

Clinical trial results:

A Phase IIIB, Open Label, Multi-Center Extension study of V72_28 to assess antibody persistence, and the safety and tolerability of a booster dose after the completion of the vaccination course in study V72_28.

Summary

EudraCT number	2012-000657-30
Trial protocol	HU ES
Global end of trial date	17 November 2015

Results information

Result version number	v1 (current)
This version publication date	01 December 2016
First version publication date	01 December 2016

Trial information

Trial identification

Sponsor protocol code	V72_28E1
-----------------------	----------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01894919

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 October 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 September 2015
Global end of trial reached?	Yes
Global end of trial date	17 November 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the antibody persistence 24 to 36 months after the completion of the vaccination course, in subjects who participated in the V72_28 (2010-021528-81) study in Groups I to IV.

Protection of trial subjects:

This clinical study was designed, implemented and reported in accordance with the International conference of Harmonization (ICH) Harmonized Tripartite Guidelines for Good Clinical Practice, with applicable local regulations, Novartis codes on protection of human rights, and with the ethical principles laid down in the Declaration of Helsinki (European Council 2001, US Code of Federal Regulations, ICH 1997).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 June 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 562
Country: Number of subjects enrolled	Hungary: 289
Worldwide total number of subjects	851
EEA total number of subjects	851

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	815
Adolescents (12-17 years)	36
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Subjects were recruited from 9 study sites in Hungary and 8 study sites in Spain.

Pre-assignment

Screening details:

All enrolled subjects were included in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The trial was designed as an open-label study. Subjects were assigned to one of the vaccination group/subgroup based on the group specific inclusion criteria, using a standard web-randomization procedure.

Arms

Are arms mutually exclusive?	Yes
Arm title	2H3H511_V

Arm description:

In the parent study V72_28, subjects had received three primary doses and one booster dose of Bexsero® vaccine, at 2.5, 3.5, 5 months of age, and at 11 months of age, respectively. The subjects in this group received a fifth dose of Bexsero® vaccine in the present study.

Arm type	Experimental
Investigational medicinal product name	Bexsero®
Investigational medicinal product code	rMenB+OMV NZ
Other name	Meningococcal Recombinant serogroup B with Outer Membrane Vesicles (OMV) Vaccine
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL

Arm title	2H3H511_NV
------------------	------------

Arm description:

In the parent study V72_28, subjects had received three primary doses and one booster dose of Bexsero® vaccine, at 2.5, 3.5, 5 months of age, and at 11 months of age, respectively. These subjects were evaluated only for persistence.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

Arm title	3H5_11_V

Subject analysis set description:

Combined 02_2_5_V group + 02_2_5_NV group - subjects who received two catch-up doses of Bexsero® vaccine two months apart, at 2 and 5 years of age, respectively, in the parent study V72_28.

Subject analysis set title	02_6_10
----------------------------	---------

Subject analysis set type	Modified intention-to-treat
---------------------------	-----------------------------

Subject analysis set description:

Combined 02_6_10_V group + 02_6_10_NV group - subjects who received two catch-up doses of Bexsero® vaccine two months apart, at 6 and 10 years of age, respectively, in the parent study V72_28.

Primary: 1. Percentage of subjects with human serum bactericidal activity titers (hSBA) ≥ 4 or ≥ 5 against *Neisseria meningitidis* (N. meningitidis) serogroup B strains

End point title	1. Percentage of subjects with human serum bactericidal activity titers (hSBA) ≥ 4 or ≥ 5 against <i>Neisseria meningitidis</i> (N. meningitidis) serogroup B strains ^{[1][2]}
-----------------	---

End point description:

The antibody persistence in subjects, 24 to 36 months after completion of Bexsero® vaccination course in the parent study according to different schedules, is presented in terms of the percentage of subjects in each vaccine group, with hSBA titers ≥ 4 for what concerns the H44/76, 5/99 and NZ98/254 strains, and hSBA titers ≥ 5 for M10713 strain, alongside with the corresponding antibody responses in age-matched vaccine-naïve subjects at Baseline.

The functional bactericidal antibodies directed against serogroup B meningococcal were assessed by the Serum Bactericidal Assay (SBA) using human serum as the source of exogenous complement (hSBA). The analysis was performed on the Full analysis set (FAS)-persistence population, which included all subjects in the Enrolled Set who provided an evaluable serum sample at Visit 1.

End point type	Primary
----------------	---------

End point timeframe:

24 or 36 months after booster dose in the parent study; Baseline for vaccine-naïve subjects

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The scope of this primary end point was descriptive, no statistical hypothesis test was performed.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The results in this study were tabulated by age group and study period. Hence for each related endpoint, they are presented for only the respective groups in the baseline period, while the results for multiple endpoints account for all baseline groups.

Statistical analyses

No statistical analyses for this end point

Secondary: 9. Number of newly recruited naïve subjects (aged 8 to 12 years of age) reporting solicited local and systemic AEs

End point title	9. Number of newly recruited naïve subjects (aged 8 to 12 years of age) reporting solicited local and systemic AEs ^[12]
-----------------	--

End point description:

The number of newly recruited naïve subjects (aged 8 to 12 years of age) reporting solicited local and systemic AEs after receiving two catch-up doses of Bexsero® vaccine in the present study. The analysis was performed on the Solicited safety set, which included all subjects in the Exposed Set with solicited adverse event data.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1 (6 hr) through Day 7 after each vaccination

Notes:

[12] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The results in this study were tabulated by age group and study period. Hence for each related endpoint, they are presented for only the respective groups in the baseline period, while the results for multiple endpoints account for all baseline groups.

End point title	14. The GMR of hSBA titers against N.meningitidis serogroup B strains ^[17]
-----------------	---

End point description:

The within-subjects GMR of hSBA antibody titers (one month post booster vaccination versus pre-vaccination) after Bexsero® booster vaccination in the present study (24 to 36 months after completion of vaccination course according to different schedules in the parent study), alongside with the within-subject GMR for the first dose of Bexsero® vaccination of age-matched vaccine-naïve subjects. The analysis was performed on the FAS-Booster response population, which included all subjects in the Enrolled Set who received a study vaccination, provided an evaluable serum sample at Visit 2 (one month after the booster dose administration) and received all scheduled vaccinations in the parent study V72_28 (excluding naïve groups).

Day 1 (PRE) and Day 31

Notes:

[17] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The results in this study were tabulated by age group and study period. Hence for each related endpoint, they are presented for only the respective groups in the baseline period, while the results for multiple endpoints account for all baseline groups.

End point title	20. Number of subjects reporting unsolicited AEs ^[23]
-----------------	--

End point description:

The number of subjects reporting unsolicited AEs, after receiving Bexsero® booster vaccination (24 to 36 months after completion of vaccination course according to different schedules in the parent study) or two catch-up schedule of Bexsero® vaccine, is reported.

An unsolicited AE covers any untoward medical occurrence in a clinical investigation subject temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product and reported in addition to those solicited during the clinical study and any solicited symptom with onset outside the specified period of follow-up for solicited symptoms. 'Any' was defined as the occurrence of any unsolicited AE regardless of intensity grade or relation to vaccination. 'Possibly or Probably Related' = AE assessed by the investigator as related to the vaccination.

The analysis was performed on the Unsolicited safety set, which included all subjects in the Exposed Set with unsolicited AE data.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on the Exposed set, only on subjects with their symptom sheets completed.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on the Exposed set, only on subjects with their symptom

[19] - The number of subjects exposed to this adverse event is less than the total number of subjects

exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on the Exposed set, only on subjects with their symptom sheets completed.

[20] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on the Exposed set, only on subjects with their symptom sheets completed.

[21] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The analysis was performed on the Exposed set, only on subjects with their symptom sheets completed.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 January 2013	Changes have been implemented prior to the first protocol Submission, in order to better clarify the reminder calls intervals and next visit date after vaccination, to specify that Fever is defined as temperature $\geq 38^{\circ}\text{C}$, to remove the collection of Ethnicity as a demographic data, to remove the reference to unblinding and to specify that medically attended Fever symptoms are collected during the 7 days after vaccination.
14 October 2013	The protocol has been amended to better clarify that the immune response following the MenB vaccination will be assessed by the percentage of subjects achieving hSBA titer of at least 4, and also to better clarify that, for the Serum Bactericidal Assays (SBA), using human serum as the source of exogenous complement (hSBA), performed at the Novartis Vaccines Clinical Serology Laboratory (Marburg, Germany), a cut-off of 5 is used to take account of the assay validation, while for hSBA not performed at the Novartis Vaccines Clinical Serology Laboratory (Marburg, Germany), a cut-off of 4 is used. This amendment also provides the opportunity to better clarify the description of response variables for the statistical plan, to better define study description and to harmonize primary and secondary endpoints with revised study objectives. The list of abbreviation has also been updated and minor editorial changes have been implemented.
28 November 2013	The protocol has been amended to define End of study in compliance with the Novartis Quality Manual and the Corporate Data Disclosure Policy.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
