Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 June 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 February 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Efficacy: To estimate the change in naïve B cells following belimumab 10 mg/kg (or placebo) in addition to standard of care immunosuppressants in renal transplant patients from the time of transplantation up to 24 weeks.

Safety: To assess the safety and tolerability of belimumab 10 mg/kg (or placebo) in renal transplant patients in addition to standard of care immunosuppressants.

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 25
Worldwide total number of subjects	25
EEA total number of subjects	25

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	22
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 25 renal transplant recipients were enrolled. Participants were randomized to 1 of the 2 treatments groups in a 1:1 ratio and received standard of care in addition to investigational products (IPs). Participants received IP infusion on Day 0, Day 14, Day 28 and every 4 weeks thereafter for a total of 7 infusions.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received normal saline (0.9% sodium chloride) via intravenous infusion over 1 hour, every 4 weeks for 24 weeks (with an additional dose at week 2) in addition to standard of care assessments, treatment and other interventions according to institutional protocols from the time of transplantation throughout the study.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received normal saline (0.9% sodium chloride) via intravenous infusion over 1 hour, every 4 weeks for 24 weeks (with an additional dose at week 2)

Arm title	Belimumab 10mg/kg
------------------	-------------------

Arm description:

Participants received 10 milligram (mg) /kilogram (kg) belimumab in 250 milliliter (mL) normal saline via intravenous infusion over 1 hour, every 4 weeks for 24 weeks (with an additional dose at week 2) standard of care assessments, treatment and other interventions according to institutional protocols from the time of transplantation throughout the study.

Arm type	Experimental
Investigational medicinal product name	Belimumab 10mg/kg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received 10 milligram (mg) /kilogram (kg) belimumab in 250 milliliter (mL) normal saline via intravenous infusion over 1 hour, every 4 weeks for 24 weeks (with an additional dose at week 2)

Number of subjects in period 1	Placebo	Belimumab 10mg/kg
Started	13	12
Completed	11	9
Not completed	2	3
Adverse event, serious fatal	1	-
Consent withdrawn by subject	1	1
Adverse event, non-fatal	-	2

Primary: Change from Baseline in naïve B cells from Baseline to Week 24

End point title	Change from Baseline in naïve B cells from Baseline to Week 24
End point description: Naïve B cell is cell that is not exposed to antigen. Naïve B cell count is CD20+CD27 concentration of cells (conc-cell)/cubic millimeter (cumm). Change from Baseline in naïve B cells was calculated as the value at Week 24 minus the value at Baseline. MITT Population consisted of all participants randomized to treatment, who have had taken at least one dose of study. Participants analyzed included those who had data at Week 24 for naïve B cells count (MITT Population). Baseline value used in the analysis was of Day 0 (Day of transplant). Adjusted mean differences (treatment-placebo) and 95% confidence intervals for differences were obtained from mixed-models repeated-measures (MMRM) model, with fixed categorical effects of treatment, visit, donor type and treatment-by-visit interaction and fixed continuous covariates of Baseline and Baseline-by-visit interaction. A compound symmetry variance structure was used to model the within-participant errors, shared across treatments.	
End point type	Primary
End point timeframe: Baseline and Week 24	

End point values	Placebo	Belimumab 10mg/kg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9 ^[1]	7		
Units: Conc-cells/cumm				
least squares mean (standard error)	4 (± 25.55)	-30.4 (± 27.5)

Statistical analyses

Statistical analysis title	Statistical analysis 1
Comparison groups	Belimumab 10mg/kg v Placebo

Number of subjects included in analysis	16
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Mean difference (final values)
Point estimate	-34.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-109.5
upper limit	40.7
Variability estimate	Standard error of the mean
Dispersion value	37.24

Primary: Number of participants with Adverse events (AEs), Serious adverse events (SAEs) and Adverse Events of Special Interest (AESI)

End point title	Number of participants with Adverse events (AEs), Serious adverse events (SAEs) and Adverse Events of Special Interest (AESI) ^[2]
-----------------	--

End point description:

Number of participants with AEs, SAEs and AESI are summarized. The On-treatment (OT) phase started on the day and time of receiving the start of the first infusion and ended on the last dose date plus 28 days. The Post-treatment (PT) phase started 29 days after day of last dose up to 1 year. An AE is any untoward medical occurrence, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. SAE is defined as any untoward medical occurrence that at any dose results in, death, is life threatening, Requires hospitalization or prolongation of existing hospitalization, Results in disability/incapacity, Is a congenital anomaly/birth defect or event that but may jeopardize the subject or may require medical or surgical intervention to prevent one of the other outcomes listed. AESI included malignant neoplasms, infusion/anaphylaxis/hypersensitivity reactions, all infections, depression/suicide/self-injury, deaths.

End point type	Primary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious adverse events (SAEs) and non-serious adverse events (AEs) were collected from the start of study medication until follow-up (up to 52 weeks).

Adverse event reporting additional description:

On-treatment SAEs and non-serious AEs are reported for MITT Population.

Cold sweat subjects affected / exposed occurrences (all)	0 / 12 (0.00%) 0	1 / 13 (7.69%) 1	
Hyperhidrosis subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1	0 / 13 (0.00%) 0	
Vasculitic rash subjects affected / exposed occurrences (all)	0 / 12 (0.00%) 0	1 / 13 (7.69%) 1	
Renal and urinary disorders Renal artery stenosis subjects affected / exposed occurrences (all)	0 / 12 (0.00%) 0	1 / 13 (7.69%) 1	
Musculoskeletal and connective tissue disorders Myalgia subjects affected / exposed occurrences (all)	0 / 12 (0.00%) 0	1 / 13 (7.69%) 1	
Infections and infestations Urinary tract infection subjects affected / exposed occurrences (all)	4 / 12 (33.33%) 4	2 / 13 (15.38%) 3	
Lower respiratory tract infection subjects affected / exposed occurrences (all)	2 / 12 (16.67%) 2	1 / 13 (7.69%) 1	
Nasopharyngitis subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1	2 / 13 (15.38%) 2	
Tonsillitis subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1	1 / 13 (7.69%) 1	
Wound infection subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1	1 / 13 (7.69%) 1	
Onychomycosis subjects affected / exposed occurrences (all)	0 / 12 (0.00%) 0	1 / 13 (7.69%) 1	

Oral candidiasis			
subjects affected / exposed	0 / 12 (0.00%)	1 / 13 (7.69%)	
occurrences (all)	0	1	
Pneumonia			
subjects affected / exposed	0 / 12 (0.00%)	1 / 13 (7.69%)	
occurrences (all)	0	1	
Polyomavirus-associated nephropathy			
subjects affected / exposed	1 / 12 (8.33%)	0 / 13 (0.00%)	
occurrences (all)	1	0	
Renal cyst infection			
subjects affected / exposed	0 / 12 (0.00%)	1 / 13 (7.69%)	
occurrences (all)	0	1	
Upper respiratory tract infection			
subjects affected / exposed	0 / 12 (0.00%)	1 / 13 (7.69%)	
occurrences (all)	0	1	
Urinary tract infection enterococcal			
subjects affected / exposed	1 / 12 (8.33%)	0 / 13 (0.00%)	
occurrences (all)	1	0	
Vulvovaginal candidiasis			
subjects affected / exposed	1 / 12 (8.33%)	0 / 13 (0.00%)	
occurrences (all)	1	0	
Metabolism and nutrition disorders			
Diabetes mellitus			
subjects affected / exposed	1 / 12 (8.33%)	1 / 13 (7.69%)	
occurrences (all)	1	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 April 2013	The protocol has been amended to provide clarification that this study is not powered to detect clinical efficacy endpoints, and that there is a strong focus on biomarker endpoints to help determine the potential for efficacy. The study objectives have been reworded to reflect a greater emphasis on defining pharmacodynamic responses with belimumab and understanding the impact of belimumab on biomarkers in order to provide a clear assessment of potential for clinical efficacy with belimumab. Endpoints and analysis sections and the Time and Events table have been updated accordingly.
01 July 2013	The protocol has been amended to provide clarification of the randomisation strategy and to update sponsor team contact details.
04 September 2013	The protocol has been amended to provide clarification of timings of study events, correction of safety statement, addition of information from IB update and typographic errors have been addressed.
16 October 2013	The protocol has been amended to change the eligibility criteria of the donor kidney.
19 May 2014	The protocol has been amended to update safety information and to include additional sites. Changes have been made to the endpoints, infusion times on Day 0 and the randomization procedure. Clarity is provided surrounding the number enrolled and randomized to achieve 20 completed subjects. Reference to a supplement has been added which has been issued for the current IB. Changes have been made to the statistical analysis section to ensure consistency with the endpoint section and the primary analysis has been clarified.
21 July 2015	The protocol has been amended to remove the planned interim data analysis (programming and statistical analysis) of the data up to and including week 24. Analysis of all data will now be undertaken following the week 52 time point (end of study).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
