

## Clinical trial results:

### A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Dose-Ranging Study to Assess the Efficacy, Safety, Tolerability, and Pharmacokinetics of BII033 in Subjects With Relapsing Forms of Multiple Sclerosis When Used Concurrently With Avonex®

#### Summary

EudraCT number	2011-006262-40
Trial protocol	CZ IT NL HU ES GB
Global end of trial date	29 March 2016

#### Results information

Result version number	v1 (current)
This version publication date	08 April 2017
First version publication date	08 April 2017

#### Trial information

##### Trial identification

Sponsor protocol code	215MS201
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Biogen
Sponsor organisation address	225 Binney Street, Cambridge, United States, 02142
Public contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com
Scientific contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 March 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 March 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study is to evaluate the efficacy of BIIB033 in participants with active relapsing multiple sclerosis (MS) when used concurrently with Avonex.

Secondary objectives of this study in this study population are to assess the safety, tolerability, and population pharmacokinetics of BIIB033 when used concurrently with Avonex.

Protection of trial subjects:

Written informed consent was obtained from each subject prior to evaluations being performed for eligibility. Subjects were given adequate time to review the information in the informed consent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study. Through the informed consent process each subject was made aware of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy:

Avonex at 30 µg administered IM once weekly is marketed around the world as a therapeutic agent for patients with relapsing forms of MS to slow the accumulation of physical disability and decrease the frequency of clinical exacerbations. Efficacy has also been demonstrated in MS patients who have experienced a first clinical episode and have MRI features consistent with MS.

Evidence for comparator: -

Actual start date of recruitment	13 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 118
Country: Number of subjects enrolled	Serbia: 75
Country: Number of subjects enrolled	United States: 52
Country: Number of subjects enrolled	Czech Republic: 48
Country: Number of subjects enrolled	Russian Federation: 35
Country: Number of subjects enrolled	Spain: 23
Country: Number of subjects enrolled	Italy: 18
Country: Number of subjects enrolled	Netherlands: 12
Country: Number of subjects enrolled	Canada: 11
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	France: 9
Country: Number of subjects enrolled	Hungary: 7

Worldwide total number of subjects	419
EEA total number of subjects	246

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	419
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Subjects were screened within 28 days prior to the first dose of study treatment.

### Pre-assignment period milestones

Number of subjects started	419
----------------------------	-----

Number of subjects completed	418
------------------------------	-----

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	randomized and not dosed: 1
----------------------------	-----------------------------

### Period 1

Period 1 title	Overall Study (overall period)
----------------	--------------------------------

Is this the baseline period?	Yes
------------------------------	-----

Allocation method	Randomised - controlled
-------------------	-------------------------

Blinding used	Double blind
---------------	--------------

Roles blinded	Subject, Investigator, Carer
---------------	------------------------------

Blinding implementation details:

All study staff were blinded to the subject treatment assignments (BIIB033 plus Avonex or placebo plus Avonex) with the exception of the unblinded Pharmacist or designee, who was responsible for preparing the study treatments, and the unblinded Pharmacy Monitor. Avonex was supplied open label.

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
-----------	---------

Arm description:

Placebo once every 4 weeks intravenous (IV) infusion up to Week 72. Avonex once-weekly intramuscular (IM) injection up to Week 84.

Arm type	Placebo
----------	---------

Investigational medicinal product name	sterile normal saline (0.9% sodium chloride)
--	--

Investigational medicinal product code	
--	--

Other name	
------------	--

Pharmaceutical forms	Solution for infusion
----------------------	-----------------------

Routes of administration	Intravenous use
--------------------------	-----------------

Dosage and administration details:

The manufacturer's directions for material storage and handling were followed, as were standard clinical practices for ensuring sterility of the material.

Investigational medicinal product name	Avonex
--	--------

Investigational medicinal product code	
--	--

Other name	interferon beta-1a
------------	--------------------

Pharmaceutical forms	Solution for injection
----------------------	------------------------

Routes of administration	Intramuscular use
--------------------------	-------------------

Dosage and administration details:

Avonex was supplied as liquid prefilled (Luer lock) syringes (i.e., Avonex Prefilled Syringe) and autoinjector pens (i.e., Avonex Pen®) for self-administration by IM (or via a proxy) once weekly in countries in which the Avonex Pen is approved. In countries in which the Avonex Pen is not approved, the Avonex Prefilled Syringe was provided.

<b>Arm title</b>	BIIB033, 3 mg/kg
Arm description: BIIB033 3 mg/kg once every 4 weeks IV infusion up to Week 72. Avonex once-weekly IM injection up to Week 84.	
Arm type	Experimental
Investigational medicinal product name	Avonex
Investigational medicinal product code	
Other name	interferon beta-1a
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use
Dosage and administration details: Avonex was supplied as liquid prefilled (Luer lock) syringes (i.e., Avonex Prefilled Syringe) and autoinjector pens (i.e., Avonex Pen®) for self-administration by IM (or via a proxy) once weekly in countries in which the Avonex Pen is approved. In countries in which the Avonex Pen is not approved, the Avonex Prefilled Syringe was provided.	
Investigational medicinal product name	BIIB033
Investigational medicinal product code	
Other name	Human anti-LINGO-1 monoclonal antibody
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: BIIB033 was administered by IV infusion following dilution into saline as specified in the Directions for Handling and Administration (DHA).	
<b>Arm title</b>	BIIB033, 10 mg/kg
Arm description: BIIB033 10 mg/kg once every 4 weeks IV infusion up to Week 72. Avonex once-weekly IM injection up to Week 84.	
Arm type	Experimental
Investigational medicinal product name	Avonex
Investigational medicinal product code	
Other name	interferon beta-1a
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use
Dosage and administration details: Avonex was supplied as liquid prefilled (Luer lock) syringes (i.e., Avonex Prefilled Syringe) and autoinjector pens (i.e., Avonex Pen®) for self-administration by IM (or via a proxy) once weekly in countries in which the Avonex Pen is approved. In countries in which the Avonex Pen is not approved, the Avonex Prefilled Syringe was provided.	
Investigational medicinal product name	BIIB033
Investigational medicinal product code	
Other name	Human anti-LINGO-1 monoclonal antibody
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: BIIB033 was administered by IV infusion following dilution into saline as specified in the Directions for Handling and Administration (DHA).	
<b>Arm title</b>	BIIB033, 30 mg/kg
Arm description: BIIB033 30 mg/kg once every 4 weeks IV infusion up to Week 72. Avonex once-weekly IM injection up to Week 84.	
Arm type	Experimental

Investigational medicinal product name	BIIB033
Investigational medicinal product code	
Other name	Human anti-LINGO-1 monoclonal antibody
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

BIIB033 was administered by IV infusion following dilution into saline as specified in the Directions for Handling and Administration (DHA).

Investigational medicinal product name	Avonex
Investigational medicinal product code	
Other name	interferon beta-1a
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Avonex was supplied as liquid prefilled (Luer lock) syringes (i.e., Avonex Prefilled Syringe) and autoinjector pens (i.e., Avonex Pen®) for self-administration by IM (or via a proxy) once weekly in countries in which the Avonex Pen is approved. In countries in which the Avonex Pen is not approved, the Avonex Prefilled Syringe was provided.

<b>Arm title</b>	BIIB033, 100 mg/kg
------------------	--------------------

Arm description:

BIIB033 100 mg/kg once every 4 weeks IV infusion up to Week 72. Avonex once-weekly IM injection up to Week 84.

Arm type	Experimental
Investigational medicinal product name	Avonex
Investigational medicinal product code	
Other name	interferon beta-1a
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Avonex was supplied as liquid prefilled (Luer lock) syringes (i.e., Avonex Prefilled Syringe) and autoinjector pens (i.e., Avonex Pen®) for self-administration by IM (or via a proxy) once weekly in countries in which the Avonex Pen is approved. In countries in which the Avonex Pen is not approved, the Avonex Prefilled Syringe was provided.

Investigational medicinal product name	BIIB033
Investigational medicinal product code	
Other name	Human anti-LINGO-1 monoclonal antibody
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

BIIB033 was administered by IV infusion following dilution into saline as specified in the Directions for Handling and Administration (DHA).

### Secondary: Number of Participants Experiencing Adverse Events (AEs) and Serious Adverse Events (SAEs) and Discontinuations Due to AEs

End point title	Number of Participants Experiencing Adverse Events (AEs) and Serious Adverse Events (SAEs) and Discontinuations Due to AEs
-----------------	--

#### End point description:

An AE was any untoward medical occurrence that did not necessarily have a causal relationship with this treatment. An SAE was any untoward medical occurrence that at any dose: resulted in death; in the view of the Investigators, placed the participant at immediate risk of death (a life-threatening event); however, this did not include an event that, had it occurred in a more severe form, might have caused death; required inpatient hospitalization or prolongation of existing hospitalization; resulted in persistent or significant disability/incapacity; resulted in a congenital anomaly/birth defect; any other medically important event that, in the opinion of the Investigators, could have jeopardized the participant or may have required intervention to prevent one of the other outcomes listed in the definition above.

End point type	Secondary

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From first dosing of study treatment through end of study (Week 84)

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18.1
--------------------	------

### Reporting groups

Reporting group title	BIIB033 3 mg/kg

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 December 2012	The primary reasons for the first global amendment (Version 2), dated 19 December 2012, were to change the information for the contact research organization associated with this study, change the use of the Avonex Prefilled Syringe to only Weeks 0 to 3, add the use of the Avonex Pen for the weeks after Week 3, make it mandatory that subjects titrate Avonex in Month 1 using the Avostartgrip Titration Kit and Prefilled Syringes, and define the DSRC and its members.
10 March 2015	The primary reason for the second global amendment (Version 3), dated 10 March 2015, was to include Avonex assignment during the 3-month safety Follow-Up Period (Weeks 72 to 84).
18 August 2015	The primary reason for the third global amendment (Version 4) was to omit the interim analysis. Additionally, the following 4 MRI endpoints for pre-existing brain lesions were made optional and ultimately were not measured in this study: <ul style="list-style-type: none"><li>- Change in magnetization transfer ratio (MTR) from Baseline for abnormal T1 volume.</li><li>- Change in MTR from Baseline for abnormal T2 volume not associated with T1 hypointensity.</li><li>- Change in diffusion tensor imaging (DTI) from Baseline for abnormal T1 volume.</li><li>- Change in DTI from Baseline for abnormal T2 volume not associated with T1 hypointensity.</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
