#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 December 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 December 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate whether treatment with ibrutinib compared with temsirolimus would result in prolongation of progression-free survival (PFS) in subjects with relapsed or refractory mantle cell lymphoma (MCL) who have received at least 1 prior rituximab-containing chemotherapy regimen.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. Safety evaluations included monitoring of adverse events, clinical laboratory tests, physical examinations, Eastern Cooperative Oncology Group (ECOG) criteria for performance status, and concomitant medication usage.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 December 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 17
Country: Number of subjects enrolled	Brazil: 15
Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	Colombia: 7
Country: Number of subjects enrolled	Czech Republic: 14
Country: Number of subjects enrolled	Germany: 23
Country: Number of subjects enrolled	Spain: 19
Country: Number of subjects enrolled	France: 10
Country: Number of subjects enrolled	United Kingdom: 27
Country: Number of subjects enrolled	Hungary: 12
Country: Number of subjects enrolled	Ireland: 3
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	Korea, Republic of: 14
Country: Number of subjects enrolled	Mexico: 2
Country: Number of subjects enrolled	Netherlands: 2

Country: Number of subjects enrolled	Poland: 23
Country: Number of subjects enrolled	Portugal: 6
Country: Number of subjects enrolled	Russian Federation: 29
Country: Number of subjects enrolled	Sweden: 18
Country: Number of subjects enrolled	Taiwan: 6
Country: Number of subjects enrolled	Ukraine: 10
Worldwide total number of subjects	280
EEA total number of subjects	188

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	107
From 65 to 84 years	170
85 years and over	3

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 280 subjects were enrolled in this study. 139 subjects were randomized and treated in the ibrutinib arm. 141 subjects were randomized to the temsirolimus arm and 139 were treated, 2 subjects were randomized but did not receive treatment.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Treatment Arm A: Ibrutinib

Arm description:

Subjects received 560 milligram (mg) ibrutinib (4\*140-mg capsules) by mouth once daily continuous (without interruption) self-administered home treatment during the 21 day cycle.

Arm type	Experimental
Investigational medicinal product name	Ibrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received 560 mg ibrutinib (4\*140 mg capsules) once daily continuously during the 21-day cycle.

<b>Arm title</b>	Treatment Arm B: Temsirolimus
------------------	-------------------------------

Arm description:

Subjects received temsirolimus intravenous (IV) infusion 175 mg on Days 1, 8, 15 of the first cycle followed by 75 mg on Days 1, 8, 15 of each subsequent 21-day cycle. Each temsirolimus dose is infused over a 30 to 60 minute period.

Arm type	Active comparator
Investigational medicinal product name	Temsirolimus
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received temsirolimus intravenous infusion 175 mg on Days 1, 8, 15 of the first cycle followed by 75 mg on Days 1, 8, 15 of each subsequent 21-day cycle.

<b>Number of subjects in period 1</b>	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirrolimus
Started	139	141
Treated	139	139
Completed	0	0
Not completed	139	141
Consent withdrawn by subject	10	15
Death	77	83
Study terminated by sponsor	50	41
Lost to follow-up	2	2

## Baseline characteristics

### Reporting groups

Reporting group title	Treatment Arm A: Ibrutinib
-----------------------	----------------------------

Reporting group description:

Subjects received 560 milligram (mg) ibrutinib (4\*140-mg capsules) by mouth once daily continuous (without interruption) self-administered home treatment during the 21 day cycle.

Reporting group title	Treatment Arm B: Temsirolimus
-----------------------	-------------------------------

Reporting group description:

Subjects received temsirolimus intravenous (IV) infusion 175 mg on Days 1, 8, 15 of the first cycle followed by 75 mg on Days 1, 8, 15 of each subsequent 21-day cycle. Each temsirolimus dose is infused over a 30 to 60 minute period.

Reporting group values	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirolimus	Total
Number of subjects	139	141	280
Title for AgeCategorical Units: subjects			
Adults (18-64 years)	53	54	107
From 65 to 84 years	86	84	170
85 years and over	0	3	3

Male	100	108	208

## End points

### End points reporting groups

Reporting group title	Treatment Arm A: Ibrutinib
Reporting group description: Subjects received 560 milligram (mg) ibrutinib (4*140-mg capsules) by mouth once daily continuous (without interruption) self-administered home treatment during the 21 day cycle.	
Reporting group title	Treatment Arm B: Temsirolimus
Reporting group description: Subjects received temsirolimus intravenous (IV) infusion 175 mg on Days 1, 8, 15 of the first cycle followed by 75 mg on Days 1, 8, 15 of each subsequent 21-day cycle. Each temsirolimus dose is infused over a 30 to 60 minute period.	

### Primary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS)
End point description: PFS is defined as the duration in months from the date of randomization to the date of progression disease (PD) or relapse from complete response (CR) or death whichever was reported first and was assessed based on the investigator assessment. Revised Response Criteria for Malignant Lymphoma categorizes the response of the treatment of a patient's tumour to CR (the disappearance of all evidence of disease), Relapsed Disease or PD (Any new lesion or increase by greater than or equal to [ $\geq$ ] 50 percent [%] of previously involved sites from nadir). The Intent-to-Treat (ITT) population included all subjects randomized into the study regardless of treatment actually received.	
End point type	Primary
End point timeframe: Time from the date of randomization until the date of first documented evidence of progressive disease (or relapse for subjects who experience CR during the study) or death, whichever occurred first (approximately 48 months)	

End point values	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirolimus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	139	141		
Units: Months				
median (confidence interval 95%)	15.6 (10.6 to 25.1)	6.2 (4.2 to 7.8)		

### Statistical analyses

Statistical analysis title	Statistical Analysis 1
Comparison groups	Treatment Arm A: Ibrutinib v Treatment Arm B: Temsirolimus

Number of subjects included in analysis	280
Analysis specification	Pre-specified
Analysis type	other
P-value	< 0.0001
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.45
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.35
upper limit	0.6

### Secondary: Overall Response Rate (ORR)

End point title	Overall Response Rate (ORR)
End point description:	
ORR is defined as the percentage of participants who achieved either CR or PR as best overall response based on the investigator assessment where CR is defined as disappearance of all target lesions, PR is defined as greater than or equal to 30 % decrease in the sum of the longest diameter of target lesions and Overall Response (OR) is the sum of CR and PR. The ITT population included all subjects randomized into the study regardless of treatment actually received.	
End point type	Secondary
End point timeframe:	
Approximately 48 months	

End point values	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirolimus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	139	141		
Units: Percentage of Subjects				
number (not applicable)	77.0	46.8		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)
End point description:	
Duration of response was defined as the interval between the date of initial documentation of a response and the date of the first documented evidence of progressive disease or death, whichever event occurred first. The analysis was based on the investigator assessment. The ITT population included all subjects randomized into the study regardless of treatment actually received. Here 'N' signifies number of subjects analysed for this endpoint.	
End point type	Secondary

End point timeframe:  
Approximately 48 months

End point values	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirrolimus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	107	66		
Units: Months				
median (confidence interval 95%)	23.1 (16.2 to 28.1)	6.3 (4.7 to 8.6)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Time to Next Treatment (TTNT)

End point title	Time to Next Treatment (TTNT)
-----------------	-------------------------------

End point description:

Time to next treatment was measured from the date of randomization to the start date of any anti-neoplastic treatment subsequent to study treatment. Here, for Upper 95% CI '99999' indicates median TTNT that was not estimable at primary analysis due to in less than 50% patients event had occurred. The ITT population included all subjects randomized into the study regardless of treatment actually received.

End point type	Secondary
----------------	-----------

End point timeframe:

Approximately 48 months

End point values	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirrolimus		
Subject group type	Reporting group	Reporting group

### Secondary: Time to Worsening in the Lymphoma Subscale of the Functional Assessment of Cancer Therapy-Lymphoma (FACT-Lym)

End point title	Time to Worsening in the Lymphoma Subscale of the Functional Assessment of Cancer Therapy-Lymphoma (FACT-Lym)
-----------------	---

End point description:

Time to worsening in the Lym subscale of the FACT-Lym, defined as the interval from the date of randomization to the start date of worsening. Worsening was defined by a 5-point decrease from baseline. The FACT-Lym PRO questionnaires were administered to assess functional status and well-being and lymphoma symptoms over time. FACT-Lym Lymphoma subscale contains 15 questions, scores from 0 to 4 for each question (higher the worse). Lymphoma subscale score is the total of reverse scores, range 0 to 60. Here, 99999 indicates median and upper limit of CI of FACT-Lym that was not estimable at final analysis due to less than 50% patients had events occurred. The ITT population included all subjects randomized into the study regardless of treatment actually received.

End point type	Secondary
----------------	-----------

End point timeframe:

Approximately up to 48 months

End point values	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirolimus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	139	141		
Units: Weeks				
median (confidence interval 95%)	99999 (81.4 to 99999)	10.6 (6.6 to 15.3)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Subjects Affected With Treatment-emergent Adverse Events

End point title	Number of Subjects Affected With Treatment-emergent Adverse Events
End point description: An AE is any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. An serious adverse event (SAE) is an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Safety population included all randomized subjects who received at least 1 dose of the study drug.	
End point type	Secondary
End point timeframe: Time from first dose of study drug until the last dose date + 30 days or the start of a subsequent anti-neoplastic therapy, whichever occur earlier	

End point values	Treatment Arm A: Ibrutinib	Treatment Arm B: Temsirolimus		
Subject group type	Reporting group	Reporting group

## Other pre-specified: The Mean Change From Baseline in the EuroQol-5 Level Instrument (EQ-5D-5L) Scores for Each Post Baseline Assessment

End point title	The Mean Change From Baseline in the EuroQol-5 Dimension 5-Level Instrument (EQ-5D-5L) Scores for Each Post Baseline Assessment
-----------------	---

End point description:

The EQ-5D is a subject rated questionnaire to assess health-related quality of life in terms of a single utility score. Health State Profile component assesses level of current health for 5 domains: mobility, self-care, usual activities, pain and discomfort, and anxiety and depression, using 5 levels (1=no problems, 2=slight problems, 3=moderate problems, 4=severe problems, and 5=extreme problems). Scoring formula developed by EuroQol Group assigns a utility value for each domain in the profile. Score is transformed and possible total score range -0.594 to 1; higher score indicates a better health state. Here, number of subjects analyzed 'N' signifies number of subjects evaluable for this endpoint. 'n' signifies the number of subjects analyzed at specified time point. The ITT population included all subjects randomized into the study regardless of treatment actually received.

End point type	Other pre-specified
End point timeframe:

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Approximately up to 48 months

Adverse event reporting additional description:

Safety population included all randomized subjects who received at least 1 dose of study agent (ibrutinib or temsirolimus) during the treatment phase.

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18.1
--------------------	------

### Reporting groups

Reporting group title	Temsirolimus
-----------------------	--------------

Reporting group description:

Subjects in Treatment Arm B received temsirolimus intravenous (IV) infusion 175 mg on Days 1, 8, 15 of the first cycle followed by 75 mg on Days 1, 8, 15 of each subsequent 21-day cycle. Each temsirolimus dose is infused over a 30 to 60 minute period.

Reporting group title	Ibrutinib
-----------------------	-----------

Reporting group description:

Subjects in Treatment Arm A received 560 milligram (mg) oral ibrutinib (4\*140-mg capsules) once daily continuously (self-administration at home) during the 21-day cycle.

Serious adverse events	Temsirolimus	Ibrutinib	
Total subjects affected by serious adverse events			
subjects affected / exposed	83 / 139 (59.71%)	79 / 139 (56.83%)	
number of deaths (all causes)	82	77

occurrences (all)	14	23	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 December 2012	This amendment was implemented to clarify management of ibrutinib with CYP3A4/5 inhibitors/inducers and anticoagulants, including warfarin, and to clarify perioperative management of study medication.
30 July 2014	This amendment was implemented to introduce crossover treatment for subjects randomized to temsirolimus who have IRC-confirmed disease progression; and to update the protocol with new safety-related information and safety instructions, minor revisions to operational aspects of the study, provide updates based on new information, and perform minor modifications and formatting changes.
04 August 2015	This amendment was implemented to include the information on the conduct of the study after the clinical cutoff for the primary analysis occurs, and to include the new safety-related information and safety instructions.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Within this context, there were no notable study limitations identified by the Sponsor.
