

Clinical trial results:

Copenhagen Head Injury Ciclosporin (CHIC) Study:

An open-label, uncontrolled Phase II study to investigate pharmacokinetics, safety and biomarkers of efficacy of NeuroSTAT® (ciclosporin) in patients with severe traumatic brain injury (TBI)

Summary

EudraCT number	2012-000756-34
Trial protocol	DK
Global end of trial date	23 May 2017

Results information

Result version number	v1 (current)
This version publication date	07 June 2018
First version publication date	07 June 2018

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 September 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 May 2017
Global end of trial reached?	Yes
Global end of trial date	23 May 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To establish safety and to characterise the pharmacokinetic profile of two dosing regimens of ciclosporin in severe Traumatic Brain Injury (TBI) patients.

Protection of trial subjects:

Patients were extensively monitored in the 5 day infusion period. After treatment there was a monitoring period at the intensive care unit of 3 days.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 September 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 16
Worldwide total number of subjects	16
EEA total number of subjects	16

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Date of first enrollment: 03 June 2013

Date of last patient enrollment: 13 June 2016

Single study site in Denmark.

Pre-assignment

Screening details:

Male or female patients aged 18 to 75 years (inclusive) with severe TBI, who required intensive care unit admission and monitoring of intracranial pressure via a ventricular catheter. Clinical examination with post-resuscitation GCS of 4-8, inclusive.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Ciclosporin 5 mg/kg/day

Arm description:

2.5 mg/kg ciclosporin intravenous bolus dose infusion (given between 10 to 15 minutes) + continuous intravenous infusion of 5 mg/kg/day ciclosporin for 5 days + 3 days monitoring period, followed by 30 days follow-up period.

Arm type	Experimental
Investigational medicinal product name	NeuroSTAT® (ciclosporin)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for infusion
Routes of administration	Intravenous use

Dosage and administration details:

NeuroSTAT® is a sterile intravenous ciclosporin lipid emulsion containing ciclosporin, 5 mg/ml emulsion for infusion. The novel vehicle formulation for ciclosporin is a well-known infusion emulsion, containing e.g. refined soya bean oil and purified structured triglyceride. It is based upon an EU registered and marketed product for parenteral nutrition, manufactured by Fresenius Kabi, Austria (LIPOVENOES® MCT 20%, approved presently in Germany, the Netherlands and Italy).

Dosage: 2.5 mg/kg ciclosporin intravenous bolus dose infusion (given between 10 to 15 minutes) + continuous intravenous infusion of 5 mg/kg/day ciclosporin for 5 days + 3 days monitoring period, followed by 30 days follow-up period.

Arm title	Ciclosporin 10 mg/kg/day
------------------	--------------------------

Arm description:

2.5 mg/kg ciclosporin intravenous bolus dose infusion (given between 10 to 15 minutes) + continuous intravenous infusion of 10 mg/kg/day ciclosporin for 5 days (n=10) + 3 days monitoring period, followed by a 30 days follow-up period.

Arm type	Experimental
Investigational medicinal product name	NeuroSTAT® (ciclosporin)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for infusion
Routes of administration	Intravenous use

Units: Observed values (mmol/L)				
median (full range (min-max))				
Baseline	2.70 (2.1 to 4.6)	4.10 (2.0 to 10.9)		
Treatment Day 1	3.10 (1.5 to 5.2)	3.80 (2.5 to 7.4)		
Treatment Day 2	4.05 (2.5 to 7.4)	5.10 (2.8 to 9.5)		
Treatment Day 3	5.40 (3.3 to 9.0)	8.00 (5.4 to 9.9)		
Treatment Day 4	6.95 (3.8 to 13.1)	11.00 (6.9 to 12.3)		
Treatment Day 5	8.65 (5.3 to 18.1)	11.90 (7.2 to 15.9)		
Monitoring Day 1	9.40 (6.6 to 21.4)	15.95 (7.4 to 24.6)		
Monitoring Day 2	7.40 (4.6 to 16.7)	13.60 (7.2 to 22.6)		
Monitoring Day 3	5.95 (4.3 to 9.4)	10.20 (6.6 to 27.2)		

Statistical analyses

No statistical analyses for this end point

Primary: Clearance

End point title	Clearance ^[11]
-----------------	---------------------------

End point description:

PK parameters were based on ciclosporin levels in blood.

Clearance (CL), primary pharmacokinetic parameter of population pharmacokinetic analysis

End point type	Primary
----------------	---------

End point timeframe:

From start of bolus infusion to end of monitoring period (Day 8).

Notes:

[11] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical analysis for this endpoint. Only summary statistics are presented.

End point values	Ciclosporin 5 mg/kg/day	Ciclosporin 10 mg/kg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	6		
Units: L/h				
arithmetic mean (standard deviation)	24.3 (± 5.82)	24.6 (± 4.52)		

Statistical analyses

No statistical analyses for this end point

Primary: Volume of distribution of the central compartment

End point title	Volume of distribution of the central compartment ^[12]
-----------------	---

End point description:

PK parameters based on ciclosporin levels in blood.

Volume of distribution of the central compartment (V_c), primary pharmacokinetic parameter of population pharmacokinetic analysis.

End point type	Primary
----------------	---------

End point timeframe:

From start of bolus infusion to end of monitoring period (Day 8).

Notes:

[12] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical analysis for this endpoint. Only summary statistics are presented.

End point values	Ciclosporin 5 mg/kg/day	Ciclosporin 10 mg/kg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	6		
Units: Litres				
arithmetic mean (standard deviation)	29.1 (± 46.3)	21.5 (± 7.19)		

Statistical analyses

No statistical analyses for this end point

Primary: The volume of distribution of the peripheral compartments

End point title	The volume of distribution of the peripheral compartments ^[13]
-----------------	---

End point description:

PK parameters based on ciclosporin levels in blood.

Volume of distribution of the peripheral compartment (Vp), primary pharmacokinetic parameter of population pharmacokinetic analysis.

Vp1 is the first peripheral volume of distribution, Vp2 is the second peripheral volume of distribution

End point type	Primary
----------------	---------

End point timeframe:

From start of bolus infusion to end of monitoring period (Day 8).

Notes:

[13] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical analysis for this endpoint. Only summary statistics are presented.

End point values	Ciclosporin 5 mg/kg/day	Ciclosporin 10 mg/kg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	6		
Units: Litres				
arithmetic mean (standard deviation)				
Vp1	46.9 (± 7.65)	50.5 (± 5.68)		
Vp2	373 (± 81.1)	398 (± 66.2)		

Statistical analyses

No statistical analyses for this end point

Primary: Mean concentration at steady state

End point title	Mean concentration at steady state ^[14]
-----------------	--

End point description:

PK parameters based on ciclosporin levels in blood.

Mean concentration at steady state

$C_{av,ss} = \text{Dose rate} / CL$

End point type	Primary
----------------	---------

End point timeframe:

From start of bolus infusion to end of monitoring period (Day 8).

Notes:

[14] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical analysis for this endpoint. Only summary statistics are presented.

End point values	Ciclosporin 5 mg/kg/day	Ciclosporin 10 mg/kg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	6		
Units: ng/mL				
arithmetic mean (standard deviation)	665 (± 117)	1320 (± 279)		

Statistical analyses

No statistical analyses for this end point

Primary: The observed maximum plasma concentration after single dose administration

End point title	The observed maximum plasma concentration after single dose administration ^[15]
-----------------	--

End point description:

PK parameters based on ciclosporin levels in blood:

The observed maximum plasma concentration (C_{max}) after single dose administration.

End point type	Primary
----------------	---------

End point timeframe:

From start of bolus infusion to end of monitoring period (Day 8).

Notes:

[15] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical analysis for this endpoint. Only summary statistics are presented.

End point values	Ciclosporin 5 mg/kg/day	Ciclosporin 10 mg/kg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	6		
Units: ng/mL				
arithmetic mean (standard deviation)	4420 (± 2350)	4930 (± 511)		

Statistical analyses

No statistical analyses for this end point

Primary: The time to reach C_{max}

End point title	The time to reach C _{max} ^[16]
-----------------	--

End point description:

PK parameters based on ciclosporin levels in blood:

T_{max}, the time to reach C_{max}.

End point type	Primary

Reporting groups

Reporting group title	Ciclosporin 5 mg/kg/day
-----------------------	-------------------------

Reporting group description:

2.5 mg/kg ciclosporin intravenous bolus dose infusion (given between 10 to 15 minutes) + continuous intravenous infusion of 5 mg/kg/day ciclosporin for 5 days + 3 days monitoring period, followed by 30 days follow-up period.

Reporting group title	Ciclosporin 10 mg/kg/day
-----------------------	--------------------------

Reporting group description:

2.5 mg/kg ciclosporin intravenous bolus dose infusion (given between 10 to 15 minutes) + continuous intravenous infusion of 10 mg/kg/day ciclosporin for 5 days (n=10) + 3 days monitoring period, followed by a 30 days follow-up period.

Serious adverse events	Ciclosporin 5 mg/kg/day	Ciclosporin 10 mg/kg/day	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 10 (0.00%)	1 / 6 (16.67%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Renal and urinary disorders			
Renal tubular necrosis			
subjects affected / exposed	0 / 10 (0.00%)	1 / 6 (16.67%)	
occurrences causally related to treatment / all	0 / 0	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Ciclosporin 5 mg/kg/day	Ciclosporin 10 mg/kg/day	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	10 / 10 (100.00%)	6 / 6 (100.00%)	
Investigations			
Amylase increased			

subjects affected / exposed	1 / 10 (10.00%)	1 / 6 (16.67%)
occurrences (all)	1	1
Blood albumin decreased		
subjects affected / exposed	1 / 10 (10.00%)	0 / 6 (0.00%)
occurrences (all)	1	0
Blood creatinine abnormal		
subjects affected / exposed	1 / 10 (10.00%)	0 / 6 (0.00%)
occurrences (all)	1	0
Blood creatinine increased		
subjects affected / exposed	1 / 10 (10.00%)	2 / 6 (33.33%)
occurrences (all)	1	2
Blood magnesium decreased		
subjects affected / exposed	2 / 10 (20.00%)	1 / 6 (16.67%)
occurrences (all)	2	1
Blood phosphorus decreased		
subjects affected / exposed	4 / 10 (40.00%)	3 / 6 (50.00%)
occurrences (all)	4	3
Blood potassium increased		
subjects affected / exposed	1 / 10 (10.00%)	1 / 6 (16.67%)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 November 2013	Change in inclusion criterion no 4: requirement to conduct a wake-up call to assess GCS score was removed.
28 August 2014	Change in inclusion criterion no 5 and change in study assessments.
24 September 2015	Change in inclusion criterion no 1, upper age limited increased from 65 to 75 years. Addition of exclusion criterion no 15.
25 January 2016	Microdialysis measurements of metabolic biomarkers and brain tissue oxygen measurements were made optional.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

It had been planned to include ten patients in the higher dose group but the study was prematurely closed due to slow recruitment.

Notes:
