General information about the trial

Main objective of the trial:

- To evaluate the safety and tolerability of multiple doses of ALN-TTR02 (patisiran).

Protection of trial subjects:

A Safety Review Committee (SRC) was in place for this study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 May 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

End point description: The number of subjects experiencing adverse events (AEs), serious adverse events (SAEs) and study drug discontinuation (due to any reason).	
End point type	Primary
End point timeframe: Up to 56 days post first dose	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No inferential analyses were conducted as the primary endpoint was safety and tolerability. Analyses were descriptive in nature.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Statistics have been reported for all cohorts in the baseline period. Patients in the arm titled 'Cohort 6' and the arm titled 'Cohort 7, 8 and 9' received 300 µg/kg ALN-TTR02 (patisiran) every 3 weeks. Therefore these two arms have been combined in the statistical analysis of PK parameters and are reported as 'Cohort 6, 7, 8 and 9'. The arms have not been combined for reporting of other endpoints due to the use of different premedication regimens.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 June 2012	Protocol Amendment 1.0 <ul style="list-style-type: none">Removed the requirement that the SRC review safety data on all patients within a dose level between the first and second doses of study drug based on favourable single-dose safety data that emerged from the completed Phase 1 studies of ALN-TTR02 (patisiran) at doses greater than or equal to the proposed highest dose in this study.Extended the postdose on-site observation period from 6 hours to 24 hours post infusion.
16 January 2013	Protocol Amendment 2.0 <ul style="list-style-type: none">Added alternative dosing regimens
