

## Clinical trial results:

**An open-label, multi-center, efficacy and safety study of deferasirox in iron overloaded patients with nontransfusion dependent thalassemia (THETIS)**

**Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.novfor> complete trial results.**

### Summary

EudraCT number	2012-000650-64
Trial protocol	GB IT GR
Global end of trial date	17 January 2019

### Results information

Result version number	v1 (current)
This version publication date	02 August 2019
First version publication date	02 August 2019

### Trial information

#### Trial identification

Sponsor protocol code	CICL670E2419
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01709838
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Novartis Pharma, AG
Sponsor organisation address	CH-4002, Basel, Switzerland,
Public contact	Clinical Disclosure Office, Novartis Pharma, AG, +41 CICL670E2419, <a href="mailto:novartis.email@novartis.com">novartis.email@novartis.com</a>

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 January 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 January 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Assess the efficacy of deferasirox in liver iron removal after Week 52

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	China: 68
Country: Number of subjects enrolled	Greece: 5
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Lebanon: 20
Country: Number of subjects enrolled	Thailand: 16
Country: Number of subjects enrolled	Tunisia: 3
Country: Number of subjects enrolled	Turkey: 17
Country: Number of subjects enrolled	United Kingdom: 2
Worldwide total number of subjects	134
EEA total number of subjects	10

Notes:

## Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	7
Adolescents (12-17 years)	18
Adults (18-64 years)	109
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

At least 117 patients were planned to be enrolled; 134 patients were enrolled (68 Chinese and 66 non-Chinese).

### Pre-assignment

Screening details:

The target population of this study was iron overloaded NTDT patients, at least ten years old. Pediatric patients were required to weigh  $\geq 20$  kg, to allow dosing of 5 mg/kg with one 125 mg tablet.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Deferasirox
-----------	-------------

Arm description:

All patients were treated with 10mg/kg/day deferasirox with dose adjustments after 4 weeks of treatment according to baseline Liver Iron Concentration (LIC).

Arm type	Experimental
Investigational medicinal product name	Deferasirox
Investigational medicinal product code	ICL670
Other name	
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

Dosage and administration details:

All patients were treated with 10 mg/kg/day deferasirox (4 weeks). Dose adjustments after 4 weeks of treatment according to baseline LIC to 10 mg/kg/day, 15 mg/kg/day, 20 mg/kg/day. Dose adjustments at Week 24 and approximately every 6 months thereafter according to LIC.

Number of subjects in period 1	Deferasirox
Started	134
Completed	67
Not completed	67
Adverse event, serious fatal	3
Consent withdrawn by subject	21
Physician decision	4
Adverse event, non-fatal	4
Pregnancy	10
Lost to follow-up	16
Subject/guardian decision	8
Protocol deviation	1

## Baseline characteristics

### Reporting groups

Reporting group title	Deferasirox
-----------------------	-------------

Reporting group description:

All patients were treated with 10mg/kg/day deferasirox with dose adjustments after 4 weeks of treatment according to baseline Liver Iron Concentration (LIC).

Reporting group values	Deferasirox	Total	
Number of subjects	134	134	
Age, Customized Units: Subjects			
<2y - <12 years	7	7	
12y - <18 years	18	18	
18y - < 65 years	109	109	
Age Continuous Units: years			
arithmetic mean	28.0		
standard deviation	± 11.10	-	
Sex: Female, Male Units: Subjects			
Female	58	58	
Male	76	76	
Race/Ethnicity, Customized Units: Subjects			
Asian	85	85	
Caucasian	48	48	
Other	1	1	

## End points

### End points reporting groups

Reporting group title	Deferasirox
Reporting group description: All patients were treated with 10mg/kg/day deferasirox with dose adjustments after 4 weeks of treatment according to baseline Liver Iron Concentration (LIC).	

### Primary: Absolute Change in Liver Iron Content (LIC) at 52 weeks from baseline

End point title	Absolute Change in Liver Iron Content (LIC) at 52 weeks from baseline <sup>[1]</sup>
End point description: Absolute change in liver iron concentration measured by MRI from baseline after 52 weeks of treatment	
End point type	Primary
End point timeframe: Baseline, 52 weeks	
Notes:	

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was done, only an exploratory statistical inference was done.

<b>End point values</b>	Deferasirox			
Subject group type	Reporting group			
Number of subjects analysed	134			
Units: mg Fe/g dw				
arithmetic mean (standard deviation)	-6.68 (± 7.018)			

### Statistical analyses

No statistical analyses for this end point

### Secondary: Percentage of participants with baseline LIC>15 achieving LIC<5 mg Fe/g dw

End point title	Percentage of participants with baseline LIC>15 achieving LIC<5 mg Fe/g dw
End point description: The percentage of participants with baseline LIC>15 mg Fe/g dw achieving an LIC <5 mg Fe/g dw during the study	
End point type	Secondary
End point timeframe: 5 years

## Secondary: Absolute Change in health-related outcomes using the Pediatric Quality of Life questionnaire (PedsQL™)

End point title	Absolute Change in health-related outcomes using the Pediatric Quality of Life questionnaire (PedsQL™)
-----------------	--

End point description:

The PedsQL™ is a modular approach to measuring health-related quality of life (HRQOL) in children and adolescents. The 23-item PedsQL™ Generic Core Scales encompass the essential core domains for pediatric HRQOL measurement: 1) Physical Functioning (8 items), 2) Emotional Functioning (5 items), 3) Social Functioning (5 items), and 4) School Functioning (5 items). The Generic Core Scales are designed to enable comparisons across patient and healthy populations. The higher values indicate a better evaluation of health. Range: 0 to 100 [0 (worst possible health state measured by the questionnaire) to 100 (best possible health state)].

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events and serious adverse events were collected for the maximum actual duration of treatment exposure and follow up for a participant per the protocol for approximately 63.2 months.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

occurrences (all)	0	4	4

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 June 2013	Amendment 1, issued after the inclusion of 35 patients, introduced the following changes: Extended study duration up to five years, as the previous study generated limited long-term data; Secondary objectives were added to assess the efficacy of treatment in patients with very high LIC, and in those who need re-treatment after reaching the target LIC during the study, to reflect the extended study duration; Added interruption of treatment when SF < 300 ng/mL based on safety data from another study, and in accordance with the label recommendation of deferasirox treatment interruption in NTDT patients with iron overload; Dose adjustments based on LIC were modified for clarification and the extended study duration; The analysis of serum transaminases, bilirubin, and alkaline phosphatase were added to the schedule of assessments, per recommended safety monitoring. The schedule of assessments was modified for the extended study duration; Clarifications regarding sample handling, ocular and auditory examination details, and new pregnancy language were included.
04 September 2014	Amendment 2, issued after closure of study recruitment and 134 patients enrolled. Following changes were made in alignment with the approved deferasirox prescribing information: Provided guidance on treating patients with moderate hepatic impairment and immediate discontinuation if Stevens-Johnson syndrome or severe hepatic impairment occurs; Changed the "highly effective" contraception methods to "effective". The former was inadvertently introduced into protocol Amendment 1; Added additional guidance regarding treatment discontinuation of patients with creatinine clearance < 40 mL/min or serum creatinine > 2×ULN, and caution should be used in patients with creatinine clearance between 40 to < 60 mL/min; Added additional guidance regarding the concomitant administration of deferasirox with CYP1A2 substrates. Vitamin C was moved from the prohibited concomitant medication category to drugs that should be administered with caution; Criteria for patient withdrawal, definition of the end of study, the maximum recommended restart dose and visit schedules were clarified; this amendment also clarified the timing of the two analyses of this study. A CSR was written based on the 1-year analysis (report date 12-Jun-2015); this final CSR is based on the final analysis at the end of the study, after 5 years of follow up

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.novfor> complete trial results.
