Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 March 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 March 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to determine whether add-on therapy with ponesimod reduced relapse frequency as compared to placebo in subjects with active Relapsing Multiple Sclerosis (RMS) who were treated with dimethyl fumarate (DMF) (Tecfidera).

Protection of trial subjects:

The study was conducted in full compliance with ICH-GCP guidelines, the principles of the "Declaration of Helsinki" and with the laws and regulations of the country in which the research is conducted. Safety evaluations included adverse events assessment through out the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 February 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	136
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total 136 subjects were randomized, 68 in both arms (ponesimod 20mg plus DMF [dimethyl fumarate] & placebo plus DMF). Of 136 subjects, 107 (50 in ponesimod 20mg plus DMF; 57 in placebo plus DMF) completed study till early termination.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Ponesimod plus dimethyl fumarate (DMF)

Arm description:

Subjects were up-titrated during Days 1 to 14 with 2 to 10 mg of ponesimod once daily and maintenance dose of 20 mg ponesimod tablets once daily from Day 15 to end of treatment. In addition, subjects also continued receiving DMF capsules, orally, as background therapy.

Arm type	Experimental
Investigational medicinal product name	Ponesimod
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Ponesimod 2-10 mg was administered as per titration sequence once daily from Day 1 to 14. Ponesimod 20 mg was administered once daily as maintenance dose from Day 15 to Week 156.

Investigational medicinal product name	dimethyl fumarate (DMF)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subject continued receiving DMF as background therapy.

Arm title	Placebo plus dimethyl fumarate (DMF)
------------------	--------------------------------------

Arm description:

Subjects received matching placebo once daily during Days 1 to 14 and maintenance dose from Day 15 to end of treatment. In addition, subjects also continued receiving DMF capsules, orally, as background therapy.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Matching Placebo was administered as per titration sequence once daily from Day 1 to 14 and

maintenance dose from Day 15 to Week 156.

Investigational medicinal product name	dimethyl fumarate (DMF)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subject continued receiving DMF as background therapy.

Reporting group description: Subjects received matching placebo once daily during Days 1 to 14 and maintenance dose from Day 15 to end of treatment. In addition, subjects also continued receiving DMF capsules, orally, as background therapy.	

Primary: Annualized Confirmed Relapse Rate (ARR)

End point title	Annualized Confirmed Relapse Rate (ARR)
End point description: Relapse: occurrence of acute episode of one or more new worsened symptoms of Multiple sclerosis (MS), not linked to fever/infection, lasting 24 hours after stable 30 days. Confirmed relapse: increase from baseline at least 0.5 Expanded Disability Status Scale (EDSS) score or one point in 1, 2 or 3 Functional Systems (FS), excluding bowel/bladder and cerebral/mental FS. EDSS and FS scores are based on neurological examination (NE) for rating its impairment in MS. Among 8 FS, 7 are ordinal clinical rating scales range 0-5 or 6 with higher scale indicates overall functional impairment assessing Visual, Brain Stem, Pyramidal, Cerebellar, Sensory, Bowel/Bladder functions. Rating individual FS scores used to rate EDSS in link with observations, information concerning gait and use of assistance. EDSS is ordinal clinical rating scale from 0 (normal NE) to 10 (deaths). Full Analysis Set (FAS) included all randomized subjects who had at least one dose of study treatment and post baseline efficacy	
End point type	Primary

Statistical analyses

Statistical analysis title	Statistical Analysis
Comparison groups	Ponesimod plus dimethyl fumarate (DMF) v Placebo plus dimethyl fumarate (DMF)

Number of subjects included in analysis	133
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.5252
Method	Negative binomial regression
Parameter estimate	Treatment effect (Rate Ratio)
Point estimate	1.27
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.608
upper limit	2.654

Secondary: 12-Week Confirmed Disability Accumulation (CDA) as Assessed by Kaplan Meier Estimate (Percentage of Subjects at Week 96)

End point title	12-Week Confirmed Disability Accumulation (CDA) as Assessed by Kaplan Meier Estimate (Percentage of Subjects at Week 96)
-----------------	--

End point description:

12-Week CDA as assessed by Kaplan Meier estimate (Percentage of Subjects Week 96) was defined as an increase of at least 1.5 in Expanded Disability Status Scale (EDSS) for subjects with a baseline EDSS score of 0.0 or an increase of at least 1.0 in EDSS for subjects with a baseline EDSS score of 1.0 to 5.0, or an increase of at least 0.5 in EDSS for participants with a baseline EDSS score greater than or equal to (\geq) 5.5, which was confirmed after 12 weeks. Baseline EDSS was defined as the last EDSS score recorded prior to randomization. EDSS is an ordinal clinical rating scale ranging from 0 (normal neurological examination) to 10 (death due to MS). FAS included all randomized subjects who had at least one dose of study treatment and had one post baseline efficacy assessment. Subjects were analyzed according to randomized treatment.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to End of treatment + 15 days (maximum up to 147 Weeks)

Adverse event reporting additional description:

Treatment-Emergent Adverse Events (TEAEs) included deaths, Serious Adverse Events (SAEs), Adverse Events (AEs) leading to premature treatment discontinuation, and Adverse Events of Special Interest (AESIs) were summarized. Safety Analysis Set (SAF) includes all subjects who received at least one dose of study treatment.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 December 2017	<p>The main reasons for the amendment are to make the following changes to inclusion criterion:</p> <p>1) To include the presence of at least one new or one unequivocally enlarging T2 lesion on magnetic resonance imaging (MRI) of the brain or spinal cord as an alternative criterion of disease activity. In order to assess this alternative criterion, two MRI scans have to be compared; the first MRI scan must be performed within 15 months prior to Visit 1 (Screening) and after at least 3 months of dimethyl fumarate (DMF) treatment; the second MRI scan must be performed prior to randomization (i.e., MRI performed at Visit 2 [Baseline] may be used). The presence of at least one new or one unequivocally enlarging MRI T2 lesion has to be confirmed by the central MRI reading facility prior to randomization of the subject.</p> <p>2) To include the presence of MRI T1 gadolinium-enhancing (Gd+) lesions observed on the pre-randomization MRI scan of the brain as an alternative criterion of disease activity.</p>

Notes:

Interruptions (globally)
