

## Clinical trial results:

### A Randomized, Double-Blind, Double Dummy, Placebo-Controlled, Parallel Group Study to Evaluate the Efficacy of LF-PB 10 mg, 20 mg, and 30 mg to Treat Lymphorrhea Post Axillary Dissection in Breast Cancer

#### Summary

EudraCT number	2012-000114-10
Trial protocol	IT
Global end of trial date	30 September 2014

#### Results information

Result version number	v1 (current)
This version publication date	09 October 2019
First version publication date	09 October 2019

#### Trial information

##### Trial identification

Sponsor protocol code	LF-PB/11/04
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01754285
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Chemi S.p.A
Sponsor organisation address	Via dei Laboratori, 54, Cinisello Balsamo, Italy, 20092
Public contact	Clinical Trial Transparency Manager, Chemi S.p.A. , Chemi S.p.A., 0039 02 64431, info@chemi.com
Scientific contact	Clinical Trial Transparency Manager, Chemi S.p.A. , Chemi S.p.A., 0039 02 6443 1, info@chemi.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 March 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 May 2014
Global end of trial reached?	Yes
Global end of trial date	30 September 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the effect of the extended release of octreotide (LF-PB) 10 mg, 20 mg, and 30 mg on time to resolution of lymphorrhea

To evaluate safety and tolerability of LF-PB 10 mg, 20 mg, and 30 mg

Protection of trial subjects:

Informed consent was obtained before a patient was enrolled in the study and before the commencement of any protocol-driven activities. The investigator met with the patient and explained the study in sufficient detail to permit an informed decision to participate. The trial was performed in accordance International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) guidelines, the Declaration of Helsinki, and applicable local regulatory requirements and laws.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 114
Worldwide total number of subjects	114
EEA total number of subjects	114

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	82
From 65 to 84 years	32

85 years and over	0
-------------------	---

## Subject disposition

### Recruitment

Recruitment details:

Female patients aged 18 to 80 years inclusive, diagnosed with BC who underwent breast surgery with ALND, body mass index (BMI)  $\geq 18$  kg/m<sup>2</sup>.

### Pre-assignment

Screening details:

Randomization was stratified and balanced by surgery in "conservative surgery + dissection surgery without mammary prosthesis placement (Type I)" versus "dissection surgery with mammary prosthesis placement (Type II)"

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

The study was blinded to patients, investigators, and the sponsor. In order to assure/maintain the blind, a double-dummy technique was used.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	LF-PB 10 mg

Arm description:

LF-PB extended-release of octreotide at dose of 10 mg was given as 2 separate bolus IM injections of 1 mL

Arm type	Experimental
Investigational medicinal product name	LF-PB
Investigational medicinal product code	
Other name	extended-release octreotide
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intramuscular use

Dosage and administration details:

LF-PB was administered as 2 separate bolus IM injections of 1 mL. LF-PB 10 mg: 2 injections = placebo + LF-PB 10 mg.

1 injection of LF-PB 10 mg/mL (obtained by reconstituting an octreotide 10 mg red-capped vial) and 1 injection of placebo for LF-PB 20 mg/mL (obtained by reconstituting a placebo 20 mg brown-capped vial).

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intramuscular use

Dosage and administration details:

Placebo for LF-PB 10 mg octreotide/vial: a vial of lyophilized purified soybean lecithin (10 mg/vial) and hydroxypropyl-beta-cyclodextrin (5 mg/vial).

Placebo was given as 2 separate bolus IM injections of 1 mL.

<b>Arm title</b>	LF-PB 20 mg
------------------	-------------

Arm description:

LF-PB extended-release of octreotide at dose of 20 mg was given as 2 separate bolus IM injections of 1 mL

Arm type	Experimental
----------	--------------

Investigational medicinal product name	LF-PB
Investigational medicinal product code	
Other name	extended-release octreotide
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intramuscular use

**Dosage and administration details:**

LF-PB was administered as 2 separate bolus IM injections of 1 mL. LF-PB 20 mg: 2 injections = placebo + LF-PB 20 mg.

1 injection of placebo for LF-PB 10 mg/mL (obtained by reconstituting a placebo 10 mg red-capped vial) and 1 injection of LF-PB 20 mg/mL (obtained by reconstituting an octreotide 20 mg brown-capped vial).

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intramuscular use

**Dosage and administration details:**

Placebo for LF-PB 20 mg octreotide/vial: a vial of lyophilized purified soybean lecithin (10 mg/vial) and hydroxypropyl-beta-cyclodextrin (5 mg/vial). Placebo was given as 2 separate bolus IM injections of 1 mL.

<b>Arm title</b>	LF-PB 30 mg
------------------	-------------

**Arm description:**

LF-PB extended-release of octreotide at dose of 30 mg was given as 2 separate bolus IM injections of 1 mL.

Arm type	Experimental
Investigational medicinal product name	LF-PB
Investigational medicinal product code	
Other name	extended-release octreotide
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intramuscular use

**Dosage and administration details:**

LF-PB was administered as 2 separate bolus IM injections of 1 mL. LF-PB 30 mg: 2 injections = LF-PB 10 mg + LF-PB 20 mg

1 injection of LF-PB 10 mg/mL (obtained by reconstituting an octreotide 10 mg red-capped vial) and 1 injection of LF-PB 20 mg/mL (obtained by reconstituting an octreotide 20 mg brown-capped vial).

<b>Arm title</b>	Placebo
------------------	---------

**Arm description:**

Placebo for LF-PB 10 mg octreotide/vial and 20 mg octreotide/vial was given as 2 separate bolus IM injections of 1 mL

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intramuscular use

**Dosage and administration details:**

2 injections of placebo given as 1 injection of placebo for LF-PB 10 mg/mL (obtained by reconstituting a placebo 10 mg red-capped vial) and 1 injection of placebo for LF-PB 20 mg/mL (obtained by reconstituting a placebo 20 mg brown-capped vial).

### Subject analysis sets

Subject analysis set title	LF-PB 10 mg - ITT
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The ITT population included all patients who were enrolled and randomized into the treatment groups. The evaluable population included all patients who received the due dose of LF-PB or placebo and had at least 1 post-baseline disease assessment (duration of lymphorrhea or volume of lymph).

Subject analysis set title	LF-PB 20 mg - ITT
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The ITT population included all patients who were enrolled and randomized into the treatment groups. The evaluable population included all patients who received the due dose of LF-PB or placebo and had at least 1 post-baseline disease assessment (duration of lymphorrhea or volume of lymph).

Subject analysis set title	LF-PB 30 mg - ITT
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The ITT population included all patients who were enrolled and randomized into the treatment groups. The evaluable population included all patients who received the due dose of LF-PB or placebo and had at least 1 post-baseline disease assessment (duration of lymphorrhea or volume of lymph).

Subject analysis set title	Placebo - ITT
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The ITT population included all patients who were enrolled and randomized into the treatment groups. The evaluable population included all patients who received the due dose of LF-PB or

placebo and had at least 1 post-baseline disease assessment (duration of lymphorrhea or volume of lymph).

Subject analysis set title	LF-PB 10 mg - PP
----------------------------	------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

The PP population included 112 patients who received the due dose of LF-PB or placebo and had no major protocol violations; the 2 patients omitted from the PP group had major protocol violations.

Subject analysis set title	LF-PB 20 mg - PP

## Primary: Duration of lymphorrhea

End point title	Duration of lymphorrhea
-----------------	-------------------------

End point description:

Duration of lymphorrhea was evaluated by collecting lymph by a drain placed in the axillary fossa during the first 15 days after surgery. At the resolution of lymphorrhea or, in any case, 15 days after surgery, the drain was removed.

On the first day, the drain was emptied and the lymph discarded. From that moment, the pocket drain containing lymph was emptied at the same time of the day into a graduated container. If the volume of lymph collected was  $\geq 50$  mL the patient discarded the lymph. If it was  $< 50$  mL, the patient kept the lymph in the graduated container, covered the container with the provided cap, and stored it in the refrigerator.

If the following day the volume was still  $< 50$  mL, the same procedure was followed and the 2 containers were taken to the site to allow the investigator to confirm the lymphorrhea resolution.

If the volume on the 2nd day was  $\geq 50$  mL, the patient discarded all the lymph and continued the daily collection.

End point type	Primary
----------------	---------

End point timeframe:

Throughout the 12-week study: Day 1 (first day after surgery), Discharge (Visit 2), Visit 3-6 (2 times a week until Day 15 after surgery), Day 22 (Visit 7), Day 29 (Visit 8), Day 56 (Visit 9), Day 84 (Visit 10).

The model included treatment group, surgery type, site (pooled), time, and treatment by time interaction as fixed effects. A continuous covariate for number of removed lymph nodes was also included.

<b>Statistical analysis title</b>	LF-PB 30 mg vs LF-PB 20 mg
Comparison groups	LF-PB 30 mg - ITT v LF-PB 20 mg - ITT
Number of subjects included in analysis	57
Analysis specification	Pre-specified
Analysis type	superiority <sup>[16]</sup>
P-value	= 0.7192
Method	ANCOVA
Confidence interval	
sides	2-sided

Notes:

[16] - For secondary efficacy endpoints, the daily volume of lymph collected was analyzed using a mixed model repeated measures (MMRM) approach. The model included treatment group, surgery type, site (pooled), time, and treatment by time interaction as fixed effects. A continuous covariate for number of removed lymph nodes was also included.

## Secondary: Time to drain removal

End point title	Time to drain removal
-----------------	-----------------------

End point description:

Time to drain removal is defined as: Date of drain removal – surgery date.

In the situation where the patient had the drain removed for another reason other than lymphorrhea resolution and the patient had not reached day 15 at the time of removal, the patient was included in the analysis as not having had the event (drain removal) and was censored at the time the drain was removed.

End point type	Secondary
End point timeframe:	
From Day 0 (day of surgery) to day of drain removal.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 September 2012	<p>The original protocol (Version 1, Dated 02 Jul 2012) was amended on 06 Sep 2012 (Version 2) to include the following changes.</p> <ul style="list-style-type: none"><li>•Following guidance from coordinating EC, the evaluation of the safety and tolerability of LF-PB was updated as primary rather than secondary objective.</li><li>•Exclusion criteria #8 was removed from the protocol as this criteria was appropriate for the oral medication but not for drugs with subcutaneous administration. Furthermore, the diseases already listed in the protocol were the most important.</li><li>•Per coordinating EC's suggestions to include additional information about the safety of study drug, a new section, Background Information, on the safety of LF-PB in clinical trials, available as of September 2012, was included in the protocol.</li><li>•To clarify the procedures that occur prior to and following surgery, Visit 1 was divided into 2 visits: randomization (Day 0) and Visit 1 (Day 1).</li><li>•To obtain additional safety data on LF-PB, liver function tests were updated to include total bilirubin, AST, and ALT.</li><li>•Section 3.3.7, Prior and Concomitant Illnesses and Treatments, was updated to clarify that chemotherapy cannot be initiated until resolution of lymphorrhea per the protocol definition.</li><li>•The protocol was updated to also clarify that the patients should collect lymph from drain throughout the period prior to Day 15 regardless of date of discharge and that the duration of lymphorrhea persists when the volume of lymph is <math>\geq 50</math> mL rather than <math>&gt;50</math> mL.</li></ul>
12 February 2013	<p>The protocol dated 06 Sep 2012 (Version 2) was amended on 12 Feb 2013 (Version 3.0) to include the following major changes:</p> <ul style="list-style-type: none"><li>•The Exclusion Criteria in the synopsis and main body was elaborated as follows for clarity: Criterion 1 - Presence of any of the following conditions:<ol style="list-style-type: none"><li>a. Previous axillary surgery on the same armpit undergoing surgery in this study</li><li>b. Previous chemotherapy or radiotherapy within 5 years from study drug administration</li><li>c. Recurrent BC on the same breast undergoing surgery in this study</li><li>d. Hypothyroidism. If a patient is being administered Euritox/Levothyroxine (or analogues) and levels of T3, T4, and TSH are confirmed to be within the normal ranges at screening, the patient can be enrolled in this study.</li></ol></li><li>Criterion 2 - History of radiotherapy on the breast or armpit undergoing surgery in this study</li><li>Criterion 9 - Corticosteroid treatment on a long-term basis. Acute use of corticosteroids to prevent hypersensitivity reactions before surgery is not considered an exclusion criterion.</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No limitations or caveats to this summary of results.

Notes:
