

## Clinical trial results:

### A Multicenter, Randomized, Double-Blind, Placebo-Controlled Exploratory Study to Assess the Effect of Treatment With Prolonged-Release Fampridine (BII041) 10 mg Twice Daily on Walking Ability and Balance in Subjects with Multiple Sclerosis (MOBILE)

#### Summary

EudraCT number	2012-000368-90
Trial protocol	BE GB NL IT
Global end of trial date	08 August 2013

#### Results information

Result version number	v1 (current)
This version publication date	04 February 2016
First version publication date	06 August 2015

#### Trial information

##### Trial identification

Sponsor protocol code	218MS205

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	08 August 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 August 2013
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

The objectives of this study were as follows:

-to assess the effect of prolonged-release fampridine over 24 weeks on the following parameters to explore endpoints for the Phase 3 study: self-assessed walking disability, dynamic and static balance, subjective impression of well-being, and subjects' global impression of change in walking

-to evaluate the safety and tolerability of prolonged-release fampridine

Protection of trial subjects:

Written informed consent was obtained from each subject prior to evaluations being performed for eligibility. Subjects were given adequate time to review the information in the informed consent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study. Through the informed consent process each subject was made aware of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 August 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Netherlands: 17
Country: Number of subjects enrolled	Sweden: 19
Country: Number of subjects enrolled	United Kingdom: 18
Country: Number of subjects enrolled	Belgium: 20
Country: Number of subjects enrolled	Italy: 31
Country: Number of subjects enrolled	Canada: 27
Worldwide total number of subjects	132
EEA total number of subjects	105

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	126
From 65 to 84 years	6
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Recruitment/enrollment was at a single investigational site in The Netherlands.

### Pre-assignment

Screening details:

This study included a 14-day screening period.

### Period 1

Period 1 title	Double-blind period + 2-week Follow-up (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

All subjects and study staff, including the Neurologist, were blinded to the subject treatment assignments.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Placebo tablet twice daily (BID)

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Study treatment was to be dispensed by a pharmacist or appropriately qualified staff, and only to subjects enrolled in this study. Staff were to refer to the Directions for Handling and Administration for specific instructions about handling, preparation, administration, and disposal of study treatment.

<b>Arm title</b>	Fampridine 10 mg BID
------------------	----------------------

Arm description:

Prolonged-release fampridine 10 mg tablet BID

Arm type	Experimental
Investigational medicinal product name	fampridine
Investigational medicinal product code	BIIB041
Other name	Fampyra, fampridine-PR
Pharmaceutical forms	Prolonged-release tablet
Routes of administration	Oral use

Dosage and administration details:

Study treatment was to be dispensed by a pharmacist or appropriately qualified staff, and only to subjects enrolled in this study. Staff were to refer to the Directions for Handling and Administration for specific instructions about handling, preparation, administration, and disposal of study treatment.

<b>Number of subjects in period 1</b>	Placebo	Fampridine 10 mg BID
Started	64	68
Completed	51	56
Not completed	13	12
Consent withdrawn by subject	1	2
Not specified	6	3
Adverse event	5	6
Lack of efficacy	1	1

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Placebo tablet twice daily (BID)	
Reporting group title	Fampridine 10 mg BID
Reporting group description: Prolonged-release fampridine 10 mg tablet BID	

### Primary: Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Multiple Sclerosis Walking Scale-12 (MSWS-12)

End point title	Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Multiple Sclerosis Walking Scale-12 (MSWS-12)
End point description: The MSWS-12 is a 12-item questionnaire that asks subjects to rate limitations of their mobility due to multiple sclerosis (MS) during the preceding 2 weeks on a 5-point scale (from 1= not at all to 5= extremely). The higher the score, the greater the degree of limitation in walking caused by MS. A negative change indicates an improvement in walking. For each subject, the mean change from baseline to on-treatment was calculated. As the distribution of between-subject changes from baseline were not normally distributed, the median change from baseline and corresponding 95% confidence interval (CI) were calculated for each treatment group. Treatment groups were compared using median differences and corresponding 95% CI, which were calculated using non-parametric methods. Missing data were imputed by last observation carried forward (LOCF) method. Intention to treat (ITT) population: all treated subjects.	
End point type	Primary
End point timeframe: Baseline (mean of Screening and Day 1 visits) up to Week 24 (mean of Weeks 2, 4, 8, 12, 16, 20 and 24 [or early termination] visits)	

End point values	Placebo	Fampridine 10 mg BID		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	64	68		
Units: units on a scale				
median (confidence interval 95%)	-2.89 (-5.36 to 1.04)	-6.92 (-11.61 to -1.64)		

### Statistical analyses

Statistical analysis title	Estimate of median difference
Statistical analysis description: Estimate of median difference: fampridine minus placebo. Median difference and corresponding non-parametric 95% CI determined from all possible differences between the two treatment groups.	
Comparison groups	Placebo v Fampridine 10 mg BID

Number of subjects included in analysis	132
Analysis specification	Pre-specified
Analysis type	superiority
Parameter estimate	Median difference (net)
Point estimate	-3.27
Confidence interval	
level	95 %
sides	2-sided
lower limit	-7.59
upper limit	1.19

### Primary: Percentage Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Timed Up and Go (TUG)

End point title	Percentage Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Timed Up and Go (TUG)
-----------------	---

#### End point description:

TUG was presented using speed in meters per second (m/s), derived by dividing 6 meters by the time (in seconds) required to complete the walk. At each study visit, there were 2 trials of the TUG; the speed for any particular study visit was calculated as the average of the speeds for trial 1 and trial 2. If either trial was missing, then the speed for that visit was the speed from the completed trial. For each subject, the mean change from baseline to on-treatment was calculated. As the distribution of between-subject changes from baseline were not normally distributed, the median change from baseline and corresponding 95% confidence interval were calculated for each treatment group. Treatment groups were compared using median differences and corresponding 95% CI, which were calculated using non-parametric methods. Missing data were imputed by LOCF method. ITT population: all treated subjects.

End point type	Primary
----------------	---------

#### End point timeframe:

Baseline (mean of Screening and Day 1 visits) up to Week 24 (mean of Weeks 2, 4, 8, 12, 16, 20 and 24 [or early termination] visits)

End point values	Placebo	Fampridine 10 mg BID		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	63 <sup>[1]</sup>	68		
Units: percentage change				
median (confidence interval 95%)	3.49 (-2.81 to 9.63)	12.26 (7.58 to 19.35)		

#### Notes:

[1] - subjects in the ITT population with data available at baseline and on-treatment

### Statistical analyses

Statistical analysis title	Estimate of median difference
----------------------------	-------------------------------

#### Statistical analysis description:

Estimate of median difference: fampridine minus placebo. Median difference and corresponding non-parametric 95% CI determined from all possible differences between the two treatment groups.

### Primary: Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Berg Balance Scale (BBS)

End point title	Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Berg Balance Scale (BBS)
-----------------	---

#### End point description:

The BBS test comprises 14 balance-related tasks scored from 0 (unable to perform) to 4 (able to perform independently). The BBS is the sum of scores across these tasks and ranges from 0 (poor balance) to 56 (good balance). A positive change on the BBS indicates an improvement in balance. For each subject, the mean change from baseline to on-treatment was calculated. As the distribution of between-subject changes from baseline were not normally distributed, the median change from baseline and corresponding 95% CI were calculated for each treatment group. Treatment groups were compared using median differences and corresponding 95% CI, which were calculated using non-parametric methods. Missing data were imputed by LOCF method. ITT population: all treated subjects.

End point type	Primary
----------------	---------

#### End point timeframe:

Baseline (mean of Screening and Day 1 visits) up to Week 24 (Weeks 2, 4, 8, 12, 16, 20 and 24 [or early termination] visits)

End point values	Placebo	Fampridine 10 mg BID		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	63 <sup>[2]</sup>	68		
Units: units on a scale				
median (confidence interval 95%)	1.71 (0.57 to 2.93)	2.93 (2.14 to 4.14)		

Notes:

lower limit	0
upper limit	2.93

### Primary: Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Multiple Sclerosis Impact Scale-29 (MSIS-29) Physical Impact Score

End point title	Change From Baseline to Mean On-treatment (Weeks 2 to 24) on the Multiple Sclerosis Impact Scale-29 (MSIS-29) Physical Impact Score
-----------------	---

#### End point description:

MSIS-29 is a subject-completed questionnaire comprising 29 questions measuring the physical (questions 1 to 20) and psychological (questions 21 to 29) impact of MS. For a particular visit, the MSIS-29 physical subscale score was calculated by summing the 20 items and transforming to a scale with a range of 0 (no impact of MS) to 100 (extreme impact of MS). A negative change indicates an improvement in function. For each subject, the mean change from baseline to on-treatment was calculated. As the distribution of between-subject changes from baseline were not normally distributed, the median change from baseline and corresponding 95% CI were calculated for each treatment group. Treatment groups were compared using median differences and corresponding 95% CI, which were calculated using non-parametric methods. Missing data were imputed by LOCF method. ITT population: all treated subjects.

End point type	Primary
----------------	---------

#### End point timeframe:

Baseline (mean of Screening and Day 1 visits) up to Week 24 (mean of Weeks 2, 4, 8, 12, 16, 20 and 24 [or early termination] visits)

End point values	Placebo	Fampridine 10 mg BID		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	64	68		
Units: units on a scale				
median (confidence interval 95%)	-2.19 (-5.27 to 1.25)	-4.96 (-10 to -1.07)		

### Statistical analyses

**Primary: Change from Baseline to Mean On-treatment (Weeks 4 to 24) in EuroQoL Descriptive System of Health-related Quality of Life States Consisting of 5 Dimensions (EQ-5D) Visual Analogue Scale (VAS)**

End point title	Change from Baseline to Mean On-treatment (Weeks 4 to 24) in EuroQoL Descriptive System of Health-related Quality of Life States Consisting of 5 Dimensions (EQ-5D) Visual Analogue Scale (VAS)
-----------------	---

End point description:

The EQ-5D is a generic quality of life instrument that comprises 5 questions and a VAS. The VAS ranges from 0 (worst imagined health state) to 100 (best imagined health state). A positive change indicates an improvement in health state. An analysis of covariance (ANCOVA) with adjustment for baseline values was used to calculate least squares means and corresponding 95% CI for each treatment group, as well as the least squares mean differences and corresponding 95% CI. No imputation for missing data was performed. ITT population: all treated subjects.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day 1), up to Week 24 (mean of Weeks 4, 8, 12, 16, 20 and 24 [or early termination] visits)

End point values	Placebo	Fampridine 10 mg BID
