Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 March 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 March 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

606 participants with Clostridium Difficile Associated Diarrhea (CDAD) participated in this study and received either oral vancomycin or CB-183,315 (surotomycin) in a blinded fashion. Treatment lasted for 10 days and participants were followed up for at least 40 days and a maximum of 100 days. The purpose of this study was to evaluate how well surotomycin treats CDAD as compared to vancomycin.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 May 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 6
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Canada: 122
Country: Number of subjects enrolled	Czech Republic: 28
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Germany: 39
Country: Number of subjects enrolled	Hungary: 35
Country: Number of subjects enrolled	Israel: 12
Country: Number of subjects enrolled	Italy: 9
Country: Number of subjects enrolled	Poland: 15
Country: Number of subjects enrolled	Spain: 43
Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	United States: 267
Worldwide total number of subjects	606
EEA total number of subjects	205

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	307
From 65 to 84 years	253
85 years and over	46

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Males and females aged 18 years or older with diarrhea at risk for CDAD were enrolled in this study

Period 1

Period 1 title	Intent to Treat (ITT) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Surotomylin
------------------	-------------

Arm description:

250 mg Surotomylin over-encapsulated tablet administered orally, twice daily for a daily total dose of 500 mg; and Placebo over-encapsulated tablet administered orally, twice daily for 10 days

Arm type	Experimental
Investigational medicinal product name	Surotomylin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

250 mg Surotomylin over-encapsulated tablet administered orally, twice daily for a daily total dose of 500 mg, for 10 days

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo for Surotomylin over-encapsulated tablet administered orally, twice daily for 10 days

Arm title	Vancomycin
------------------	------------

Arm description:

125 mg Vancomycin over-encapsulated tablet administered orally, four times daily for a daily total dose of 500 mg, for 10 days

Arm type	Active comparator
Investigational medicinal product name	Vancomycin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

125 mg Vancomycin over-encapsulated capsule administered orally, four times daily for a daily total dose of 500 mg, for 10 days

Number of subjects in period 1	Surotomycin	Vancomycin
Started	308	298
Treated	305	286
Completed	261	253
Not completed	47	45
Physician decision	5	-
Consent withdrawn by subject	10	18
Not Treated	3	12
Unspecified	5	6
Lost to follow-up	4	2
Missing	1	-
Adverse event, non-fatal + serious fatal	19	7

Primary: Adjusted percentage of participants with a clinical outcome of cure at the end of treatment (EOT)

End point title	Adjusted percentage of participants with a clinical outcome of cure at the end of treatment (EOT)
End point description: A clinical outcome of cure at EOT was determined by resolution of diarrhea, defined as ≤ 2 loose stools per 24-hour period for at least 2 consecutive days and the lack of need for additional antibiotics to treat the current CDAD episode after completion of the study treatment period. Participants requiring a collection device were considered to have resolution of diarrhea when the volume of stool (over a 24-hour period) was decreased by 75% as compared to baseline or the participant was no longer passing liquid stool. The estimated adjusted percentage was a weighted average across all strata, constructed using Mehrotra-Railkar continuity-corrected minimum risk (MRc) stratum weights. The population analyzed is the Microbiological Modified Intent-To-Treat (mMITT) population consisting of all randomized participants who had a confirmed diagnosis of CDAD regardless of whether they received any amount of study drug, based on the treatment to which they were randomized.	
End point type	Primary
End point timeframe: Up to 13 days	

End point values	Surotomyacin	Vancomycin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	290	280		
Units: Percentage of participants				
number (confidence interval 95%)	79 (73.9 to 83.2)	83.6 (78.8 to 87.4)		

Statistical analyses

Statistical analysis title	Difference in percentage of participants
Statistical analysis description: The 95% confidence interval (CI) were stratified Wilson intervals for the treatment group percentages and a stratified Newcombe interval for the treatment difference, constructed using the MRc stratum weights.	
Comparison groups	Vancomycin v Surotomyacin
Number of subjects included in analysis	570
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	Difference in percentage of participants
Point estimate	-4.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-11
upper limit	1.9

Notes:

[1] - Difference: Surotomyacin minus Vancomycin. For surotomyacin to be non-inferior to vancomycin the lower bound of a 2-sided 95% CI for the difference between treatment groups had to be $\geq -10\%$.

Primary: Percentage of participants with at least one adverse event (AE)

End point title	Percentage of participants with at least one adverse event
End point description: An AE is any untoward medical occurrence in a participant administered a pharmaceutical product that does not necessarily have to have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal product, whether or not related to the medicinal product. AEs may be new events or may be pre-existing conditions that have become aggravated or have worsened in severity or frequency; or may be clinically significant changes from baseline in physical examination, laboratory tests, or other diagnostic investigation (e.g. laboratory results, x-ray findings). The analyzed population consisted of all randomized participants who received any amount of study drug.	
End point type	Primary
End point timeframe: Up to Day 50	

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analyses for this end point were neither planned nor performed.

End point values	Surotomyacin	Vancomycin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	305	286		
Units: Percentage of participants				
number (not applicable)	48.5	55.2		

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of participants with at least one serious adverse event (SAE)

End point title	Percentage of participants with at least one serious adverse event (SAE) ^[3]
-----------------	---

End point description:

A serious adverse event is any adverse experience occurring at any dose that results in any of the following outcomes: either death; a life-threatening experience, referring to a situation in which the participant was at risk of death at the time of the event; it does not refer to an event which might have caused death if it were more severe; requires in-patient hospitalization or prolongation of existing hospitalization; results in persistent or significant disability or incapacity; is a congenital anomaly or birth defect; or is considered to be an important medical event. The analyzed population consisted of all randomized participants who received any amount of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Up to Day 50

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analyses for this end point were neither planned nor performed.

End point values	Surotomyacin	Vancomycin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	305	286		
Units: Percentage of participants				
number (not applicable)	14.4	12.9		

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of participants who discontinued treatment due to an AE

End point title	Percentage of participants who discontinued treatment due to an AE ^[4]
-----------------	---

End point description:

An AE is any untoward medical occurrence in a participant administered a pharmaceutical product that does not necessarily have to have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal product, whether or not related to the medicinal product. AEs may be new events or may be pre-existing conditions that have become aggravated or have worsened in severity or frequency; or may be clinically significant changes from baseline in physical examination, laboratory tests, or other diagnostic investigation (e.g. laboratory results, x-ray

findings). The analyzed population consisted of all randomized participants who received any amount of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Up to Day 13

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analyses for this end point were neither planned nor performed.

End point values	Surotomycin	Vancomycin

Statistical analyses

Statistical analysis title	Surotomycin v Vancomycin
Statistical analysis description: Log-rank test of equality of survival times, stratified by age group (< 75, >= 75 years) and number of CDAD episodes (0, >= 1)	
Comparison groups	Surotomycin v Vancomycin
Number of subjects included in analysis	570
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.832 ^[5]
Method	Log rank test

Notes:

[5] - Significance cut-off = 0.05

Secondary: Adjusted percentage of participants with sustained clinical response at the end of study (Days 40 - 50)

End point title	Adjusted percentage of participants with sustained clinical response at the end of study (Days 40 - 50)
-----------------	---

End point description:

Sustained clinical response at the end of study was achieved by participants who had a clinical outcome of cure at the end of treatment (Days 40-50) and did not experience a recurrence of CDAD, did not die, were not lost to follow-up, and did not have end of study visit prior to Day 40. The estimated adjusted percentage was a weighted average across all strata, constructed using MRc stratum weights. The population analyzed is the mMITT population consisting of all randomized participants who had a confirmed diagnosis of CDAD regardless of whether they received any amount of study drug, based on the treatment to which they were randomized.

End point type	Secondary
----------------	-----------

End point timeframe:

30 days after last dose of study drug: up to Day 50

End point values	Surotomycin	Vancomycin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	290	280		
Units: Percentage of participants				
number (confidence interval 95%)	60.6 (55 to 66)	61.4 (55.9 to 66.8)		

Statistical analyses

Statistical analysis title	Difference in percentage of participants
Statistical analysis description: The 95% CI was stratified Wilson intervals for the treatment group percentages and a stratified Newcombe interval for the treatment difference, constructed using the MRc stratum weights. Stratified by age group (< 75, >= 75 years) and number of CDAD episodes (0, >= 1).	
Comparison groups	Surotomycin v Vancomycin

Number of subjects included in analysis	570
Analysis specification	Pre-specified
Analysis type	superiority ^[6]
Parameter estimate	Difference in percentage of participants
Point estimate	-0.8
Confidence interval	
level	95 %
sides	2-sided
lower limit	-8.8
upper limit	7.1

Notes:

[6] - Difference: Surotomycin - Vancomycin. For surotomycin to be considered superior to vancomycin the lower bound of the 2-sided 95% CI had to be > 0%.

Secondary: Adjusted percentage of participants with sustained clinical response at Day 24

End point title	Adjusted percentage of participants with sustained clinical response at Day 24
-----------------	--

End point description:

Sustained clinical response at Day 24 was defined as participants who had a clinical outcome of cure at Day 24, who did not experience a recurrence of CDAD, did not die, were not lost to follow-up. Only the first failure event was counted per participant. The estimated adjusted percentage was a weighted average across all strata, constructed using MRc stratum weights. The population analyzed was the mMITT population consisting of all randomized participants who had a confirmed diagnosis of CDAD regardless of whether they received any amount of study drug, based on the treatment to which they were randomized.

Comparison groups	Surotomycin v Vancomycin
Number of subjects included in analysis	495
Analysis specification	Pre-specified
Analysis type	superiority ^[12]
Parameter estimate	Difference in percentage of participants
Point estimate	-2.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-7.8
upper limit	3

Notes:

[12] - Difference: Surotomycin - Vancomycin. For surotomycin to be considered superior to vancomycin the lower bound of the 2-sided 95% CI had to be $> 0\%$.

Secondary: Adjusted percentage of participants with a sustained clinical response at the end of study (Days 40 - 50) for infections deemed to be caused by the C. difficile BI/NAP1/027 strain at baseline

End point title	Adjusted percentage of participants with a sustained clinical response at the end of study (Days 40 - 50) for infections deemed to be caused by the C. difficile BI/NAP1/027 strain at baseline
-----------------	---

End point description:

Sustained clinical response at the end of study was achieved by participants who had a clinical outcome of cure at the end of treatment (Days 40-50) and did not experience a recurrence of CDAD, did not die, were not lost to follow-up, and did not have end of study visit prior to Day 40. The estimated adjusted percentage was a weighted average across all strata, constructed using MRc stratum weights. The population analyzed is the mMITT population consisting of all randomized participants who had a confirmed diagnosis of CDAD regardless of whether they received any amount of study drug, based on the treatment to which they were randomized. The Number At Risk is the number of participants with infections deemed to be caused by the C. difficile BI/NAP1/027 strain at baseline.

End point type	Secondary
End point timeframe:	
Up to Day 50	

End point values	Surotomycin	Vancomycin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	59	67		
Units: Percentage of participants				
number (confidence interval 95%)	66.1 (53.6 to 76.7)	51.5 (40.5 to 63.1)		

Statistical analyses

Statistical analysis title	Difference in percentage of participants
Statistical analysis description:	
Analyses were performed separately for each indicated strain or subgroup. Treatment group percentages were stratified by age group (< 75 , ≥ 75) and number of previous CDAD episodes (0, ≥ 1). The 95% CIs were stratified Wilson intervals for the treatment group percentages.	
Comparison groups	Surotomycin v Vancomycin
Number of subjects included in analysis	126
Analysis specification	Pre-specified
Analysis type	superiority ^[13]
Parameter estimate	Difference in percentage of participants
Point estimate	14.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.7
upper limit	30.7

Notes:

[13] - Difference: Surotomycin - Vancomycin. For surotomycin to be considered superior to vancomycin the lower bound of the 2-sided 95% CI had to be $> 0\%$.

Secondary: Adjusted percentage of participants from the Per Protocol 2 population with a sustained clinical response at the end of study (Days 40 - 50)

End point title	Adjusted percentage of participants from the Per Protocol 2 population with a sustained clinical response at the end of study (Days 40 - 50)
End point description:	
Sustained clinical response at the end of study was achieved by participants who had a clinical outcome of cure at the end of treatment (Days 40-50) and did not experience a recurrence of CDAD, did not die, were not lost to follow-up, and did not have end of study visit prior to Day 40. Only the first failure event per participant was counted. The estimated adjusted percentage was a weighted average across all strata, constructed using MRc stratum weights. The population analyzed is the Per Protocol 2 (PP2) population composed of cures and failures from the PP1 population. Additionally, to be included in the PP2 population, PP1 participants who were cured at end of treatment must not have had any protocol deviations which could affect the assessment of recurrence and have had follow-up contact through at least Day 40.	
End point type	Secondary
End point timeframe:	
Up to Day 50	

End point values	Surotomycin	Vancomycin		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	233	227		
Units: Percentage of participants				
number (confidence interval 95%)	70.8 (64.8 to 76.2)	66.5 (60.6 to 72.2)		

Statistical analyses

Statistical analysis title	Difference in percentage of participants
Statistical analysis description:	
Treatment group percentages were stratified by age group (< 75, ≥ 75) and number of previous CDAD episodes (0, ≥ 1). The 95% CIs were stratified Wilson intervals for the treatment group percentages.	
Comparison groups	Surotomycin v Vancomycin
Number of subjects included in analysis	460
Analysis specification	Pre-specified
Analysis type	superiority ^[14]
Parameter estimate	Difference in percentage of participants
Point estimate	4.3
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.2
upper limit	12.7

Notes:

[14] - Difference: Surotomycin - Vancomycin. For surotomycin to be considered superior to vancomycin the lower bound of the 2-sided 95% CI had to be > 0%.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All AEs were collected up to Day 13; only SAEs and drug related AEs were collected thereafter 30 days after end of treatment (up to Day 50)

Adverse event reporting additional description:

All randomized participants who received any amount of study drug.

Assessment type	Systematic

Reporting groups

Reporting group title	Surotomycin
-----------------------	-------------

Reporting group description:

250 mg Surotomycin over-encapsulated tablet administered orally, twice daily for a daily total dose of 500 mg; and Placebo over-encapsulated tablet administered orally, twice daily for 10 days

Reporting group title	Vancomycin
-----------------------	------------

Reporting group description:

125 mg Vancomycin over-encapsulated tablet administered orally, four times daily for a daily total dose of 500 mg, for 10 days

Serious adverse events	Surotomycin	Vancomycin	
Total subjects affected by serious adverse events			
subjects affected / exposed	44 / 305 (14.43%)	37 / 286 (12.94%)

occurrences (all)	13	21	
Gastrointestinal disorders			
Abdominal pain			
subjects affected / exposed	16 / 305 (5.25%)	6 / 286 (2.10%)	
occurrences (all)	20	6	
Nausea			
subjects affected / exposed	20 / 305 (6.56%)	21 / 286 (7.34%)	
occurrences (all)	23	21	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 February 2012	Amendment 1: Addition of objective and endpoint to assess health economic outcomes
15 May 2013	Amendment 2: Addition of other glycopeptides (in addition to vancomycin) and fidaxomixin to list of disallowed concurrent medications. Pharmacokinetic sampling times further defined with tolerance times added. Statistical text revised to provide additional information on general methodology and clarity regarding efficacy endpoints and analyses

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
