

Clinical trial results:

A phase III, randomized, open, controlled, multicenter primary vaccination study to demonstrate the non inferiority of the immunogenicity of meningococcal vaccine GSK134612 given intramuscularly versus Mencevax ACWY given subcutaneously to healthy subjects aged 11 through 17 years

Summary

EudraCT number	2012-000282-20
Trial protocol	Outside EU/EEA
Global end of trial date	10 September 2008

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000429-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 April 2009
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 April 2008
Global end of trial reached?	Yes
Global end of trial date	10 September 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

One month after vaccination:

- To demonstrate the non-inferiority of the vaccine response induced by meningococcal vaccine GSK134612 compared to the licensed Mencevax ACWY measured by serum bactericidal antibodies using baby rabbit complement.
- To demonstrate the non-inferiority of meningococcal vaccine GSK 134612 compared to the licensed Mencevax ACWY in terms of the incidence of any grade 3 systemic symptom within four days after vaccination based on the analysis of pooled safety and reactogenicity data of this present study and study 109067 (MenACWY-TT-035).

Protection of trial subjects:

Vaccines were administered by qualified and trained personnel. Vaccines were administered only to eligible subjects that had no contraindications to any components of the vaccines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 May 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Philippines: 392
Country: Number of subjects enrolled	Taiwan: 235
Country: Number of subjects enrolled	India: 398
Worldwide total number of subjects	1025
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	172
Adolescents (12-17 years)	853
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The target sample size was 1024 enrolled subjects, but a total of 1025 subjects (in all age strata) were actually enrolled and vaccinated in seven study centres in India, Taiwan and the Philippines.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Nimenrix Group

Arm description:

Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Nimenrix (GSK134612) vaccine, administered intramuscularly into the deltoid region of the non-dominant arm.

Arm type	Experimental
Investigational medicinal product name	Nimenrix
Investigational medicinal product code	GSK134612
Other name	Meningococcal serogroups A, C, W-135, Y tetanus toxoid conjugate vaccine
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

1 dose by intramuscular injection in the deltoid region of the non-dominant arm.

Arm title	Mencevax ACWY Group
------------------	---------------------

Arm description:

Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Mencevax ACWY vaccine, administered subcutaneously into the non-dominant upper arm.

Arm type	Active comparator
Investigational medicinal product name	Mencevax ACWY
Investigational medicinal product code	
Other name	Meningococcal serogroups A, C, W-135, Y plain polysaccharide vaccine
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1 dose subcutaneously in the non-dominant upper arm.

Number of subjects in period 1	Nimenrix Group	Mencevax ACWY Group
Started	768	257
Completed	762	254
Not completed	6	3
Consent withdrawn by subject	6	3

Baseline characteristics

Reporting groups

Reporting group title	Nimenrix Group
Reporting group description: Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Nimenrix (GSK134612) vaccine, administered intramuscularly into the deltoid region of the non-dominant arm.	
Reporting group title	Mencevax ACWY Group
Reporting group description: Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Mencevax ACWY vaccine, administered subcutaneously into the non-dominant upper arm.	

Reporting group values	Nimenrix Group	Mencevax ACWY Group	Total
Number of subjects	768	257	1025
Age categorical Units: Subjects			
In utero			0
Preterm newborn infants (gestational age < 37 wks)			0
Newborns (0-27 days)			0
Infants and toddlers (28 days-23 months)			0
Children (2-11 years)			0
Adolescents (12-17 years)			0
Adults (18-64 years)			0
From 65-84 years			0
85 years and over			0
Age continuous			
Healthy males and females aged 11 through 17 years who previously completed routine childhood immunizations to the best of parents'/guardians' knowledge and whose parents/guardians gave written informed consent. No previous vaccination with meningococcal polysaccharide vaccine of serogroups A, C, W-135 and/or Y within the last 5 years, or with meningococcal polysaccharide conjugate vaccine of serogroups A, C, W-135 and/or Y since birth. No previous vaccination with tetanus toxoid within the last month			
Units: years			
arithmetic mean	14.3	14.3	
standard deviation	± 1.97	± 1.97	-
Gender categorical Units: Subjects			
Female	414	135	549
Male	354	122	476

End points

End points reporting groups

Reporting group title	Nimenrix Group
Reporting group description: Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Nimenrix (GSK134612) vaccine, administered intramuscularly into the deltoid region of the non-dominant arm.	
Reporting group title	Mencevax ACWY Group
Reporting group description: Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Mencevax ACWY vaccine, administered subcutaneously into the non-dominant upper arm.	

Primary: Number of subjects with vaccine response to meningococcal antigens

End point title	Number of subjects with vaccine response to meningococcal antigens
End point description: Vaccine response induced by <i>Neisseria meningitidis</i> serogroups A, C, W-135 and Y (MenA, MenC, MenW-135 and menY) as measured by serum bactericidal antibodies using baby rabbit complement (rSBA), was defined as an rSBA titer of at least 1:32 in subjects initially seronegative [rSBA titer below (<) 1:8] and as a 4-fold increase in titer in subjects initially seropositive [rSBA titer greater than or equal to (≥) 1:8]. The analysis was performed on the According-to-Protocol (ATP) cohort for immunogenicity, which included all evaluable subjects for whom immunogenicity data were available.	
End point type	Primary
End point timeframe: One month after vaccination (At Month 1)	

End point values	Nimenrix Group	Mencevax ACWY Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	657	219		
Units: Subjects				
rSBA-MenA (N=553,191,314,108)	472	148		
rSBA-MenC (N=642,211,365,119)	625	204

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects with any and Grade 3 solicited local symptoms

End point title	Number of subjects with any and Grade 3 solicited local symptoms
-----------------	--

End point description:

Solicited local symptoms assessed included pain, redness and swelling. Any= incidence of a particular symptom regardless of intensity. Grade 3 symptoms= symptoms that prevented normal activity. Grade 3 swelling= swelling spreading beyond 50 millimeters (mm).

The analysis was performed on the Total Vaccinated Cohort, which included all vaccinated subjects who had the symptoms sheet filled in.

End point type	Secondary
----------------	-----------

End point timeframe:

During the 4-day (Day 0 to Day 3) period after vaccination

Number of subjects analysed	763	254		
Units: Subjects				
Any Pain	200	68		
Grade 3 Pain	6	0		
Any Redness	94	16		
Grade 3 Redness	2	0		
Any Swelling	71	16		
Grade 3 Swelling	9	0		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects with any, grade 3 and related solicited general symptoms

End point title	Number of subjects with any, grade 3 and related solicited general symptoms
-----------------	---

End point description:

Solicited general symptoms assessed included fatigue, fever [defined as axillary temperature equal to or above (\geq) 37.5 degrees Celsius ($^{\circ}$ C)]. Any= incidence of a particular symptom regardless of intensity or relationship to vaccination. Grade 3= event that prevented normal activities. Grade 3 fever= fever > 39.5 $^{\circ}$ C. Related= general symptom assessed by the investigator as causally related to the study vaccination.

The analysis was performed on the Total Vaccinated Cohort, which included all vaccinated subjects who had the symptoms sheet filled in.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects with any unsolicited adverse events

End point title	Number of subjects with any unsolicited adverse events
-----------------	--

End point description:

An unsolicited AE covers any untoward medical occurrence in a clinical investigation subject temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product and reported in addition to those solicited during the clinical study and any solicited symptom with onset outside the specified period of follow-up for solicited symptoms. Any was defined as the occurrence of any unsolicited AE regardless of intensity grade or relation to vaccination.

The analysis was performed on the Total Vaccinated Cohort, which included all vaccinated subjects.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited local and general adverse events (AEs): during the 4-day (Days 0-3) period after vaccination.
Unsolicited AEs: up to one month after vaccination (Month 1). SAEs and specific AEs: up to study end (Month 6).

Adverse event reporting additional description:

The occurrence of reported AEs (all/related) was not available and is encoded as equal to the number of subjects affected.

Assessment type	Systematic

Reporting groups

Reporting group title	Nimenrix Group
-----------------------	----------------

Reporting group description:

Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Nimenrix (GSK134612) vaccine, administered intramuscularly into the deltoid region of the non-dominant arm.

Reporting group title	Mencevax ACWY Group
-----------------------	---------------------

Reporting group description:

Healthy male and female subjects aged 11 through 17 years, who received 1 dose of Mencevax ACWY vaccine, administered subcutaneously into the non-dominant upper arm.

Serious adverse events	Nimenrix Group	Mencevax ACWY Group	
Total subjects affected by serious adverse events
