

## Clinical trial results:

### A Phase II Randomized Trial of the Combination of Ridaforolimus and Exemestane, Compared to Ridaforolimus, Dalotuzumab and Exemestane in High Proliferation, Estrogen Receptor Positive

#### Summary

EudraCT number	2012-000335-11
Trial protocol	ES SE CZ BE PT DE DK IT
Global end of trial date	15 March 2018

#### Results information

Result version number	v2 (current)
This version publication date	07 May 2020
First version publication date	07 March 2019
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	8669-064
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01605396
WHO universal trial number (UTN)	-
Other trial identifiers	MK-8669-064: Merck Registration Number

Notes:

#### Sponsors

Sponsor organisation name	Merck Sharp & Dohme Corp.
Sponsor organisation address	2000 Galloping Hill Road, Kenilworth, NJ, United States, 07033
Public contact	Clinical Trials Disclosure, Merck Sharp & Dohme Corp., ClinicalTrialsDisclosure@merck.com
Scientific contact	Clinical Trials Disclosure, Merck Sharp & Dohme Corp., ClinicalTrialsDisclosure@merck.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 March 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 March 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The purpose of the study is to evaluate the efficacy of the triplet of ridaforolimus, dalotuzumab and exemestane compared to the combination of ridaforolimus and exemestane in post-menopausal participants with breast cancer. The primary hypothesis of the study is that the triplet of ridaforolimus, dalotuzumab and exemestane will improve progression free survival (PFS) compared to ridaforolimus and exemestane.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 July 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Colombia: 2
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	France: 10
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Korea, Republic of: 15
Country: Number of subjects enrolled	Peru: 2
Country: Number of subjects enrolled	Portugal: 5
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	Sweden: 2
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	United States: 19
Worldwide total number of subjects	80
EEA total number of subjects	36

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	54
From 65 to 84 years	25
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Of 196 screened participants, 80 were randomized to either ridaforolimus plus dalotuzumab plus exemestane or ridaforolimus plus exemestane.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Ridaforolimus + Dalotuzumab + Exemestane

Arm description:

Participants receive ridaforolimus 10 mg orally (PO) every 5 days (QD x 5) plus dalotuzumab 10 mg/kg intravenously (IV) every week (QW) plus exemestane 25 mg PO every day (QD) in 28-day cycles until documented disease progression or unacceptable toxicity.

Arm type	Experimental
Investigational medicinal product name	Ridaforolimus
Investigational medicinal product code	
Other name	MK-8669
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ridaforolimus 10 mg tablet, administered PO at a dose of 10 mg (triplet) or 30 mg (doublet) depending upon randomization, on Days 1-5, 8-12, 15-19, & 22-26 of 28-day cycle.

Investigational medicinal product name	Dalotuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Dalotuzumab 10 mg/kg administered IV weekly on Days 1, 8, 15, and 22 of 28-day cycle.

Investigational medicinal product name	Exemestane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Exemestane 25 mg tablet administered PO QD.

<b>Arm title</b>	Ridaforolimus + Exemestane
------------------	----------------------------

Arm description:

Participants receive ridaforolimus 30 mg PO QD x 5 plus exemestane 25 mg PO QD treatment in 28-day cycles until documented disease progression or unacceptable toxicity.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Ridaforolimus
Investigational medicinal product code	
Other name	MK-8669
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ridaforolimus 10 mg tablet, administered PO at a dose of 10 mg (triplet) or 30 mg (doublet) depending upon randomization, on Days 1-5, 8-12, 15-19, & 22-26 of 28-day cycle.

Investigational medicinal product name	Exemestane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Exemestane 25 mg tablet administered PO QD.

Number of subjects in period 1	Ridaforolimus + Dalotuzumab + Exemestane	Ridaforolimus + Exemestane
Started	40	40
Treated	39	40
Completed	0	0
Not completed	40	40
Transfer Off Study	4	5
Physician decision	2	2
Consent withdrawn by subject	4	2
Adverse event, non-fatal	5	3
Progressive Disease	23	27
Non-Compliance With Study Drug	1	1
Lost to follow-up	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	Ridaforolimus + Dalotuzumab + Exemestane
-----------------------	--

Reporting group description:

Participants receive ridaforolimus 10 mg orally (PO) every 5 days (QD x 5) plus dalotuzumab 10 mg/kg intravenously (IV) every week (QW) plus exemestane 25 mg PO every day (QD) in 28-day cycles until documented disease progression or unacceptable toxicity.

Reporting group title	Ridaforolimus + Exemestane
-----------------------	----------------------------

Reporting group description:

Participants receive ridaforolimus 30 mg PO QD x 5 plus exemestane 25 mg PO QD treatment in 28-day cycles until documented disease progression or unacceptable toxicity.

Reporting group values	Ridaforolimus + Dalotuzumab + Exemestane	Ridaforolimus + Exemestane	Total
Number of subjects	40	40	80
Age categorical Units: Subjects			

Age Continuous Units: Years arithmetic mean standard deviation	60.7 ± 9.0	57.7 ± 11.8	-
Sex: Female, Male Units: Subjects			
Female	40	40	80
Male	0	0	0
Race (NIH/OMB) Units: Subjects			
American Indian or Alaska Native	0	0	0
Asian	9	14	23
Native Hawaiian or Other Pacific Islander	0	0	0
Black or African American	2	1	3
White	26	24	50
More than one race	3	1	4
Unknown or Not Reported	0	0	0
Ethnicity (NIH/OMB) Units: Subjects			
Hispanic or Latino	4	4	8
Not Hispanic or Latino	35	34	69
Unknown or Not Reported	1	2	3

## End points

### End points reporting groups

Reporting group title	Ridaforolimus + Dalotuzumab + Exemestane
Reporting group description: Participants receive ridaforolimus 10 mg orally (PO) every 5 days (QD x 5) plus dalotuzumab 10 mg/kg intravenously (IV) every week (QW) plus exemestane 25 mg PO every day (QD) in 28-day cycles until documented disease progression or unacceptable toxicity.	
Reporting group title	Ridaforolimus + Exemestane
Reporting group description: Participants receive ridaforolimus 30 mg PO QD x 5 plus exemestane 25 mg PO QD treatment in 28-day cycles until documented disease progression or unacceptable toxicity.	

### Primary: Progression-free Survival (PFS) According to Response Criteria in Solid Tumors Version 1.1 (RECIST 1.1) Based on Blinded Independent Central Review (BICR)

End point title	Progression-free Survival (PFS) According to Response Criteria in Solid Tumors Version 1.1 (RECIST 1.1) Based on Blinded Independent Central Review (BICR)
End point description: PFS was defined as the time from randomization to progressive disease, or death, whichever occurs first. Response was assessed according to RECIST 1.1 by BICR. According to RECIST 1.1, progressive disease (PD) was defined as a 20% relative increase in the sum of diameters (SOD) of target lesions, taking as reference the nadir SOD and an absolute increase of >5 mm in the SOD, or the appearance of new lesions. PFS was analysed using the Kaplan-Meier method and median PFS (95% confidence interval [CI]) in weeks was reported for each treatment arm. Per protocol, participants remained on assigned treatment until disease progression. Participants who discontinued study treatment for reasons other than disease progression continued to be assessed by imaging until objective documentation of progression. All participants (including participants who discontinued study treatment) were followed for survival until investigator notification to discontinue. All randomized participants were analysed	
End point type	Primary
End point timeframe: From Day 1 through last post-study efficacy follow-up (up to ~19 months)	

End point values	Ridaforolimus + Dalotuzumab + Exemestane	Ridaforolimus + Exemestane		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	40	40		
Units: Weeks				
median (confidence interval 95%)	23.29 (8.71 to 38.43)	31.86 (16.00 to 39.29)		

### Statistical analyses

Statistical analysis title	PFS: HR Comparison of Treatment
Statistical analysis description: Hazard ratio (HR) and p-value for treatment difference based on Cox regression model with Efron tie handling for treatment comparison (Ridaforolimus + Dalotuzumab + Exemestane arm versus	

Ridaforolimus + Exemestane arm).

Comparison groups	Ridaforolimus + Dalotuzumab + Exemestane v Ridaforolimus + Exemestane
Number of subjects included in analysis	80
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.565
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.18
Confidence interval	
level	Other: 80 %
sides	2-sided
lower limit	0.81
upper limit	1.72

### Secondary: Percent Change from Baseline in Sum of Target Lesion Diameters at Week 16

End point title	Percent Change from Baseline in Sum of Target Lesion Diameters at Week 16
-----------------	---

End point description:

The percent change from baseline to Week 16 in the sum of target lesion diameters as determined by anatomic imaging was defined as the line length (i.e., diameter) for each target lesion identified at baseline summed across all lesions at baseline, and separately at each post-baseline time point. The primary analysis was conducted using a constrained longitudinal data analysis (cLDA) method and target lesion measurements according to the BICR. Percent change from baseline in sum of target lesion diameters at Week 16 was reported for each treatment arm. All randomized participants with available Week 16 target lesion measurements were analyzed.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 16

End point values	Ridaforolimus + Dalotuzumab + Exemestane	Ridaforolimus + Exemestane		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	32		
Units: percent change				
arithmetic mean (standard deviation)	-19.3 (± 20.4)	-10.7 (± 28.5)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Percentage of Participants with Objective Response (Objective Response Rate [ORR]) According to Response Criteria in Solid Tumors Version 1.1 (RECIST 1.1) Based on Blinded Independent Central Review (BICR).

End point title	Percentage of Participants with Objective Response (Objective Response Rate [ORR]) According to Response Criteria in Solid Tumors Version 1.1 (RECIST 1.1) Based on Blinded Independent Central Review (BICR).
End point description:	
<p>ORR was defined as the percentage of participants whose best response was complete response (CR; disappearance of all non-nodal target lesions and any pathological lymph nodes must have become normal) or partial response (PR; at least a 30% decrease in the SOD of target lesions, taking as reference the baseline SOD) according to RECIST 1.1 and based on BICR. ORR was reported for each treatment arm. Per protocol, participants remained on assigned treatment until disease progression. Participants who discontinued study treatment for reasons other than disease progression continued to be assessed by imaging until objective documentation of progression. All randomized participants were analysed.</p>	
End point type	Secondary
End point timeframe:	
From Day 1 through last post-study efficacy follow-up (up to ~19 months)	

<b>End point values</b>	Ridaforolimus + Dalotuzumab + Exemestane	Ridaforolimus + Exemestane		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	40	40		
Units: Percentage of Participants				
number (confidence interval 95%)	15.0 (5.7 to 29.8)	25.0 (12.7 to 41.2)		

## Statistical analyses

<b>Statistical analysis title</b>	ORR: Difference in Response Rates
Statistical analysis description:	
<p>Miettinen and Nurminen's method was used to compare ORR between the two treatment arms (Ridaforolimus + Dalotuzumab + Exemestane arm versus Ridaforolimus + Exemestane arm), and to calculate a p-value and 95% confidence interval (CI) for the difference in response rates.</p>	
Comparison groups	Ridaforolimus + Dalotuzumab + Exemestane v Ridaforolimus + Exemestane
Number of subjects included in analysis	80
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.267
Method	Miettinen and Nurminen's Method
Parameter estimate	Difference of Percentages
Point estimate	-10
Confidence interval	
level	95 %
sides	2-sided
lower limit	-27.8
upper limit	8

## Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
-----------------	-----------------------

End point description:

OS was defined as the time from randomization to death due to any cause. Participants without documented death at the time of analysis were censored at the date last known to be alive. OS was analysed using the Kaplan-Meier method and median OS (95% confidence interval [CI]) in weeks was reported for each treatment arm. Per protocol, all participants (including participants who discontinued study treatment) were followed for survival until investigator notification to discontinue. All randomized participants were analysed. A value of 9999 indicates that median OS (95% CI) could not be calculated due to an insufficient number of deaths on study (i.e. median OS was not reached).

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1 through last post-study efficacy follow-up (up to ~19 months)

End point values	Ridaforolimus + Dalotuzumab + Exemestane	Ridaforolimus + Exemestane		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	40	40		
Units: Weeks				
median (confidence interval 95%)	9999 (9999 to 9999)	9999 (60.6 to 9999)		

## Statistical analyses

Statistical analysis title	OS: HR Comparison of Treatment
----------------------------	--------------------------------

Statistical analysis description:

HR and p-value for treatment difference based on Cox regression model with Efron tie handling for treatment comparison (Ridaforolimus + Dalotuzumab + Exemestane arm versus Ridaforolimus + Exemestane arm).

Comparison groups	Ridaforolimus + Dalotuzumab + Exemestane v Ridaforolimus + Exemestane
Number of subjects included in analysis	80
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.562
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.38
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.46
upper limit	4.13

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From Day 1 through Post Treatment visit at 4 weeks after last dose of treatment (up to ~17 months)

Adverse event reporting additional description:

All randomized participants who received at least one dose of study treatment. For nine participants who continued to receive treatment under compassionate use after database lock, safety data was not included in any study database but was reported to global safety.

Assessment type	Systematic

Investigations			

Alanine aminotransferase increased subjects affected / exposed occurrences (all)	3 / 39 (7.69%) 3	3 / 40 (7.50%) 3	
Aspartate aminotransferase increased subjects affected / exposed occurrences (all)	6 / 39 (15.38%) 9	3 / 40 (7.50%) 3	
Blood cholesterol increased subjects affected / exposed occurrences (all)	2 / 39 (5.13%) 2	4 / 40 (10.00%) 5	
Neutrophil count decreased subjects affected / exposed occurrences (all)	1 / 39 (2.56%) 1	3 / 40 (7.50%) 3	
Platelet count decreased subjects affected / exposed occurrences (all)	1 / 39 (2.56%) 1	5 / 40 (12.50%) 5	
Weight decreased subjects affected / exposed occurrences (all)	3 / 39 (7.69%) 3	6 / 40 (15.00%) 6	
White blood cell count decreased subjects affected / exposed occurrences (all)	0 / 39 (0.00%) 0	3 / 40 (7.50%) 3	
Nervous system disorders			
Dizziness subjects affected / exposed occurrences (all)	1 / 39 (2.56%) 1	6 / 40 (15.00%) 7	
Dysgeusia subjects affected / exposed occurrences (all)	14 / 39 (35.90%) 16	6 / 40 (15.00%) 6	
Headache subjects affected / exposed occurrences (all)	6 / 39 (15.38%) 6	13 / 40 (32.50%) 18	
Neuropathy peripheral subjects affected / exposed occurrences (all)	2 / 39 (5.13%) 2	1 / 40 (2.50%) 1	
Tremor			

subjects affected / exposed occurrences (all)	2 / 39 (5.13%) 2	1 / 40 (2.50%) 1	
Blood and lymphatic system disorders			
Anaemia			
subjects affected / exposed	6 / 39 (15.38%)	9 / 40 (22.50%)	
occurrences (all)	8	11	
Leukopenia			
subjects affected / exposed	1 / 39 (2.56%)	3 / 40 (7.50%)	
occurrences (all)	1	5	
Neutropenia			
subjects affected / exposed	3 / 39 (7.69%)	3 / 40 (7.50%)	
occurrences (all)	4	6	
Thrombocytopenia			
subjects affected / exposed	1 / 39 (2.56%)	3 / 40 (7.50%)	
occurrences (all)	1	4	
Gastrointestinal disorders			
Abdominal pain			
subjects affected / exposed	6 / 39 (15.38%)	4 / 40 (10.00%)	
occurrences (all)	7	7	
Abdominal pain upper			
subjects affected / exposed	4 / 39 (10.26%)	2 / 40 (5.00%)	
occurrences (all)	4	2	
Constipation

Herpes zoster			
subjects affected / exposed	0 / 39 (0.00%)	3 / 40 (7.50%)	
occurrences (all)	0	3	
Nasopharyngitis			
subjects affected / exposed	3 / 39 (7.69%)	3 / 40 (7.50%)	
occurrences (all)	4	5	
Upper respiratory tract infection			
subjects affected / exposed	1 / 39 (2.56%)	6 / 40 (15.00%)	
occurrences (all)	2	6	
Metabolism and nutrition disorders			
Decreased appetite			
subjects affected / exposed	15 / 39 (38.46%)	11 / 40 (27.50%)	
occurrences (all)	16	13	
Hypercholesterolaemia			
subjects affected / exposed	0 / 39 (0.00%)	3 / 40 (7.50%)	
occurrences (all)	0	3	
Hyperglycaemia			
subjects affected / exposed	11 / 39 (28.21%)	10 / 40 (25.00%)	
occurrences (all)	14	20	
Hypertriglyceridaemia			
subjects affected / exposed	0 / 39 (0.00%)	3 / 40 (7.50%)	
occurrences (all)	0	3	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 April 2013	Global Amendment 3 (AM3) reduced the sample size of the protocol from 150 participants to approximately 84 participants, updated the safety analysis, and removed the interim efficacy analysis.
05 August 2014	Global Amendment 4 (AM4) ended further efficacy measurements on study, revised safety monitoring to include only serious adverse events, and ended survival follow-up on study as a result of study objectives having been met. Participants receiving study medication could continue to be treated at the discretion of the investigator until disease progression or unacceptable toxicity, subject to availability of study medications and not to exceed 2-3 years.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
