Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 August 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 June 2018
Global end of trial reached?	Yes
Global end of trial date	24 June 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

1. To assess the effect of oral UT-15C (oral treprostinil) with PAH-approved oral monotherapy compared to placebo with PAH-approved oral monotherapy on time to first adjudicated clinical worsening (morbidity/mortality) event, as defined by at least 1 of the following events: death (all causes), hospitalization due to worsening PAH, initiation of an inhaled or infused prostacyclin for the treatment of worsening PAH, disease progression, or unsatisfactory long-term clinical response.
2. To assess the effect of oral treprostinil with PAH-approved oral monotherapy compared to placebo combined with PAH-approved oral monotherapy on 6-Minute Walk Distance (6MWD), plasma N-terminal pro-brain natriuretic peptide (NT-proBNP), combined 6MWD/Borg dyspnea score, exercise capacity as assessed by 6MWD, Borg dyspnea score, World Health Organization (WHO) Functional Class (FC), right heart catheterization (RHC) hemodynamics, and safety parameters.

Protection of trial subjects:

Subjects could have voluntarily withdrawn or been withdrawn from the study and/or study drug by the Investigator at any time for reasons including, but not limited to, the following: the subject wished to withdraw from further participation, a serious or life-threatening AE occurred or the Investigator considered that it was necessary to discontinue study drug to protect the safety of the subject, the subject violated the protocol, the subject's behavior was likely to undermine the validity of his/her results, the subject experienced clinical worsening, or the subject became pregnant.

In addition, the dose and frequency of background PAH-approved oral monotherapy were not to be reduced during the study, unless changes were considered medically necessary to protect the safety of the subject.

Background therapy:

All subjects must have been treated with 1 PAH-approved oral monotherapy (eg, sildenafil, tadalafil, bosentan, ambrisentan, macitentan, riociguat, etc) for at least 30 days prior to randomization and stabilized on the same dose for at least 10 days prior to randomization.

Evidence for comparator: -

Actual start date of recruitment	26 July 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	Sweden: 5
Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Germany: 41

Country: Number of subjects enrolled	Greece: 4
Country: Number of subjects enrolled	Italy: 6
Country: Number of subjects enrolled	Argentina: 6
Country: Number of subjects enrolled	Chile: 22
Country: Number of subjects enrolled	Brazil: 53
Country: Number of subjects enrolled	Australia: 26

Country: Number of subjects enrolled	Denmark: 4
Worldwide total number of subjects	690
EEA total number of subjects	89

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	586
From 65 to 84 years	104
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study recruitment was between 26 June 2012 and 24 June 2018. 690 subjects were recruited from the following geographic regions: North America, Asia-Pacific, Europe, South America, and Latin America.

Pre-assignment

Screening details:

Key criteria for inclusion were: 18 to 75 years of age, diagnosis of symptomatic idiopathic or heritable PAH or PAH associated with connective tissue disease, human immunodeficiency virus infection, repaired congenital systemic-to-pulmonary shunt, or appetite suppressant or toxin use.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	UT-15C

Arm description:

Oral treprostinil

Arm type	Experimental
Investigational medicinal product name	UT-15C
Investigational medicinal product code	
Other name	oral treprostinil, treprostinil diolamine
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects remained on their pre-randomization dose of background oral PAH monotherapy for the duration of the study and were administered oral treprostinil 3 times daily (TID) with food. Subjects received oral treprostinil as 0.125, 0.25, 0.5, 1, or 2.5 mg extended-release tablets (maximum dose 12 mg TID).

Arm title	Placebo
------------------	---------

Arm description:

Placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects remained on their pre-randomization dose of background oral PAH monotherapy for the duration of the study and were administered placebo 3 times daily (TID) with food.

Number of subjects in period 1	UT-15C	Placebo
Started	346	344
Completed	346	344

Period 2

Period 2 title	Treatment Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	UT-15C

Arm description:

Oral treprostinil

Arm type	Experimental

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were recorded from the time the informed consent form was signed to the end of the study.

Adverse event reporting additional description:

Pre-defined symptoms of PAH (disease-related events) were only recorded as AEs if the event was either serious; new; or unusual with respect to intensity, frequency, or duration as compared with symptoms in the subject's medical history; or there was a reasonable possibility that the event was caused by the study drug.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 March 2012	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none">• Changed Screening Period to 30 days.• Added/clarified study assessments for subjects who discontinued study drug before Week 24.• Clarification of collection and/or timing for clinical laboratory tests, height, NT-proBNP, and RHC.• Added that AEs extending beyond the final visit were followed for up to 30 days.• Inclusion criterion revised to require PCWP or LVEDP less than or equal to 15 mmHg.• Exclusion criterion clarified that discontinuation of PDE5-I or ERA could be within 30 days prior to Screening.• To continue to collect endpoint data (Week 24 6MWD) on subjects who added second PAH oral therapy, as well as collect safety data in subjects who were presumably declining during the study but did not meet the protocol definition of clinical worsening.• Removed allowance for subjects that have background PAH therapy removed during treatment to continue into the open-label extension study.
04 June 2012	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none">• Definition of clinical worsening disease progression and unsatisfactory clinical response criteria revised.• Clarification of collection and/or timing for clinical laboratory test, contraceptive use, ECGs, NT-proBNP, RHC, visit windows, and telephone contact.• Minimum permitted dosage of tadalafil changed to 20 mg once daily if prescribed per the approved prescribing guidelines.• Updated guidelines and definitions for recording AEs to current practice.• The estimated study duration was revised to indicate an overall estimated study duration of 4 years.• Added language to indicate RHC, ECG, chest X-ray, ventilation perfusion scan, high resolution computerized tomography scan, multigated angiogram, pulmonary angiography, and pulmonary function tests may be performed during Screening if required to satisfy inclusion/exclusion criteria.
05 December 2012	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none">• Dosing was changed from BID to TID and the maximum allowable dose was changed from 15 mg BID to 12 mg TID.• The term Events of Special Interest was removed and replaced by Clinical Worsening Events to ensure consistency in assessing and reporting.• Inclusion criteria revised so that subjects must have received an approved PDE5-I or ERA for at least 30 days, but no more than 1 year before randomization.• New exclusion criterion added for subjects that have chronic renal insufficiency as defined by either a Screening creatinine value >2.5 mg/dL (221 µmol/L) or the requirement for dialysis.• Clarification of collection and/or timing for exercise capacity testing (6MWT and Borg dyspnea score).

10 March 2014	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none"> • Changed PAH background therapy from ERA or PDE5-I to PAH-approved oral monotherapy. Also updated dosing requirements to indicate that dosing of the background therapy must comply with the approved prescribing information for the product. • Clarified the duration of background oral monotherapy for inclusion in the study: initial treatment with any approved PAH therapy occurring no more than 1 year prior to randomization and at a stable dose for a minimum of 10 days prior to randomization. • Dosing of study drug updated so first dose taken at the study site with food (0.125 mg). Dosing was then to continue at 0.125 mg TID with food. Dose escalations could occur no more frequently than every 24 hours. • Allowed temporary use of prostacyclins (28 days or less) for the treatment of clinical worsening and allowed those subjects to transition into the open-label study. • Clarified recording oxygen usage in the CRF when related to the 6MWT. In addition, limitations were placed on use of pulmonary rehabilitation during the study. • Inclusion criteria changed to require RHC within 3 years of Screening, to remove requirement for chest radiograph, and clarify total lung capacity assessments. • Included requirement for subject to complete dosing diary through Week 24. • Method for recording and reporting AEs associated with progression of PAH clarified.
06 January 2015	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none"> • Reduced sample size and number of clinical worsening events based on results from recently completed time to clinical worsening studies. • Removed 1-year time limit on approved PAH background monotherapy. • New exclusion criterion added to reduce the likelihood of enrolling subjects who had clinically relevant left ventricular diastolic dysfunction.
07 October 2015	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none"> • Added optional vital status data collection every 6 months for the duration of the study from subjects who discontinued early from the study.
29 September 2016	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none"> • Increased the sample size/corrected the sample size calculation. • Changed the previous co-primary endpoint of 6MWD at Week 24 to a secondary endpoint. • Added an interim efficacy analysis conducted after 75% of total adjudicated clinical worsening events occurred. • Revised the order of the 3 key secondary endpoints and included a hierarchical approach to analyzing the key secondary endpoints. • Added the secondary endpoint of exercise capacity as assessed by 6MWD measured at each visit up to Week 48 other than Week 24. • Clarified the definition of clinical worsening events and that clinical worsening events were adjudicated. • Addition of an approved pharmacotherapy for PAH. • Clarified RHC could be performed during Screening. • Clarified inclusion/exclusion criterion regarding PAH-approved oral therapies. • Revised when DMC meetings occurred.
09 August 2017	<p>The main changes implemented with this amendment were:</p> <ul style="list-style-type: none"> • Added exploratory objectives for optional evaluation of biomarkers and pharmacogenomics.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
