General information about the trial

Main objective of the trial:

This study will evaluate the efficacy, safety, and tolerability of sofosbuvir (SOF; GS-7977) in combination with ribavirin (RBV) with or without pegylated interferon (Peg-IFN) in adults with chronic hepatitis C virus (HCV) infection who participated in a prior Gilead HCV study and have not achieved sustained virologic response (SVR).

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Recruitment

Recruitment details:

Participants were enrolled at a total of 152 study sites from their prior Gilead study in North America, Europe, Australia, and New Zealand. The first participant was screened on 22 June 2012. The last study visit occurred on 22 December 2014.

Pre-assignment

Screening details:

585 participants were screened.

Period 1

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 February 2013	Incorporated 2 additional treatment groups: (1) SOF+RBV for a duration of 24 weeks for subjects with genotype 2 or 3 HCV infection and (2) SOF+Peg-IFN+RBV for a duration of 12 weeks for subjects with any genotype of HCV infection.
10 May 2013	Provided rationale and guidance for genotype for each treatment group, updated exclusion criteria to be in agreement with Peg-IFN contraindications, and added guidelines for toxicity management of Peg-IFN.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

There were no limitations affecting the analysis or results.
