or not considered drug related. Treatment-emergent AEs defined if started on or after the date of treatment with study drug.

Assessment type	Systematic
