#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 October 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 October 2013
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

This study assessed the safety and efficacy of MK-8457 + methotrexate (MTX) in participants with active rheumatoid arthritis (RA) despite MTX therapy. The primary hypothesis was that at least 1 dose of MK-8457 + MTX was superior to placebo + MTX as measured by the proportion of participants who achieved American College of Rheumatology 20 (ACR 20) response after 12 weeks of treatment. Study was terminated early (12 September 2013) based on preliminary analysis of data. The results of this study need to be interpreted with caution given the small sample size (82 participants) resulting from the early termination of the study.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research. The following additional measure defined for this individual study was in place for the protection of trial participants. Participants in all treatment groups in the base study were eligible for early escape at any point after Week 12 if they demonstrated a < 20% improvement in both tender and swollen joint counts. Participants could withdraw from the study or early escape and receive MK-8457 100mg twice daily (BID) in the safety extension portion of the study.

Background therapy:

Participants were treated with methotrexate (MTX) for at least 3 months immediately prior to screening and continued on a stable weekly dose during the study.

Evidence for comparator: -

Actual start date of recruitment	22 May 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	76 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Lithuania: 5
Country: Number of subjects enrolled	United States: 26
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Chile: 2
Country: Number of subjects enrolled	South Africa: 2

Country: Number of subjects enrolled	Japan: 4
Country: Number of subjects enrolled	Korea, Republic of: 8
Country: Number of subjects enrolled	Taiwan: 1
Country: Number of subjects enrolled	Moldova, Republic of: 19
Worldwide total number of subjects	82
EEA total number of subjects	19

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	66
From 65 to 84 years	16
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This trial was conducted at 58 trial centers in the United States, Canada, Chile, Denmark, South Africa, Germany, Hungary, Japan, Lithuania, Moldova, Poland, South Korea, Taiwan, and in the United Kingdom.

### Pre-assignment

Screening details:

One hundred and thirty-one of 213 participants screened for study were not randomized; 124 participants were excluded for not meeting at least one of the inclusion or exclusion criteria. Six participants withdrew from the study and 1 participant was not randomized due to the early termination of the study.

### Period 1

Period 1 title	Base Study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	MK-8457 (100mg BID)

Arm description:

MK-8457 100mg twice daily (BID) for 24 weeks

Arm type	Experimental
Investigational medicinal product name	MK-8457
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

MK-8457 100mg BID for 24 weeks

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Placebo to MK-8457 100mg BID for 24 weeks

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo to MK-8457 100mg BID for 24 weeks

<b>Number of subjects in period 1</b>	MK-8457 (100mg BID)	Placebo
Started	41	41
Completed	20	9
Not completed	21	32
Consent withdrawn by subject	2	1
Study terminated by Sponsor	9	8
Adverse event, non-fatal	4	-
Early Escape into Extension	5	22
Non-compliance with study drug	-	1
Lost to follow-up	1	-

## Period 2

Period 2 title	Safety Extension
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

## Arms

<b>Arm title</b>	MK-8457
------------------	---------

Arm description:

MK-8457 (100mg BID) for up to 76 weeks

Arm type	Experimental
Investigational medicinal product name	MK-8457
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

MK-8457 (100mg) BID for up to 76 weeks

<b>Number of subjects in period 2<sup>[1]</sup></b>	MK-8457
Started	29
Completed	0
Not completed	55
Consent withdrawn by subject	2
Physician decision	2
Study terminated by Sponsor	47

Adverse event, non-fatal	4
Joined	26
Transferred in from other group/arm	26

---

Notes:

[1] - The number of subjects transferring in and out of the arms in the period are not the same. It is expected the net number of transfers in and out of the arms in a period, will be zero.

Justification: The number of participants transferring in and out of the arms in the period are not the same because 27 participants had an early escape from the Base Study and joined the MK-8457 100 mg BID arm in the Safety Extension Study.

## Baseline characteristics

### Reporting groups

Reporting group title	MK-8457 (100mg BID)

Reporting group description: MK-8457 (100mg BID) for up to 76 weeks	

### Primary: Percentage of Participants Achieving an American College of Rheumatology (ACR) 20 Response at Week 12

End point title	Percentage of Participants Achieving an American College of Rheumatology (ACR) 20 Response at Week 12
End point description: ACR responses are numerical measurements of improvement in multiple disease assessment criteria. An ACR 20 response is defined as a $\geq 20\%$ improvement in: 1. Swollen joint count (66 joints) and tender joint count (68 joints) (0 = Absent; 1 = Present) and 2. $\geq 20\%$ improvement in 3 of the following 5 assessments: a. A participant's overall assessment of pain on a visual analog scale (VAS, 100 mm, no pain to extreme pain; b. Patient's Global Assessment of Disease Activity (VAS) participant doing very well (0) to very poor (100); c. Physician's Global Assessment of Disease Activity (VAS); d. Patient's assessment of function as measured by Health Assessment Questionnaire (HAQ). Responses in each functional area are scored from 0, indicating no difficulty, to 3, indicating inability to perform a task in that area.; e. C-Reactive Protein (an inflammatory marker with a normal reference range of less than 0.9 mg/dL.	
End point type	Primary
End point timeframe: Week 12	

End point values	MK-8457 (100mg BID)	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	41 <sup>[1]</sup>	41 <sup>[2]</sup>		
Units: Percentage of subjects				
number (not applicable)	68.29	24.39		

Notes:

[1] - Number of participants who have either completed Week 12 or have discontinued before Week 12.

[2] - Number of participants who have either completed Week 12 or have discontinued before Week 12.

### Statistical analyses

Statistical analysis title	Treatment Difference
Statistical analysis description: Percentage of ACR20 responders at Week 12 treated with MK-8457 minus percentage of ACR20 responders at Week 12 treated with placebo.	
Comparison groups	Placebo v MK-8457 (100mg BID)

Number of subjects included in analysis	82
Analysis specification	Pre-specified
Analysis type	other <sup>[3]</sup>
P-value	< 0.001
Method	Cochran-Mantel-Haenszel
Parameter estimate	Difference of percentages
Point estimate	43.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	24.52
upper limit	63.28

Notes:

[3] - The primary efficacy analysis was based on the Full Analysis Set (FAS) population using the Cochran-Mantel-Haenszel (CMH) method stratified by CRP strata. A last observation carried forward procedure was used to impute the missing ACR20 components if the participants had data for at least 1 component at Week 12. If participants did not have data for any of the ACR components at Week 12, the participant was considered not to have achieved an ACR20 response.

### Secondary: Change from Baseline in Disease Activity Score (DAS-28) as Measured by Erythrocyte Sedimentation Rate (ESR) At Week 12

End point title	Change from Baseline in Disease Activity Score (DAS-28) as Measured by Erythrocyte Sedimentation Rate (ESR) At Week 12
-----------------	--

End point description:

The DAS28 based on ESR is a continuous parameter based upon a statistically derived index combining tender joints (28 joints), swollen joints (28 joints), (ESR, an inflammatory marker), and Patient's Global Assessment of Disease Activity (GH, on a visual analog scale (VAS) of 100 mm). It is a continuous parameter and is defined as follows:  $DAS\ 28\ (ESR) = 0.56 \times \sqrt{TEN28} + 0.28 \times \sqrt{SW28} + 0.70 \times \ln(ESR) + 0.014 \times GH$ .  $\sqrt{\phantom{x}}$  = square root. TEN28 is 28 joint count for tenderness and SW28 is 28 joint count for swelling. The DAS28 is a scale ranging from 0 to 10 indicating current RA disease activity. Depending upon the DAS28 value, improvement from baseline is No Response ( $\geq 0.6$ ), No response to Moderate Response ( $>0.6 - 1.2$ ), and Moderate to Good Response ( $>1.2$ ).

Parameter estimate	Difference in percentages
Point estimate	9.76
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.67
upper limit	18.84

Notes:

[25] - Based on Cochran-Mantel-Haenszel test stratified by screening CRP level.

## Secondary: Percentage of Participants Achieving DAS-28 CRP Remission at Week 12

End point title	Percentage of Participants Achieving DAS-28 CRP Remission at Week 12
-----------------	--

End point description:

The DAS28 based on CRP is a statistically derived index combining tender joints (28 joints), swollen joints (28 joints), CRP, and GH. The DAS28 is a continuous parameter and is defined as follows:  $DAS28(CRP) = 0.56 \times \text{SQRT}(TEN28) + 0.28 \times \text{SQRT}(SW28) + 0.36 \times \ln(CRP+1) + 0.014 \times GH + 0.96$  where: TEN28 is 28 joint count for tenderness; SW28 is 28 joint count for swelling. SQRT is the square root. DAS28 remission is defined as a DAS28 value of < 2.6 at a visit.

upper limit	22.21

Notes:

[28] - Based on Cochran-Mantel-Haenszel test stratified by screening CRP level.

### Secondary: DAS-28 Area Under the Curve (AUC)

End point title	DAS-28 Area Under the Curve (AUC)
End point description:	
DAS28 area under the disease activity curve (AUC) was calculated from the DAS28 score versus time curve, which provided an assessment of changes in disease activity over time. AUC DAS28 was averaged over study days. The DAS28 AUC was calculated using the trapezoidal rule as the DAS28 multiplied by the duration of the assessment period (in weeks) and was presented as %-weeks. Higher calculated AUC values indicate higher disease activity (worse).	
End point type	Secondary
End point timeframe:	
Up to 12 Weeks	

End point values	MK-8457 (100mg BID)	Placebo

[30] - Due to the early study termination, this endpoint was not evaluated.

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change from Baseline in Tender Joint Count at Week 12

End point title	Change from Baseline in Tender Joint Count at Week 12
End point description:	
Tender Joint Count was examined on 68 joints of the fingers, elbows, hips, knees, ankles, and toes distal for pain in response to pressure or passive motion at the study time points. Joint pain was scored as 0 = Absent; 1 = Present for each joint. Change from baseline in tender joint count was calculated as Tender Joint Count at Week 12 minus Tender Joint Count at Baseline. The overall Tender Joint Count count ranged from 0 to 68. A higher score indicated greater disease severity.	
End point type	Secondary

End point timeframe:  
Baseline and Week 12

End point values	MK-8457 (100mg BID)	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	38 <sup>[31]</sup>	39 <sup>[32]</sup>		
Units: Tender Joint Count				
least squares mean (confidence interval 95%)	-13.53 (-16.73 to -10.34)	-8.78 (-11.96 to -5.6)		

Notes:

[31] - Number of participants with data at both baseline and Week 12.

[32] - Number of participants with data at both baseline and Week 12.

## Statistical analyses

Statistical analysis title	Difference in the Least Squares Mean
----------------------------	--------------------------------------

Statistical analysis description:

Change from baseline in the least squares mean of tender joint count at Week 12 for participants treated with MK-8457 minus change from baseline in the least squares mean of Tender Joint Count at Week 12 for participants treated with placebo. Negative differences are in favor of the MK-8457 treatment group in the comparison.

Comparison groups	Placebo v MK-8457 (100mg BID)
Number of subjects included in analysis	77
Analysis specification	Pre-specified
Analysis type	superiority <sup>[33]</sup>
P-value	= 0.028
Method	Constrained Longitudinal Data Analysis
Parameter estimate	Mean difference (final values)
Point estimate	-4.75
Confidence interval	
level	95 %
sides	2-sided
lower limit	-8.99
upper limit	-0.52

Notes:

[33] - Constrained longitudinal data analysis model includes terms for region, screening inflammatory marker level, time in weeks, and treatment by time. A participant had to have at least one baseline observation or post-baseline observation to be included in the model.

## Secondary: Change from Baseline in Swollen Joint Count at Week 12

End point title	Change from Baseline in Swollen Joint Count at Week 12
-----------------	--

End point description:

Swollen joint count included 66 joints (same joints as for tender joint count except this excluded evaluation of hips) that were assessed for the presence of swelling. Soft tissue swelling was considered to be present if there was palpable or visible evidence of capsular distention considered to be due to either synovial thickening and/or a joint effusion. Bony swelling, nodule formation, and joint deformity were excluded from consideration. A swollen joint was scored as 0 = Absent; 1 = Present for each joint. The overall swollen joint count ranged from 0 to 66. A higher score indicated greater disease severity.

End point type	Secondary

[39] - Constrained longitudinal data analysis model includes terms for region, screening inflammatory marker level, time in weeks, and treatment by time. A participant had to have at least one baseline observation or post-baseline observation to be included in the model. Negative differences are in favor of the MK-8457 treatment group in the comparison.

## Secondary: Change from Baseline in Short Form Health Survey (SF-36) at Week 12

End point title	Change from Baseline in Short Form Health Survey (SF-36) at Week 12
-----------------	---

End point description:

The SF-36 is a health-related quality of life instrument that consists of 8 multi-item scales: limitations in physical functioning due to health problems, limitations in usual role activities due to physical health problems, bodily pain, general mental health (psychological distress and well-being), limitations in usual role activities due to personal or emotional problems, limitations in social functioning due to physical or mental health problems, vitality (energy and fatigue), and general health perception. The concepts measured by the SF-36 are not specific to any age, disease, or treatment group, allowing the comparison of relative burden of disease and relative benefit of different treatments. Each scale is directly transformed into a 0 to 100 scale on the assumption that each question carries equal weight. The lower the score the greater the disability i.e., a score of 0 is equivalent to maximum disability and a score of 100 is equivalent to no disability.

End point type	Secondary

### Secondary: Change from Baseline in the Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) at Week 12

End point title	Change from Baseline in the Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) at Week 12
-----------------	---

End point description:

The Functional Assessment of Chronic Illness Therapy (FACIT-F) is a questionnaire that assesses self-reported tiredness, weakness, and difficulty conducting usual activities due to fatigue. FACIT-F is a 13-item questionnaire. Participants scored each item on a 5-point scale: 0 (Not at all) to 4 (Very much). The sum of all responses resulted in the FACIT-Fatigue score for a total possible score of 0 (worse score) to 52 (better score). The larger the participant's response to the questions, the greater the participants fatigue.

## Secondary: Change from Baseline in the Health Assessment Questionnaire Disability (HAQ) Subscales at Week 12

End point title	Change from Baseline in the Health Assessment Questionnaire Disability (HAQ) Subscales at Week 12
-----------------	---

End point description:

The functional status of the participant was assessed using the Disability Index of the HAQ. This 20-question instrument assesses the degree of difficulty a person has in accomplishing tasks in 8 functional areas (dressing, arising, eating, walking, hygiene, reaching, gripping, and activities of daily living).

Responses in each functional area are scored from 0, indicating no difficulty, to 3, indicating inability to perform a task in that area. The overall score for the Disability Index is the mean of the 8 functional area scores and also ranges from 0 to 3, with a lower score indicating less disability.

## Secondary: ACR20 Response Rate Over Time

End point title	ACR20 Response Rate Over Time
End point description:	Percentage of participants who were ACR20 responders at Week 1, 2, 4, 6, 12, 18, and 24 with ACR responses presented as the numerical measurement of improvement in multiple disease assessment criteria. An ACR 20 response is defined as a $\geq 20\%$ improvement in: 1. Swollen joint count (66 joints) and tender joint count (68 joints) (0 = Absent; 1 = Present) and 2. $\geq 20\%$ improvement in 3 of the following 5 assessments: a. A participant's overall assessment of pain on a visual analog scale (VAS, 100 mm, no pain to extreme pain); b. Patient's Global Assessment of Disease Activity (VAS); c. Physician's Global Assessment of Disease Activity (VAS); d. Patient's assessment of function as measured by Health Assessment Questionnaire (HAQ). Responses in each functional area are scored from 0, no difficulty, to 3, inability to perform a task in that area; e. C-Reactive Protein (an inflammatory marker with a normal reference range of less than 0.9 mg/dL).
End point type	Secondary
End point timeframe:	Baseline, Week 1, Week 2, Week 4, Week 6, Week 12, Week 18, Week 24

End point values	MK-8457 (100mg BID)	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	41 <sup>[64]</sup>	41 <sup>[65]</sup>		
Units: Percentage of Participants				
number (not applicable)				
Week 1	12.2	9.8		
Week 2	51.2	14.6		
Week 4	61	22		
Week 6	63.4	14.6		
Week 12	68.3	24.4		
Week 18	53.7	12.2		
Week 24	48.8	22		

Notes:

[64] - The number of participants in each treatment group at particular weeks.

[65] - The number of participants in each treatment group at particular weeks.

## Statistical analyses

## Secondary: Change from Baseline in the Investigator's Global Assessment of Disease Status/Activity (IGADSA) at Week 12

End point title	Change from Baseline in the Investigator's Global Assessment of Disease Status/Activity (IGADSA) at Week 12
-----------------	---

### End point description:

Investigator's Global Assessment of Disease Status/Activity (IGADSA) is measured using a visual analog scale with scores ranging from 0 to 100mm (VAS; 0mm [best] to 100mm [worst]) with increasing scores indicating how well the participant was doing. A negative value in change from baseline indicates an improvement.

End point type	Secondary
----------------	-----------

### End point timeframe:

Baseline and Week 12

End point values	MK-8457 (100mg BID)	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	38 <sup>[66]</sup>	39 <sup>[67]</sup>		
Units: Scores on a scale				
least squares mean (confidence interval 95%)	-34.21 (-41.8 to -26.63)	-14.73 (-22.23 to -7.23)		

### Notes:

[66] - Number of participants with data at both baseline and Week 12.

[67] - Number of participants with data at both baseline and Week 12.

## Statistical analyses

Statistical analysis title	Treatment Difference
----------------------------	----------------------

### Statistical analysis description:

Change from baseline in IGADA at Week 12 for participants treated with MK-8457 minus change from baseline in IGADA at Week 12 for participants treated with placebo. Negative differences are in favor of the MK-8457 treatment group in the comparison.

Comparison groups	MK-8457 (100mg BID) v Placebo
Number of subjects included in analysis	77
Analysis specification	Pre-specified
Analysis type	other <sup>[68]</sup>
P-value	< 0.001
Method	Constrained Longitudinal Data Analysis
Parameter estimate	Mean difference (final values)
Point estimate	-19.48
Confidence interval	
level	95 %
sides	2-sided
lower limit	-29.69
upper limit	-9.28

### Notes:

[68] - Constrained longitudinal data analysis model includes terms for region, screening inflammatory marker level, time in weeks, and treatment by time. A participant had at least one baseline observation or post-baseline observation to be included in the model.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 104 weeks

Adverse event reporting additional description:

Adverse events were reported for participants treated with MK-8457 100 mg for up to 76 weeks in the Safety Extension.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	16.1
--------------------	------

### Reporting groups

Reporting group title	MK-8457 100 mg (Base Study)
-----------------------	-----------------------------

Reporting group description:

Participants who received at least one dose of MK-8457 100 mg during the Base Study.

Reporting group title	MK-8457 100 mg (Safety Extension)
-----------------------	-----------------------------------

Reporting group description:

Participants who received at least one dose of MK-8457 100 mg during the Safety Extension.

Reporting group title	Placebo (Base Study)
-----------------------	----------------------

Reporting group description:

Participants who received at least one dose of placebo to MK-8457 during the Base Study.

Serious adverse events	MK-8457 100 mg (Base Study)	MK-8457 100 mg (Safety Extension)	Placebo (Base Study)

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 July 2012	Additional blood pressure assessment time points were added to the study; in order to better characterize the effects of MK-8457 on blood pressure in participants with rheumatoid arthritis. Pharmacokinetic sampling time points shifted to coincide with additional blood pressure monitoring timepoints for simplicity.
08 August 2013	The doses of study drug was changed to 100mg BID, 150mg QD, 75mg QD, 25mg QD, and placebo. The time point for the primary endpoint was changed to 12 weeks.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
12 September 2013	Study was terminated early (12 September 2013) based on preliminary analysis of data.	-

Notes:

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The results of this study need to be interpreted with caution given the small sample size (82 participants) resulting from the early termination of the study.

Notes:
