

## Clinical trial results:

### A Phase IV Study to Evaluate Decreased Dose Frequency in Patients with Systemic Juvenile Arthritis (SJIA) who Experience Laboratory Abnormalities During Treatment with Tocilizumab

#### Summary

EudraCT number	2012-000444-10
Trial protocol	GB ES NO DE SE IT
Global end of trial date	09 October 2019

#### Results information

Result version number	v1 (current)
This version publication date	25 April 2020
First version publication date	25 April 2020

#### Trial information

##### Trial identification

Sponsor protocol code	WA28029
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01734382
WHO universal trial number (UTN)	-

Notes:

Sponsor organisation name	F. Hoffmann-La Roche AG
Sponsor organisation address	Grenzacherstrasse 124, Basel, Switzerland, CH-4070
Public contact	F. Hoffmann-La Roche AG, F. Hoffmann-La Roche AG, 41 616878333, global.trial_information@roche.com
Scientific contact	F. Hoffmann-La Roche AG, F. Hoffmann-La Roche AG, 41 616878333, global.trial_information@roche.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 October 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 October 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study was to explore the efficacy of tocilizumab (TCZ) in reduced dosing frequency regimens (every 3 weeks [Q3W] and every 4 weeks [Q4W], as appropriate) using Juvenile Arthritis Disease Activity Score (JADAS)-71, JIA flare, and fever (attributable to sJIA) and to describe the pharmacodynamics, using soluble interleukin-6 receptor (sIL-6R) and C-reactive protein (CRP), and immunogenicity of TCZ in reduced dosing frequency regimens.

Protection of trial subjects:

All participants or their guardians signed informed consent form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 June 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 6
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Israel: 7
Country: Number of subjects enrolled	Mexico: 2
Country: Number of subjects enrolled	Russian Federation: 5
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	United States: 3
Worldwide total number of subjects	35
EEA total number of subjects	12

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	25
Adolescents (12-17 years)	10
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants with systemic juvenile idiopathic arthritis (sJIA) were recruited at study sites in 8 countries. The study consisted of two parts: Part 1 was a 24-week Run-in period and Part 2 was a 52-week Main study.

### Pre-assignment

Screening details:

Part 1 enrolled 19. Patients treated with tocilizumab (TCZ) every other week (Q2W) either during Part 1 or prior to the study, who experienced laboratory abnormalities and which had resolved, were allowed to enroll into Part 2. Part 2 enrolled 22 with 6 from Part 1 and 16 directly enrolled into Part 2.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	Part 1: Tocilizumab (TCZ) Q2W

Arm description:

Participants received tocilizumab intravenous (IV) infusions (12 mg/kg for participants < 30 kg; 8 mg/kg for participants ≥ 30 kg) once every other week (Q2W) up to 24 weeks or until occurrence of a protocol defined laboratory abnormality in Part 1 of the study.

Arm type	Experimental
Investigational medicinal product name	Tocilizumab (TCZ)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

TCZ dosed by body weight (12 mg/kg for participants < 30 kg; 8 mg/kg for participants ≥ 30 kg) by IV infusion Q2W for up to 24 weeks or until they experience a laboratory abnormality of neutropenia, thrombocytopenia, or liver enzyme abnormality as per the protocol criteria.

<b>Arm title</b>	Part 2: TCZ IV 12 mg/kg Q3W/Q4W
------------------	---------------------------------

Arm description:

Participants with weight < 30 kg received tocilizumab IV infusions of 12 mg/kg once every three weeks (Q3W) up to 52 weeks or until occurrence of neutropenia, thrombocytopenia, or liver enzyme abnormality as per protocol criteria. Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 12 mg/kg once every four weeks (Q4W) up to Week 52 in Part 2 of the study.

Arm type	Experimental
Investigational medicinal product name	Tocilizumab (TCZ)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 12 mg/kg Q4W up to 52 weeks.

<b>Arm title</b>	Part 2: TCZ IV 8 mg/kg Q3W/Q4W
------------------	--------------------------------

**Arm description:**

Participants with weight  $\geq 30$  kg received tocilizumab IV infusions of 8 mg/kg Q3W up to 52 weeks or until occurrence of neutropenia, thrombocytopenia, or liver enzyme abnormality as per protocol criteria. Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 8 mg/kg Q4W up to Week 52 in Part 2 of the study.

Arm type	Experimental
Investigational medicinal product name	Tocilizumab (TCZ)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 8 mg/kg Q4W up to 52 weeks.

<b>Number of subjects in period 1</b>	Part 1: Tocilizumab (TCZ) Q2W	Part 2: TCZ IV 12 mg/kg Q3W/Q4W	Part 2: TCZ IV 8 mg/kg Q3W/Q4W
Started	19	7	15
Completed	17	5	8
Not completed	2	2	7
Physician decision	-	-	3
Consent withdrawn by subject	-	-	1
Adverse event, non-fatal	2	-	1
Not Specified	-	-	1
Lack of efficacy	-	1	1
Protocol deviation	-	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	Part 1: Tocilizumab (TCZ) Q2W
Reporting group description:	
Participants received tocilizumab intravenous (IV) infusions (12 mg/kg for participants < 30 kg; 8 mg/kg for participants ≥ 30 kg) once every other week (Q2W) up to 24 weeks or until occurrence of a protocol defined laboratory abnormality in Part 1 of the study.	

Reporting group title	Part 2: TCZ IV 12 mg/kg Q3W/Q4W
Reporting group description:	
Participants with weight < 30 kg received tocilizumab IV infusions of 12 mg/kg once every three weeks (Q3W) up to 52 weeks or until occurrence of neutropenia, thrombocytopenia, or liver enzyme abnormality as per protocol criteria. Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 12 mg/kg once every four weeks (Q4W) up to Week 52 in Part 2 of the study.	

Reporting group title	Part 2: TCZ IV 8 mg/kg Q3W/Q4W
Reporting group description:	
Participants with weight ≥ 30 kg received tocilizumab IV infusions of 8 mg/kg Q3W up to 52 weeks or until occurrence of neutropenia, thrombocytopenia, or liver enzyme abnormality as per protocol criteria. Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 8 mg/kg Q4W up to Week 52 in Part 2 of the study.	

Reporting group values	Part 1: Tocilizumab (TCZ) Q2W	Part 2: TCZ IV 12 mg/kg Q3W/Q4W	Part 2: TCZ IV 8 mg/kg Q3W/Q4W
Number of subjects	19	7	15

### Primary: Juvenile Arthritis Disease Activity Score (JADAS-71) at the End of Part 2 of the Study

End point title	Juvenile Arthritis Disease Activity Score (JADAS-71) at the End of Part 2 of the Study <sup>[1]</sup>
-----------------	---

End point description:

JADAS-71 has 4 components: Physician global assessment of disease activity on visual analog scale (VAS) (range=0-10, 0=arthritis inactive, 10=very poor), patient/parent global assessment of overall well-being on VAS (range=0-10, 0=very well, 10=very poor), normalized erythrocyte sedimentation rate (ESR) (range=0-10, If ESR is ≤20 mm/h, set to 0. If ≥120 mm/h, set to 10 mm/h. If > 20 mm/h and < 120 mm/h, apply formula: [ESR-20 mm/h]/10 mm/h), count of active arthritis (swelling present/pain present and limitation of motion) in 71 selected joints (range=0-71). Total score=sum of 4 component scores, range=0-101. Higher score=more arthritis. Data was collected: Part 2: Q3W Baseline, Weeks 3,6,9,12,24,36,48 and 51; Q4W-Baseline, Weeks 0,4,8,12,24,36 and 40. All TCZ population, participants who received at least 1 dose of study drug. n=participants with data at given timepoint. 9999=Not available; No participant analysed at given timepoint. 99999=SD was not estimable for 1 participant.

End point type	Primary
----------------	---------

End point timeframe:

Part 2: Up to 52 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics were planned to be reported for this endpoint. No formal assessment of treatment group comparability was planned to be performed.

## Statistical analyses

No statistical analyses for this end point

### Primary: Number of Participants With Juvenile Idiopathic Arthritis (JIA) Disease Flare as Determined by JIA Core Variables in Part 2 of the Study

End point title	Number of Participants With Juvenile Idiopathic Arthritis (JIA) Disease Flare as Determined by JIA Core Variables in Part 2 of the Study <sup>[2]</sup>
-----------------	---

End point description:

JIA flare was defined as any 3 of 6 core outcome variables worsening by at least 30% relative to baseline visit of Part 2, with no >1 of remaining variables improving by >30%. For number of joints with active arthritis/limitation of motion a minimum worsening of at least 2 joints had to be present. If physician global assessment (PGA)/parent/patient global assessment were used a minimum worsening of at least 2 units on a scale=0-10 had to be present. For ESR, a worsening of at least 30% was not considered if within normal ranges. The 6 core outcome variables: PGA of disease activity, parent/patient global assessment of overall well-being, number of joints with active arthritis/limitation of movement, ESR (measure of acute phase reaction) and functional ability determined by CHAQ Disability Index. All TCZ population, all participants who received at least one dose of study drug. Number of participants analyzed=participants with data available for analyses.

## Secondary: Number of Participants With at Least One Adverse Event

End point title	Number of Participants With at Least One Adverse Event
-----------------	--

End point description:

An adverse event is any untoward medical occurrence in a subject administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An adverse event can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. Preexisting conditions which worsen during a study are also considered as adverse events. Safety population, all participants who have received at least one dose of study drug and who have at least one post-baseline assessment of safety.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Part 1 - Baseline up to 24 weeks plus 12 weeks of safety follow up; Part 2 - Baseline up to 52 weeks plus 12 weeks of safety follow up

Adverse event reporting additional description:

Safety population, all participants who received at least one dose of study drug and who had at least one post-baseline assessment of safety.

Assessment type	Systematic
-----------------	------------

### Reporting groups

Reporting group title	Part 1: Tocilizumab (TCZ) Q2W
-----------------------	-------------------------------

Reporting group description:

Participants received tocilizumab intravenous (IV) infusions (12 mg/kg for participants < 30 kg; 8 mg/kg for participants ≥ 30 kg) once every other week (Q2W) up to 24 weeks or until occurrence of laboratory abnormalities in Part 1 of the study.

Reporting group title	Part 2: TCZ IV 12 mg/kg Q3W/Q4W
-----------------------	---------------------------------

Reporting group description:

Participants with weight < 30 kg received tocilizumab IV infusions of 12 mg/kg once every three weeks (Q3W) up to 52 weeks or until occurrence of neutropenia, thrombocytopenia, or liver enzyme abnormality as per protocol criteria. Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 12 mg/kg once every four weeks (Q4W) up to Week 52 in Part 2 of the study.

Reporting group title	Part 2: TCZ IV 8 mg/kg Q3W/Q4W
-----------------------	--------------------------------

Reporting group description:

Participants with weight ≥ 30 kg received tocilizumab IV infusions of 8 mg/kg Q3W up to 52 weeks or until occurrence of neutropenia, thrombocytopenia, or liver enzyme abnormality as per protocol criteria. Participants who completed 5 consecutive infusions of Q3W and had a laboratory abnormality of neutropenia, thrombocytopenia or elevated liver enzymes as per protocol criteria, after resolution of this laboratory abnormality switched to tocilizumab IV infusions of 8 mg/kg Q4W up to Week 52 in Part 2 of the study.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 March 2013	In Protocol WA28029 version 2 the Patient-reported outcome measures section was updated to use Child Health Assessment Questionnaire (CHAQ) instead of Juvenile Arthritis Multidimensional Assessment Report (JAMAR). Physician global assessment of disease activity and parent/patient global assessment of overall well-being were updated to use 100 mm horizontal visual analogue scale (VAS).
07 January 2016	Protocol WA28029 version 3 included the addition of a preliminary screening assessment (Screening Evaluation 1) and a run-in phase of $\leq 24$ weeks (Part 1). The proposed modifications were intended to increase enrollment by helping to identify participants with resolved laboratory abnormalities as per protocol criteria in Part 1 on the TCZ Q2W regimen who were eligible to participate in the decreased dose frequency phase (Part 2).

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
