Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000533-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	02 June 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 August 2017
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the antiviral efficacy of tenofovir disoproxil fumarate (tenofovir DF; TDF) versus placebo in pediatric population (aged 2 to < 12 years at the time of enrollment) with chronic hepatitis B (CHB) infection.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	India: 13
Country: Number of subjects enrolled	Taiwan: 2
Country: Number of subjects enrolled	United States: 17
Country: Number of subjects enrolled	Romania: 23
Country: Number of subjects enrolled	Korea, Republic of: 34
Country: Number of subjects enrolled	Bulgaria: 1
Worldwide total number of subjects	90
EEA total number of subjects	24

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	1
Children (2-11 years)	88
Adolescents (12-17 years)	1
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in the United States, Asia, and Europe. The first participant was screened on 06 December 2012. The last Week 192 study visit occurred on 02 June 2020.

Pre-assignment

Screening details:

176 participants were screened.

Period 1

Period 1 title	Double-Blind Period (Through Week 48/72)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Tenofovir Disoproxil Fumarate

Arm description:

Blinded Randomized Phase: Tenofovir disoproxil fumarate (TDF) tablet or oral powder once daily (up to 300 mg depending on weight) for 72 weeks (protocol amendment 2) or 48 weeks (protocol amendment 3)

Open-Label Treatment Phase: After Week 72 (protocol amendment 2) or Week 48 (protocol amendment 3), participants switched to open-label TDF treatment for an additional 120 weeks (protocol amendment 2) or 144 weeks (protocol amendment 3).

Open-Label Extension Phase: After Week 192, participants are offered open-label TDF treatment until it was commercially available in that country for treatment of chronic HBV in individuals of their age and weight.

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	Viread®
Pharmaceutical forms	Tablet, Oral powder
Routes of administration	Oral use

Dosage and administration details:

Administered once daily

Arm title	Placebo
------------------	---------

Arm description:

Blinded Randomized Phase: Placebo tablet or oral powder once daily for 72 weeks (protocol amendment 2) or 48 weeks (protocol amendment 3)

Open-Label Treatment Phase: After Week 72 (protocol amendment 2) or Week 48 (protocol amendment 3), participants switched to open-label TDF treatment for an additional 120 weeks (protocol amendment 2) or 144 weeks (protocol amendment 3).

Open-Label Extension Phase: After Week 192, participants are offered open-label TDF treatment until it was commercially available in that country for treatment of chronic HBV in individuals of their age and weight.

Arm type	Placebo

Number of subjects in period 1^[1]	Tenofovir Disoproxil Fumarate	Placebo
Started	60	29
Completed	56	25
Not completed	4	4
Withdrew Consent/Assent	3	3
Participant Noncompliance	1	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 1 participant who was randomized but not treated was not included in the Safety Analysis Set for Period table 1 reported above.

Period 2

Period 2 title	Open-Label Phase (Weeks 49/73-192)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Tenofovir Disoproxil Fumarate

Arm description:

Blinded Randomized Phase: Tenofovir disoproxil fumarate (TDF) tablet or oral powder once daily (up to 300 mg depending on weight) for 72 weeks (protocol amendment 2) or 48 weeks (protocol amendment 3)

Number of subjects included in analysis	85
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 [8]
Method	Cochran-Mantel-Haenszel

Notes:

[8] - 2-sided Cochran-Mantel-Haenszel tests adjusted for age at baseline and region strata

Secondary: Percentage of Participants With Normalized ALT at Week 192, Based on the Central Lab Normal Range

End point title	Percentage of Participants With Normalized ALT at Week 192, Based on the Central Lab Normal Range
-----------------	---

End point description:

Normal ALT was defined as ≤ 34 U/L for females aged 2-15 years old or males aged 1-9 years old, and ≤ 43 U/L for males aged 10-15 years old based on the central lab normal range. ALT normalization was defined as an ALT value that changed from above the normal range at baseline to within the normal range at the given postbaseline visit. Participants in the Full Analysis Set with abnormal ALT values at baseline were analyzed. The missing equals failure approach was used where all

participants with missing data were considered to have failed to reach the endpoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

First dose date up to the Week 192 Data Cut for Open-Label Phase;

Additional adverse event data will be reported after study is completed and final analysis is done.

Adverse event reporting additional description:

Safety Analysis all randomized participants who have received at least 1 dose of study drug. Participants were analyzed according to the treatment to which they received during the blinded phase.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 March 2012	The changes were primarily updates to/clarification of study objectives, eligibility criteria, study procedures, and use of concomitant medications and oral contraception.
08 November 2012	<ul style="list-style-type: none">- Updates to the design and conduct of the PK substudy in response to regulatory authority comments.- Participant dosing diaries, a section defining special situations and instructions for reporting special situations, and criterion and instructions for unblinding an investigator in the event of a medical emergency were also introduced.- Other changes included a change in medical monitor and clarification of study objectives, eligibility criteria, and procedures.
29 February 2016	Due to difficulty enrolling participants, to limit exposure of participants to Placebo-TDF, and upon agreement of the Food and Drug Administration (FDA) that approximately 90 participants would be sufficient to conduct the study, the primary efficacy endpoint was changed from Week 72 to Week 48. The amendment specified that upon completing 48 weeks of blinded treatment, all participants would switch to open-label TDF for the remainder of the study, and participants who were beyond Week 48 under the previous protocol would switch to open-label TDF at Week 72 (as originally planned). All participants would receive open-label TDF until Week 192 (end of study).
04 August 2016	<ul style="list-style-type: none">- An extension treatment period was added, whereby all participants who completed the study were offered the opportunity to continue receiving open-label TDF until the time that TDF became commercially available for participants of their age and weight in the country of their enrollment. During the extension period, participants were to attend study visits every 12 weeks. Study procedures were updated accordingly.- Clarified the requirements for DXA scans and biochemical bone marker assessments performed at Week 192/end of study or premature discontinuation of study drug and updated the physical description of TDF 300 mg tablets.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
