

Clinical trial results:

A randomized, double-blind, placebo-controlled, two-way crossover 14-day study to investigate the safety, tolerability, pharmacodynamics and pharmacokinetics of repeat dose inhaled fluticasone furoate 100 mcg in children aged 5-11 years with persistent asthma

Summary

EudraCT number	2012-000753-31
Trial protocol	Outside EU/EEA

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000431-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 January 2011
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	29 January 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the safety and tolerability following administration of fluticasone furoate 100 µg (via a novel dry powder inhaler) once daily for 14 days in 5–11 year-old subjects.

Protection of trial subjects:

A parent was required to stay with the subjects for the long days in the clinic. As much as possible children in the same age group were scheduled for visits on the same day. Games and movies were provided for diversion during the long clinic days. Effort was made to have the same staff members work with the children to help reduce anxiety. Topical anesthetics were used at injection site to reduce discomfort from blood collections. An indwelling catheter was inserted for serial blood draws, to prevent the pain and distress associated with repeated needlesticks.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 May 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled into one of two cohorts based upon age; the younger cohort was enrolled after a review of the safety/pharmacokinetic data of at least six participants from the older cohort. Each participant was assigned to treatment randomly; assignment was not to be influenced by whether participants were in Cohort 1 or Cohort 2.

Pre-assignment

Screening details:

A Baseline assessment was carried out on Day 1 of the first treatment period. Participants were then randomized to one of the two possible treatment sequences (fluticasone furoate [FF] 100 µg followed by placebo; placebo followed by FF 100 µg). Results are reported by intervention, regardless of the age of the participant.

Period 1

Period 1 title	Treatment Period 1 (14 days):Overall
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Subject, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence 1: FF 100 µg followed by Placebo

Arm description:

Participants received fluticasone furoate (FF) 100 micrograms (µg) in Treatment Period 1 and matching placebo in Treatment Period 2. Inhaled FF 100 µg and matching placebo were administered once daily in the morning (Day 1 to Day 14) via a Dry Powder Inhaler. The washout period between the 14-day treatment periods was at least 7 days.

Arm type	Experimental:Placebo
Investigational medicinal product name	Fluticasone furoate; placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

FF 100ug or Pbo once daily x 14 days; 7 day w/o; crossover

Arm title	Sequence 2: Placebo followed by FF 100 µg
------------------	---

Arm description:

Participants received placebo in Treatment Period 1 and FF 100 µg in Treatment Period 2. Inhaled FF 100 µg and matching placebo were administered once daily in the morning (Day 1 to Day 14) via a Dry Powder Inhaler. The washout period between the 14-day treatment periods was at least 7 days.

Arm type	Experimental:Placebo
Investigational medicinal product name	Fluticasone furoate; placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

FF 100ug or Pbo once daily x 14 days; 7 day w/o; crossover

Number of subjects in period 1	Sequence 1: FF 100 µg followed by Placebo	Sequence 2: Placebo followed by FF 100 µg
Started	14	13
Completed	12	12
Not completed	2	1
Adverse event, non-fatal	1	-
Protocol deviation	1	1

Period 2

Period 2 title	Washout Period (>=7 days)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Sequence 1: FF 100 µg followed by Placebo

Arm description:

Participants received fluticasone furoate (FF) 100 micrograms (µg) in Treatment Period 1 and matching placebo in Treatment Period 2. Inhaled FF 100 µg and matching placebo were administered once daily in the morning (Day 1 to Day 14) via a Dry Powder Inhaler. The washout period between the 14-day treatment periods was at least 7 days.

Arm type	Experimental:Placebo
Investigational medicinal product name	Fluticasone furoate; placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

FF 100ug or Pbo once daily x 14 days; 7 day w/o; crossover

Arm title	Sequence 2: Placebo followed by FF 100 µg
------------------	---

Arm description:

Participants received placebo in Treatment Period 1 and FF 100 µg in Treatment Period 2. Inhaled FF 100 µg and matching placebo were administered once daily in the morning (Day 1 to Day 14) via a Dry Powder Inhaler. The washout period between the 14-day treatment periods was at least 7 days.

Arm type	Experimental:Placebo
Investigational medicinal product name	Fluticasone furoate; placebo

Inhaled FF 100 µg and matching placebo were administered once daily in the morning (Day 1 to Day 14) via a Dry Powder Inhaler. The washout period between the 14-day treatment periods was at least 7 days.	
Subject analysis set title	Placebo
Subject analysis set type	Safety analysis
Subject analysis set description: All participants who received matching placebo in one or both of the two 14-day treatment periods. Matching placebo was administered once daily in the morning (Day 1 to Day 14) via the Dry Powder Inhaler. The washout period between the treatment periods was at least 7 days.	
Subject analysis set title	FF 100 µg
Subject analysis set type	Safety analysis
Subject analysis set description: All participants who received FF 100 µg in one or both of the 14-day treatment periods. Inhaled FF 100 µg was administered once daily in the morning (Day 1 to Day 14) via the Dry Powder Inhaler. The washout period between the treatment periods was at least 7 days.	
Subject analysis set title	FF 100 µg
Subject analysis set type	Sub-group analysis
Subject analysis set description: All participants who received FF 100 µg in one or both of the 14-day treatment periods. Inhaled FF 100 µg was administered once daily in the morning (Day 1 to Day 14) via the Dry Powder Inhaler. The washout period between the treatment periods was at least 7 days.	

Primary: Number of participants with any adverse event (AE) or any serious adverse event (SAE) during the Treatment Period

End point title	Number of participants with any adverse event (AE) or any serious adverse event (SAE) during the Treatment Period ^[1]
-----------------	--

End point description:

An AE is defined as any untoward medical occurrence in a participant or clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. A serious adverse event (SAE) is defined as any untoward medical occurrence that, at any dose, results in death, is life threatening, requires hospitalization or prolongation of existing hospitalization, results in disability/incapacity, or is a congenital anomaly/birth defect. Medical or scientific judgment should be exercised in deciding whether reporting is appropriate in other situations. Refer to the General Adverse AE/SAE module for a complete list of AEs and SAEs.

End point description:

During the pharyngometry assessment, participants inhaled through a wavetube, which had a mouthpiece with the same dimensions as the mouthpiece on the dry powder inhaler used for this study. This technique was used to measure the size of the throat and mouth (oropharynx) in the form of pharyngograms. Pharyngometry data were recorded for each day (Days 1 and 14 of the respective treatment period) using the mean of four measurements (pharyngograms), and the average oropharyngeal cross-sectional area was calculated.

Secondary: Total emitted dose (TED) on Days 1 and 14 of the respective treatment period

End point title	Total emitted dose (TED) on Days 1 and 14 of the respective treatment period
-----------------	--

End point description:

The total emitted dose (TED) is defined as the mass (micrograms) of the nominal dose that passes

beyond the throat. The recorded inhalation profiles of the participants and the mouth-throat (oropharyngeal) models of the sizes that approximated to pharyngometry measurements of the participants were used in conjunction with the electronic Lung (eLung) for in vitro assessment. The eLung is a breathing simulator that replicates the selected inhalation profile with an active inhaler placed at the lips end of the selected oropharyngeal model. After the dose is emitted from the inhaler, the analysis and assay of throat deposition and material passing beyond the throat was used to derive the nominal, minimum, and maximum predicted total emitted dose.
