

## Clinical trial results:

### Radium-223 Dichloride (Alpharadin) in Castration-Resistant (Hormone-Refractory) Prostate Cancer Patients with Bone Metastasis

#### Summary

EudraCT number	2012-000075-16
Trial protocol	SE DE NO FI BE ES CZ IE GB IT DK NL AT
Global end of trial date	28 February 2016

#### Results information

Result version number	v1 (current)
This version publication date	01 March 2017
First version publication date	01 March 2017

#### Trial information

##### Trial identification

Sponsor protocol code	BAY88-8223/16216
-----------------------	------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01618370
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Bayer AG
Sponsor organisation address	Kaiser-Wilhelm-Allee, D-51368 Leverkusen, Germany,
Public contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com
Scientific contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 February 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objectives of the study were to:

- assess the acute and long-term safety of radium-223 dichloride
- assess the overall survival of this subject population.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 July 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Netherlands: 16
Country: Number of subjects enrolled	Spain: 90
Country: Number of subjects enrolled	Sweden: 95
Country: Number of subjects enrolled	United Kingdom: 31
Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Finland: 38
Country: Number of subjects enrolled	Germany: 124
Country: Number of subjects enrolled	Ireland: 26
Country: Number of subjects enrolled	Italy: 48
Country: Number of subjects enrolled	Russian Federation: 12
Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	Switzerland: 48
Country: Number of subjects enrolled	Israel: 84
Country: Number of subjects enrolled	Norway: 54

Worldwide total number of subjects	708
EEA total number of subjects	543

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	138
From 65 to 84 years	522
85 years and over	48

## Subject disposition

### Recruitment

Recruitment details:

Study was conducted at 115 study centers in 15 countries, between 22 July 2012 (first subject first visit) and 28 February 2016 (last subject last visit).

### Pre-assignment

Screening details:

Overall, 852 subjects were screened. Of these, 143 subjects failed screening and one subject did not receive any study drug, remaining 708 subjects were allocated to treatment.

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Radium-223 dichloride (Xofigo; BAY88-8223) 50 kBq/kg
-----------	--

Arm description:

Subjects received a slow bolus intravenous (iv) injection of Radium-223 dichloride (Xofigo; BAY88-8223), at a dose of 50 kilobecquerel per kilogram (kBq/kg) body weight, based on National Institute of Standards and Technology (NIST) 2010 standardization, at intervals of every 4 weeks for up to 6 cycles. Follow-up assessments for safety were conducted every 6 months until the subject died or until the program was terminated by the sponsor.

Arm type	Experimental
Investigational medicinal product name	Radium-223 dichloride
Investigational medicinal product code	BAY88-8223
Other name	Xofigo, Alpharadin
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received a slow bolus iv injection of Radium-223 dichloride (Xofigo; BAY88-8223), at a dose of 50 kBq/kg body weight, based on NIST 2010 standardization, at intervals of every 4 weeks for up to 6 cycles.

Number of subjects in period 1	Radium-223 dichloride (Xofigo; BAY88-8223) 50 kBq/kg
Started	708
Completed	411
Not completed	297
Physician decision	4
AE associated with clinical disease progression	110
Disease progression	5
Non-compliant with study procedures	1
Clinical deterioration	5

AE un-associated with clinical disease progression	66
PD radiological progression	3
Consent withdrawn by subject	25
Patient decision	2
Progressive disease (PD)	64
Death	7
PD clinical progression	2
Unspecified	2
Lost to follow-up	1

## Baseline characteristics

### Reporting groups

Reporting group title	Radium-223 dichloride (Xofigo; BAY88-8223) 50 kBq/kg
-----------------------	--

Reporting group description:

Subjects received a slow bolus intravenous (iv) injection of Radium-223 dichloride (Xofigo; BAY88-8223), at a dose of 50 kilobecquerel per kilogram (kBq/kg) body weight, based on National Institute of Standards and Technology (NIST) 2010 standardization, at intervals of every 4 weeks for up to 6 cycles. Follow-up assessments for safety were conducted every 6 months until the subject died or until the program was terminated by the sponsor.

Eastern Co-operative Oncology Group (ECOG)			
--	--	--	--

ECOG PS was measured in a scale from 0 (best) to grade 4 (worst), where 0= Fully active, able to carry on all pre-diseases performance without restriction, 1= Restricted in physically strenuous activity but ambulatory and able to carry out work of a light or sedentary nature, 2= Ambulatory and capable of all self-care but unable to carry out any work activities, up and about more than 50 percent (%) waking hours, 3= Capable of only limited self-care, confined to bed/chair, more than 50% waking hours, and 4= Completely disabled, cannot carry on any self-care, totally confined to bed/chair.

Units: Subjects			
ECOG 0	265	265	
ECOG 1	353	353	
ECOG 2	89	89	
ECOG 3	0	0	
ECOG 4	1	1	

Alkaline phosphatase (ALP) (n=703)			
------------------------------------	--	--	--

Baseline value of total-ALP from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.

Units: Units per liter (U/L)			
median	150		
full range (min-max)	19 to 4236	-	

Alanine aminotransferase (ALT) (n=704)			
--	--	--	--

Baseline value of total-ALT from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.

Units: Units per liter (U/L)			
median	17		
full range (min-max)	4 to 286	-	

Aspartate aminotransferase (AST)			
----------------------------------	--	--	--

(n=703)			
Baseline value of total-AST from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Units per liter (U/L)			
median	25		
full range (min-max)	7 to 379	-	
Basophils (n=575)			
Baseline value of total-basophils count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Giga per liter (G/L)			
median	0.02		
full range (min-max)	0 to 0.28	-	
Bilirubin (n=707)			
Baseline value of total-bilirubin count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Milligram per deciliter (mg/dL)			
median	0.43		
full range (min-max)	0.06 to 1.93	-	
Eosinophils (n=576)			
Baseline value of total-eosinophils count from the last value was collected prior to the first injection of study drug in cycle 1.			
Units: Giga per liter (G/L)			
median	0.1		
full range (min-max)	0 to 1.29	-	
Serum Creatinine (n=705)			
Baseline value of total-serum creatinine count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Milligram per deciliter (mg/dL)			
median	0.9		
full range (min-max)	0.49 to 2.2	-	
Hematocrit (n=706)			
Baseline value of total-hematocrit count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Percentage (%)			
median	36.95		
full range (min-max)	25.1 to 51	-	
Hemoglobin (n=708)			
Baseline value of total-hemoglobin count from the last value was collected prior to the first injection of study drug in cycle 1.			
Units: Gram per deciliter (g/dL)			
median	12.2		
full range (min-max)	8.4 to 18	-	
Lymphocytes (n=703)			
Baseline value of total-lymphocytes count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Giga per liter (G/L)			
median	1.3		
full range (min-max)	0.16 to 6	-	
Monocytes (n=576)			
Baseline value of total-monocytes count from the last value collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Giga per liter (G/L)			
median	0.5		
full range (min-max)	0.12 to 1.7	-	
Neutrophils (n=707)			

Baseline value of total-neutrophils count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Giga per liter (G/L)			
median	4.43		
full range (min-max)	1.03 to 11.6	-	
Platelets (n=708)			
Baseline value of total-platelets count from the last value was collected prior to the first injection of study drug in cycle 1.			
Units: Giga per liter (G/L)			
median	234		
full range (min-max)	47 to 664	-	
Prostate specific antigen (PSA) (n=702)			
Baseline value of total-PSA from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Microgram per liter (mcg/L)			
median	143.3		
full range (min-max)	0 to 12150	-	
Erythrocytes (n=705)			
Baseline value of total-erythrocytes count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Tera per liter (T/L)			
median	4.1		
full range (min-max)	2.56 to 5.93	-	
Sodium (n=705)			
Baseline value of total-sodium level from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Millimole per liter (mmol/L)			
median	139		
full range (min-max)	129 to 151	-	
Leukocytes (n=705)			
Baseline value of total-leukocytes count from the last value was collected prior to the first injection of study drug in cycle 1. 'n' signifies evaluable number of subjects.			
Units: Giga per liter (G/L)			
median	6.6		
full range (min-max)	2.8 to 15.8	-	
Brief Pain Inventory (Short Form) (BPI-SF): Worst Pain in Past 24 hours (n=681)			
BPI-SF was a 15-item, self-administered, clinically valid, reliable and responsive measure developed to assess severity of pain related to cancer. The worst pain in last 24 hours was scored by averaging the scores. Scores ranges from 0-10, higher score indicates a higher level of pain/interference. 'n'=evaluable subjects whose last value were collected prior to the first injection of radium-223			
Units: Score on the scale			
arithmetic mean	3.8		
standard deviation	± 2.97	-	
BPI-SF: Pain Severity (n=679)			
BPI-SF was a 15-item, self-administered, clinically valid, reliable and responsive measure developed to assess severity of pain related to cancer. The pain severity score was established by the developers of the instrument and it is the average of the four pain questions (worst pain in last 24 hours, least pain in last 24 hours, average pain, and pain experienced right now). Scores ranges from 0-10, higher score indicates a higher level of pain/interference. 'n'=evaluable subjects whose last value were collected prior to the first injection of radium-223 dichloride.			
Units: Score on the scale			
arithmetic mean	2.65		
standard deviation	± 2.13	-	
BPI-SF: Pain Interference (n=677)			
BPI-SF was a 15-item, self-administered, clinically valid, reliable and responsive measure developed to			

assess severity of pain related to cancer. The pain interference questionnaire were based on the average of seven question designed to assess the degree of pain which interferes common feeling and function (general activity, walking, work, mood, enjoyment of life, relations with others, and sleep). Scores ranges from 0-10, higher score indicates a higher level of pain/interference. 'n'=evaluable subjects whose last value were collected prior to the first injection of radium-223 dichloride.

Units: Score on the scale			
arithmetic mean	2.91		
standard deviation	± 2.58	-	

## End points

### End points reporting groups

Reporting group title	Radium-223 dichloride (Xofigo; BAY88-8223) 50 kBq/kg
-----------------------	--

Reporting group description:

Subjects received a slow bolus intravenous (iv) injection of Radium-223 dichloride (Xofigo; BAY88-8223), at a dose of 50 kilobecquerel per kilogram (kBq/kg) body weight, based on National Institute of Standards and Technology (NIST) 2010 standardization, at intervals of every 4 weeks for up to 6 cycles. Follow-up assessments for safety were conducted every 6 months until the subject died or until the program was terminated by the sponsor.

Subject analysis set title	Safety Analysis Set (SAF)
----------------------------	---------------------------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

SAF (N=708) included all subjects who received at least one dose of the study drug.

### Primary: Overall Survival

End point title	Overall Survival <sup>[1]</sup>
-----------------	---------------------------------

End point description:

Overall survival was defined as time from the start of therapy to death due to any cause. Subjects alive at the time of analysis were censored at the last date known to be alive. Median, percentiles and 95% confidence interval were computed using Kaplan-Meier estimates. '99999' indicates that data were not calculated.

End point type	Primary
----------------	---------

End point timeframe:

From start of study drug administration up to 30 days of last study drug administration

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics were done, no inferential statistical analyses were performed.

### Primary: Number of Subjects With Treatment-Emergent Adverse Events of Grade 3-5 (TEAEs) During Treatment Period

End point title	Number of Subjects With Treatment-Emergent Adverse Events of Grade 3-5 (TEAEs) During Treatment Period <sup>[7]</sup>
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. Treatment emergent AEs were classified in to five grades based upon their severity. On the basis of that grade 3 AEs are severe or medically significant but not immediately life-threatening; which may leads hospitalization or prolongation of hospitalization; disabling; limiting self-care activities of daily living. Grade 4 AEs are life-threatening consequences; urgent intervention. Grade 5 AE is related to Death.

### Primary: Number of Subjects With Treatment Emergent Adverse Events (TEAEs) Treatment Emergent Serious Adverse Events (TESAEs) – During Follow up Period

End point title	Number of Subjects With Treatment Emergent Adverse Events (TEAEs) Treatment Emergent Serious Adverse Events (TESAEs) – During Follow up Period <sup>[45]</sup>
-----------------	--

---

**End point description:**

An adverse event (AE) was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. Treatment-emergent adverse events were defined as adverse events that started or worsened after the start of study drug administration up to 30 days after last drug administration during the follow-up period. An serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged in-patient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly and another med important serious event as judged by the investigator. In the below table data was provided for the follow-up period.

**End point description:**

An adverse event (AE) was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. An serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged in-patient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly and another med important serious event as judged by the investigator. Treatment-emergent adverse events were defined as adverse events that started or worsened after the start of study drug administration up to 30 days after last drug administration during the treatment period.

---

End point type	Primary
----------------	---------

---

**End point timeframe:**

From start of study drug administration up to 30 days of last study drug administration

---

**Notes:**

[47] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics were done, no inferential statistical analyses were performed.

<b>End point values</b>	Radium-223 dichloride (Xofigo; BAY88-8223) 50 kBg/kg			
Subject group type	Reporting group			
Number of subjects analysed	708 <sup>[48]</sup>			
Units: Subjects				
TEAE during Treatment Period	533			
TESAE during Treatment Period	246

## Secondary: Change From Baseline in BPI-SF Questionnaire (Brief Pain Inventory-Short Form) Score

End point title	Change From Baseline in BPI-SF Questionnaire (Brief Pain Inventory-Short Form) Score
-----------------	--

End point description:

BPI-SF was a 15-item, self-administered, clinically valid, reliable and responsive measure developed to assess severity of pain related to cancer. The worst pain in last 24 hours was scored by averaging the scores. The pain severity score was established by the developers of the instrument and it is the average of the four pain questions (worst pain in last 24 hours, least pain in last 24 hours, average pain,

and pain experienced right now). The pain interference questionnaire were based on the average of seven question designed to assess the degree of pain which interferes common feeling and function (general activity, walking, work, mood, enjoyment of life, relations with others, and sleep). Scores ranges from 0-10, higher score indicates a higher level of pain/interference. In the below table 'n'=evaluable subjects whose last value were collected prior to the first injection of radium-223 dichloride; EOT=End of treatment; FU=Follow-up.

End point type	Secondary
End point timeframe:	
From start of study drug administration up to 30 days of last study drug administration	

<b>End point values</b>	Radium-223 dichloride (Xofigo; BAY88-8223) 50 kBq/kg

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse event data were collected From start of study drug administration up to 30 days of last study drug administration

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	17.1
--------------------	------

### Reporting groups

Reporting group title	Radium-223 DiChloride 50 kBq/kg
-----------------------	---------------------------------

Reporting group description:

Subjects received Radium-223 dichloride, at a dose of 50 kBq/kg body weight, based on NIST 2010 standardization, at every 4 weeks up to 6 cycles.

Serious adverse events	Radium-223 DiChloride 50 kBq/kg		
Total subjects affected by serious adverse events			
subjects affected / exposed	246 / 708 (34.75%)		
number of deaths (all causes)	224		
number of deaths resulting from adverse events			
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Basal cell carcinoma			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Bladder transitional cell carcinoma			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Lip and/or oral cavity cancer			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Kaposi's sarcoma classical type			

subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Pancreatic neoplasm			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 1		
Malignant melanoma			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Metastatic pain			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Renal cell carcinoma			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Squamous cell carcinoma of skin			
subjects affected / exposed	1 / 708 (0.14%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Tumour pain

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 October 2012	<ul style="list-style-type: none"><li>-Changed Radium-223 Chloride and Ra223 Cl to Radium-223 Dichloride and radium-223 dichloride respectively, following receipt of the official United States Adopted Name for the product</li><li>-Clarification on the inclusion/exclusion criteria particularly the definition of progressive disease and acceptable diagnostic procedures</li><li>-Inclusion of subjects with history of spinal cord compression who have completely recovered</li><li>-Clarification regarding inclusion of subjects who received prior radiotherapy</li><li>-Inclusion of allowed concomitant treatments, abiraterone and denosumab</li><li>-Provided additional guidance on the collection of safety data</li><li>-Provided additional guidance on safety protection during dose preparation</li><li>-Extension of the screening period from 21 days to 28 days and extension of the timeframe for laboratory assessments from 24 hours to within 72 hours</li><li>-Substituted follow-up visits with phone call follow-ups for deteriorating subjects</li><li>-Addition of long-term follow-up section</li><li>-Clarification regarding AEs that lead to discontinuation</li><li>-Clarification on AEs/SAEs documentation and reporting</li><li>-In addition, administrative changes were made, corrected Bone Pain Index terminology to Brief Pain Inventory, and minor editorial changes and clarifications</li></ul>
02 April 2013	<ul style="list-style-type: none"><li>-Exclusion from the active follow up of subjects who receive further anticancer treatment including radium 223 dichloride administered either within a clinical study or as commercially available drug, and to follow them up for survival status only.</li><li>-Addition of a time window of 3 months for bone scan due to differences in the standard of care in the involved sites</li><li>-Provide clarifications and guidance on:<ul style="list-style-type: none"><li>a. Washout period of 4 weeks applicable for all prior anticancer therapies</li><li>b. Anticancer therapies allowed during the study treatment period</li><li>c. Guidance on when rescreening is allowed</li><li>d. Definition of end of screening period</li></ul></li><li>-Reconfirmation of eligibility</li><li>-Active follow-up Sections were updated to allow collection by means of phone follow-up of long-term safety data in all study subjects, including those who are no longer fit to travel to the investigational site due to deteriorating conditions.</li><li>-In addition, administrative changes were made, including the change of the Sponsor's medical expert as well as minor editorial changes and abbreviations were added.</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Occurrence of "±" in relation with geometric CV is auto-generated. Decimal places were automatically truncated if last decimal equals zero. '99999' indicates that data were not calculated.

Notes:
